

Tools for Hi-Fi Prototyping and Web Design

CS 147

November 6, 2006

Macromedia Flash

Interactive Vector
Graphics, Line
Drawing, and
Animation

Basics

- Flash was created as an animation tool, but works quite well for hi-fi prototypes
- Everything follows an animation metaphor
 - A “stage,” frames and key frames, motion tweening...
- ActionScript used for programming

Drawing in Flash

- Comes with an extensive set of drawing tools
- Can aggregate drawings into Symbols and Movie Clips
 - These are the bread and butter of interactive elements
- Layers (a la Photoshop)

To Make Something Move

- Create a layer for the object

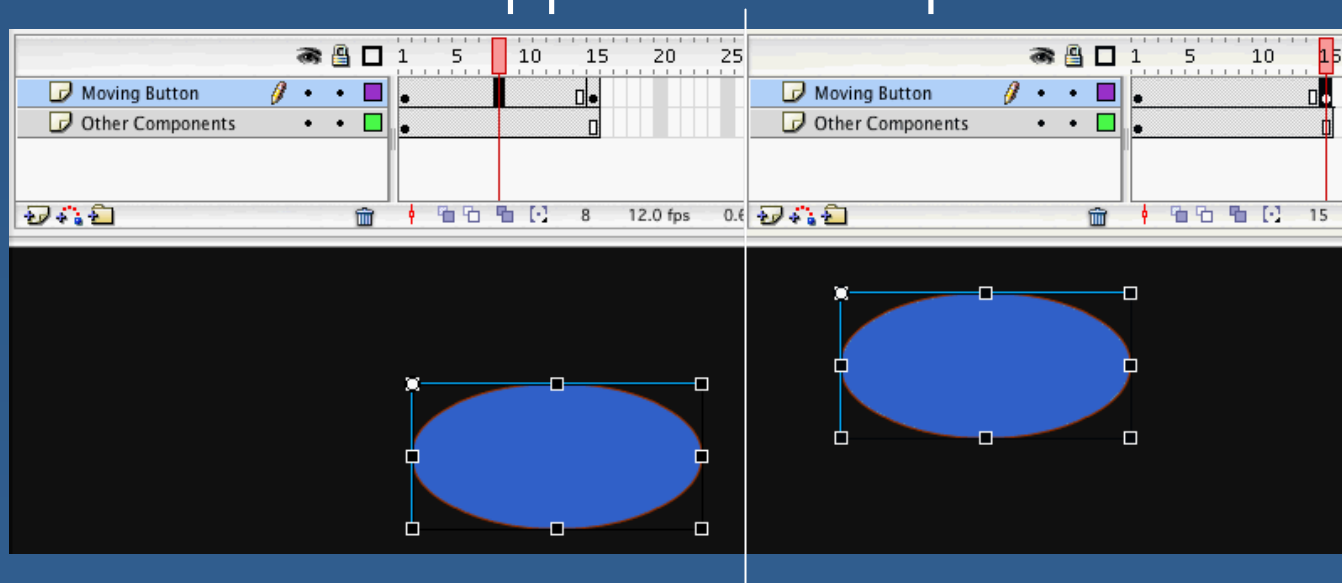

- Add a keyframe at the time when you would like the object to begin and finish its movements

To Make Something Move

- Select each keyframe and move the object to where it should appear at that point

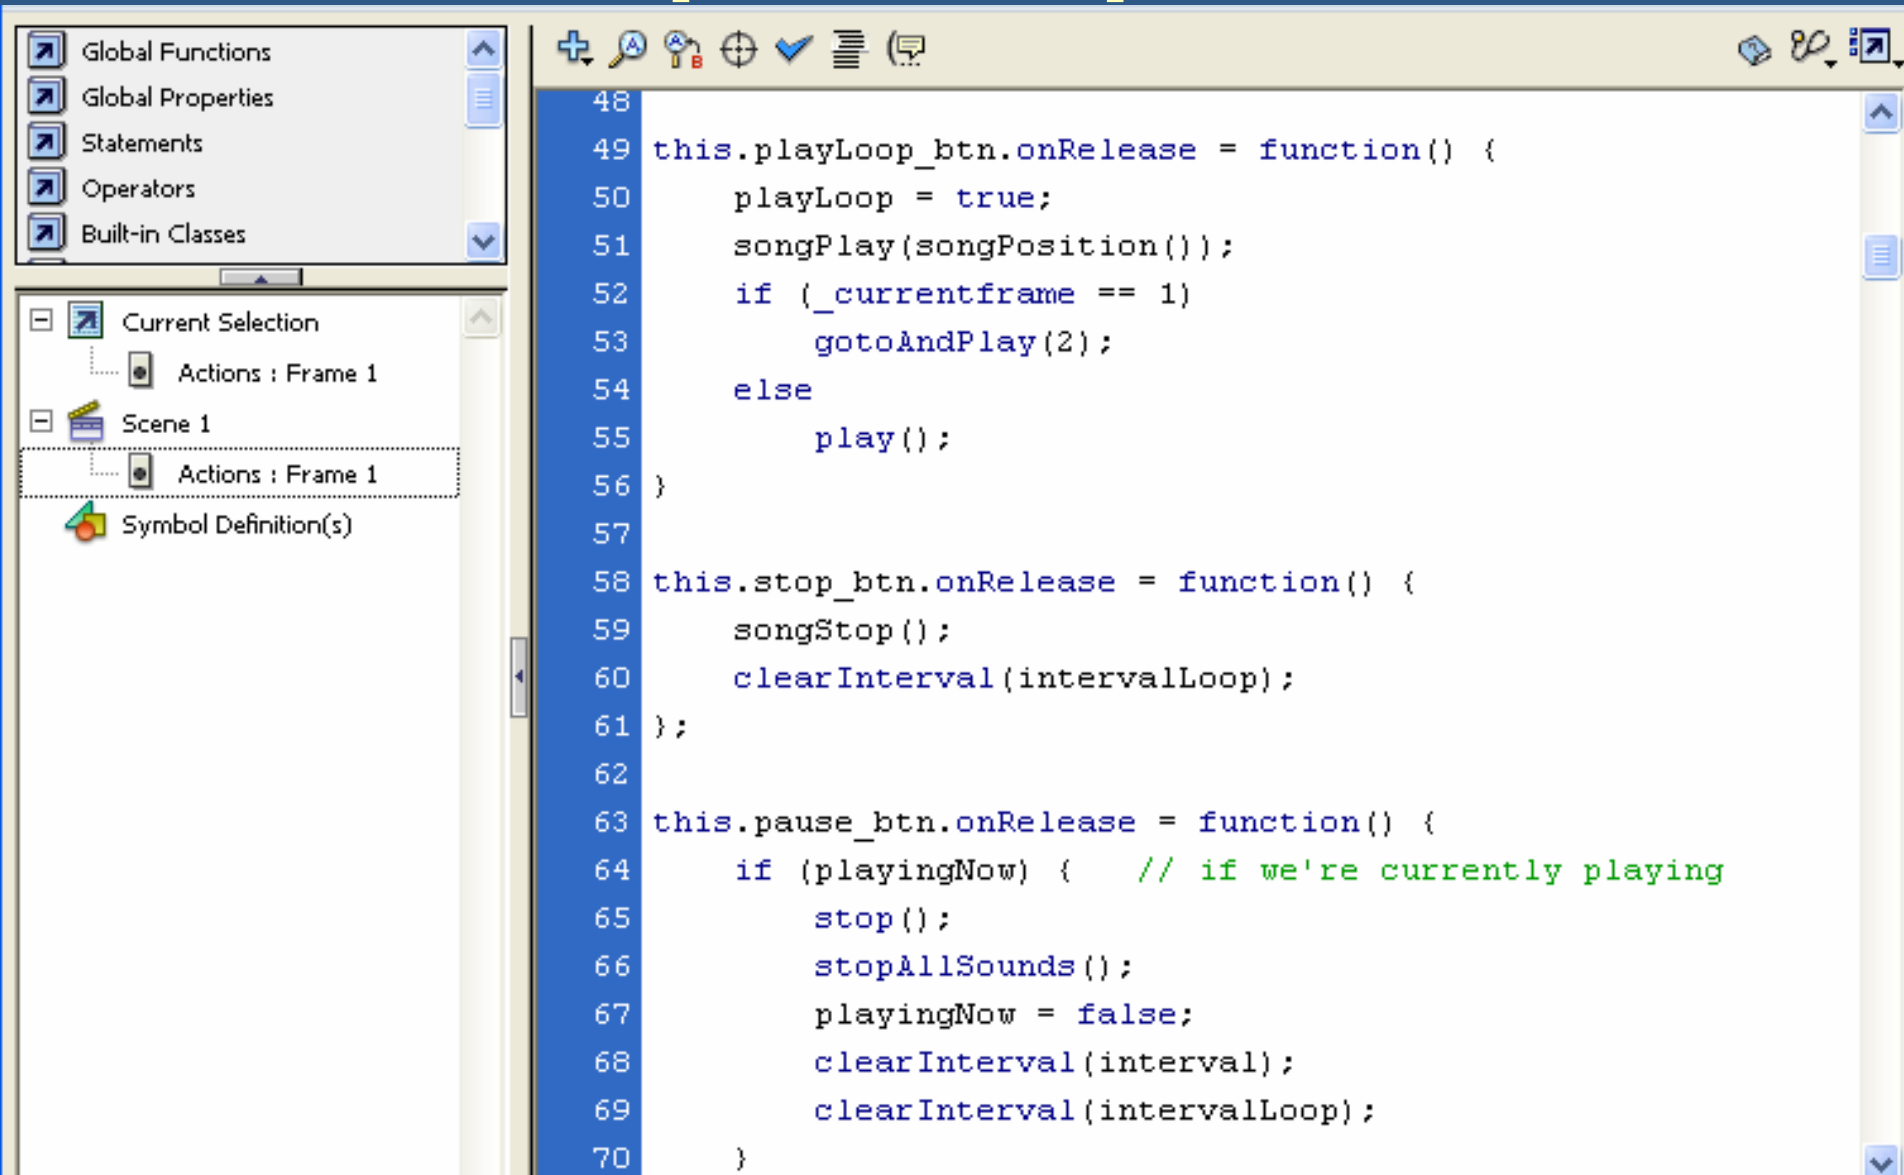

- Tell it to Motion Tween

ActionScript

- Adds interactive functionality to your project
- Variant of Javascript
 - Untyped variables (type 'var')
 - Silent errors – no indication you've screwed up
 - Large library of built-in functions
 - Sounds
 - Movie Clips
 - Animation
 - Math, Geometry, etc.
- Good style: Always put code in a separate "Action" layer, in frame 0

ActionScript Example

The screenshot shows an IDE interface with a left-hand sidebar and a main code editor. The sidebar contains a 'Global Functions' panel and a 'Current Selection' panel. The 'Current Selection' panel shows a tree view with 'Actions : Frame 1' selected under 'Scene 1'. The main code editor displays the following ActionScript code:

```
48
49 this.playLoop_btn.onRelease = function() {
50     playLoop = true;
51     songPlay(songPosition());
52     if (_currentframe == 1)
53         gotoAndPlay(2);
54     else
55         play();
56 }
57
58 this.stop_btn.onRelease = function() {
59     songStop();
60     clearInterval(intervalLoop);
61 };
62
63 this.pause_btn.onRelease = function() {
64     if (playingNow) { // if we're currently playing
65         stop();
66         stopAllSounds();
67         playingNow = false;
68         clearInterval(interval);
69         clearInterval(intervalLoop);
70     }
```

Project Examples

- [Interactive Academic Planner](#)
- [Tone Deaf Revolution](#)
- [Chef--](#)
- [FEEDBack](#)
- [TeamShare](#)

When to Use Flash

- Front-end looks are what you care about
 - Computational needs are somewhat minor
- Your product is an “interactive movie”
 - Potentially involves symbols that move or animate in response to users’ actions
 - Contains many screens
- You’re looking to craft an interface that would be difficult to create using most typical interface builders like Java Swing

Flash Resources

- Online Tutorials

http://www.macromedia.com/support/flash/tutorial_index.html

- Ron & Bjoern's Flash MX Tutorial:

<http://cs147.stanford.edu/flashmx>

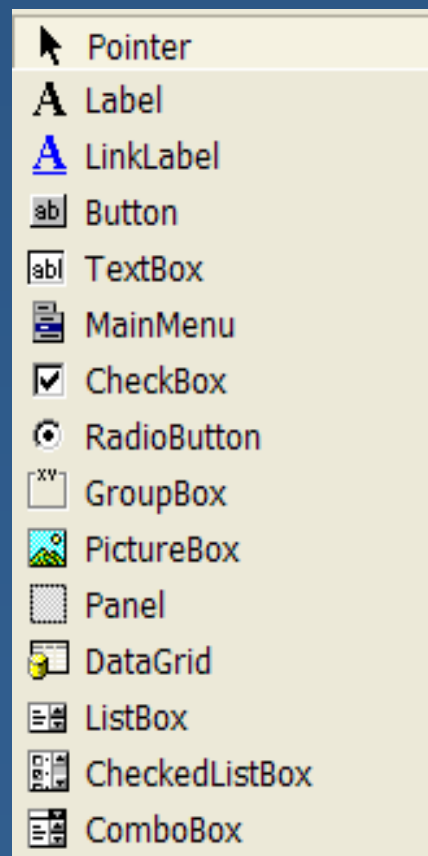

Microsoft Visual Basic

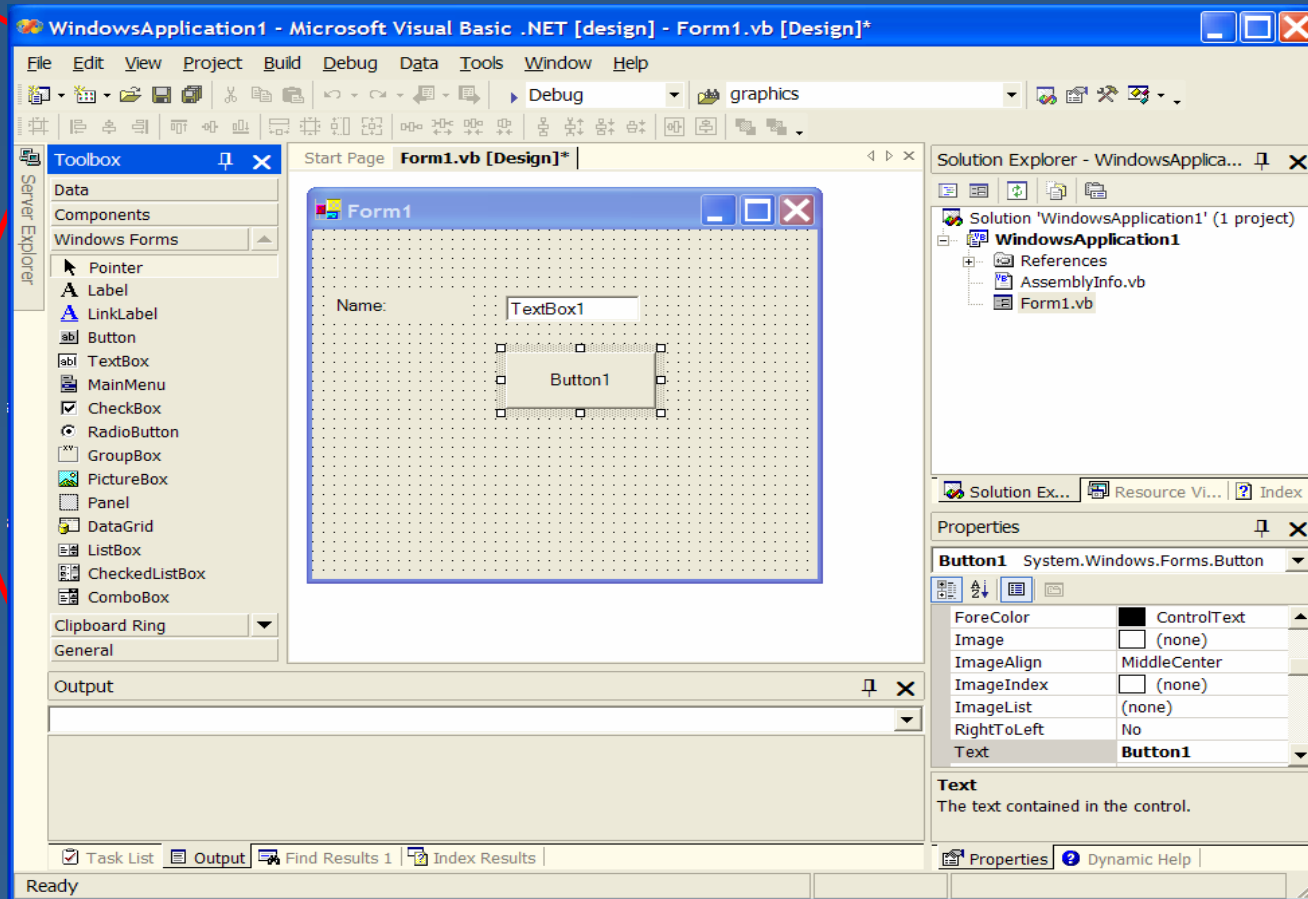

A Graphical
Programming
Environment and UI
Designer

What is Visual Basic?

- Programming environment based on the BASIC language
- One of the first languages to include a visual interface editor that behaves similar to a paint program

VB Screenshot

Toolbox

property
page

VB Basics

- Without worrying about syntax details, VB programmers can add a substantial amount of code by dragging and dropping controls, such as buttons and dialog boxes, and then defining their appearance and behavior
- Event-driven: each object can react to different events, such as a mouse click or key press, with custom event handling code

VB Basics

- Each VB project has two components, form and associated code. The form defines the layout of the widgets, and the code describes how they behave.
- Double-clicking on a widget brings you to the code specifying the behavior of that widget that runs in response to each event that it can trigger.

Pros and Cons

- + A full programming language, better than Flash for tasks involving real computation
- + Large library of built-in interface widgets
- + Easy to get started compared to Java or C++
- Prototype won't run on the web (compiles to a Windows executable)
- Not as easy to do animation and interactive graphics
- Standard widgets mean less flexibility in design: your prototype will look like every other Windows application

Project Examples

- Teacher Organizer
- Physician Order Entry

When to Use VB

- Your application uses fairly standard interface widgets (buttons, sliders, scroll bars, combo boxes)
- Your system requires some back-end computation for which Flash is ill-suited
- You want to build a “real” Windows application that Windows users can download and install

VB Resources

- Online tutorial for beginners:
<http://www.vbtutor.net/>
- Lots of good VB examples with source code:
http://pages.cpsc.ucalgary.ca/~saul/vb_examples/

Web Programming

Client and Server
Side Solutions for
Interactive Web
Content

Ways to Make Web Pages

Interactive

- Client-side technologies: DHTML using Javascript, DOM
- Server-side technologies: PHP, CGI scripting (Perl/Python), database integration (mySQL), Java servlets, ASP/VBScript

“Plain” HTML

- A simple mark-up language used to create web documents
- HTML is not a programming language; no built-in interactivity
- CSS (Cascading Style Sheets) can be used with HTML to create formatting for Web pages

Dynamic HTML (DHTML)

- A group of technologies used to create interactivity on web pages, such as changes that occur from mouse actions
- The DOM (Document Object Model) interface used in modern browsers allows programs and scripts to dynamically access and update the content, structure and style of documents; results of processing can then be incorporated back into the presented page

Javascript

- A scripting language, originally created by Netscape, that can be embedded into the HTML of a web page to add interactivity
- Simplified, less structured version of Java
- Can interact with HTML, changing page dynamically in response to user input
- Timers, event handlers, form validation, animation, etc.

CGI (Common Gateway Interface) Scripts

- Small programs written in a language like Perl (most common), Python, C or C++
- Allow processing of form input, and connect HTML pages to other programs on the Web server; can be used to dynamically generate web pages in response to input
- For example, a CGI script could allow search data entered on a Web page to be sent to a database for lookup, and generate a response page of search results
- CGI script resides on the server and obtains data from the user via environment variables that the Web server makes available to it

PHP: a Hypertext “Preprocessor”

- A server-side, cross-platform, HTML embedded scripting language
- Lets you create dynamic web pages by embedding code directly into your HTML document
- When the server receives a request for a PHP document, it first runs the PHP code in the document, and then delivers the document to the client
- You can create and edit PHP documents the same way you normally create regular HTML pages

Web Programming Pros and Cons

- + Easy to get lots of users to test your application
- + Initial layout can be done in HTML, which you are probably already familiar with
- + Useful to learn, since more and more programs are becoming web-based
- Web was not initially designed to be interactive, so programming web pages for interactivity can be awkward
- Very limited collection of standard “widgets”
- Difficult to do animation
- There are still problems with compatibility across browsers and operating systems

When to build for the web

- Your proposed system is intended to be run on the web
- You want to test community-based features and need to recruit a large user community
- You want to integrate your system with a database

Web Project Examples

- [iMenu](#)
- [MyStanford](#)
- [BetterBiking](#)
- [WhereToBe](#)
- [MedTrax](#)

Web Programming Resources

- Javascript tutorial:
<http://www.w3schools.com/js/default.asp>

Java and Eclipse

Full-featured
Programming
Language and IDE

Java Swing

First Name	Last Name	Favorite Food
Jeff	Dinkins	
Ewan	Dinkins	
Amy	Fowler	
Hania	Gajewska	
David	Geary	

Pros and Cons

- + Your app will use the standard widgets
- Your app will use the standard widgets (hard to make something that doesn't just look like a standard application). Flash might be better in this case.
- Easy to get sucked into coding non-interface things (hooking it up to databases, etc...). We don't want you to do this.

Eclipse

Should have seen this before CS 147. If not...

If you are coding in Java, we highly recommend using Eclipse (<http://eclipse.org>)

Many useful features

- Ctrl-1 (to suggest fixes for broken code)
- Ctrl-Space (intelligent auto-complete)
- For more productivity tips:
<http://www.javaworld.com/javaworld/jw-08-2005/jw-0829-eclipse.html>

Using Swing

Online documentation for UI code:

<http://java.sun.com/docs/books/tutorial/uiswing/index.html>

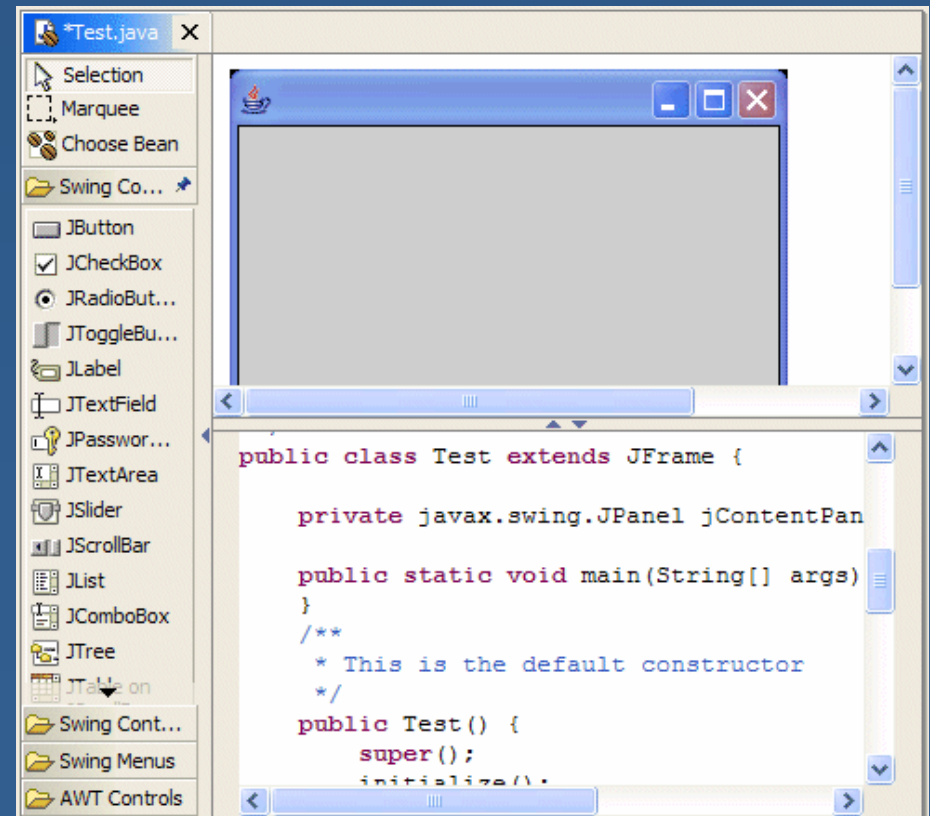

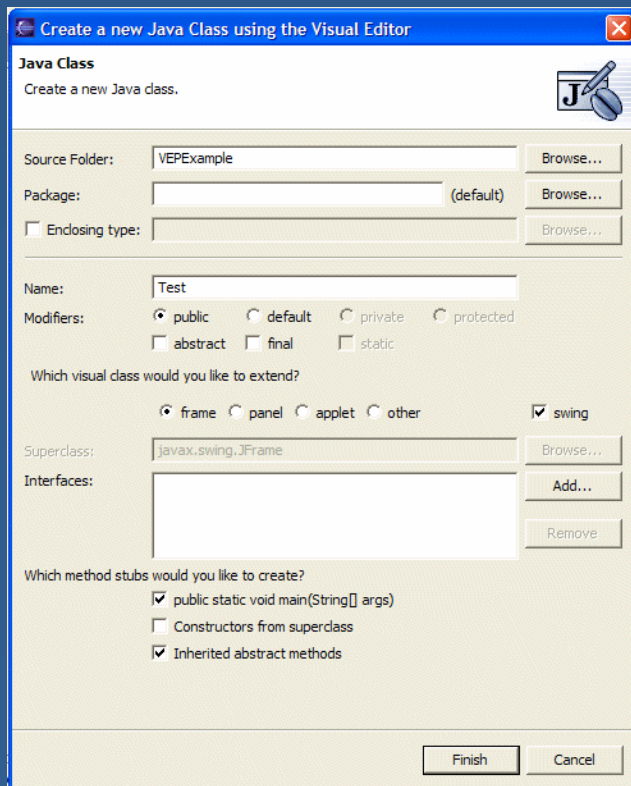

Eclipse has a Visual Editor (installed separately) which allows you to drag and drop GUI elements, but we don't think it is that useful.

If you are really interested:

<http://www-128.ibm.com/developerworks/library/os-ecvisual/>

Eclipse Visual Editor

Again, you have to understand something about writing GUI code even make sense of the visual editor (so we don't recommend it)...

Java Examples

- [N](#)
- [The Familiar: A Magic Deckbuilding Aid](#)
- [DigitalNotes](#)
- [SleepSoft](#)

Mobile Phone Programming

J2ME and BREW

Mobile Programming

Pros and Cons

- Pros

- Realistic look and feel
- Phone interface built-in to the emulator
- Familiar programming languages (Java or C++)

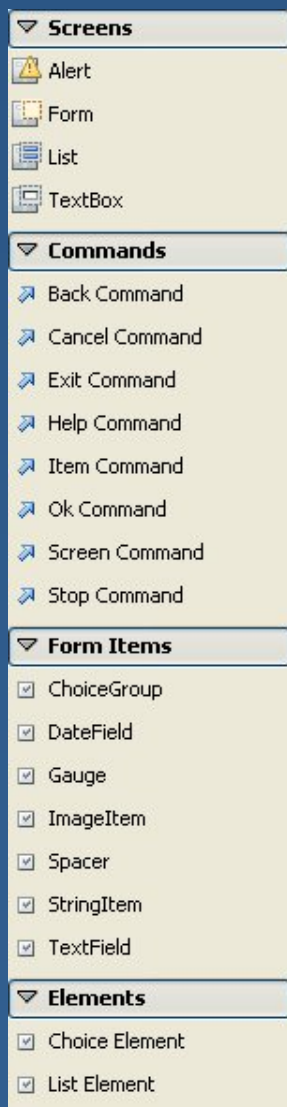

- Cons

- May be too much depth and capabilities
- Can get bogged down in backend programming
- New API to learn

J2ME vs. Brew

- Java-based
 - Download Netbeans or Eclipse; JRE SDK; Netbeans Mobility Pack; and J2ME Wireless Toolkit
 - Information: <http://java.sun.com/j2me/index.jsp>
 - Download: <http://www.eclipse.org/> or <http://www.netbeans.org/>
- C/C++ natively
 - Supports Java and XML
 - Supported on QUALCOMM CDMA
 - Information: <http://brew.qualcomm.com/>
 - Download: <https://brewx.qualcomm.com/brew/sdk/download.jsp?page=dx/3.1>

Netbeans Visual Designer

- Screens
 - The different types of screens available to use
- Commands
 - Correspond to the two “special function” buttons on your phone
 - Can be applied to the entire form
 - Can be applied to individual form items such that the command is only visible when that form item is selected
- Form Items
 - The various UI controls available in J2ME
- Elements
 - Choice and list elements correspond to the ChoiceGroup form item
 - To make a radio button, you need to insert elements into a ChoiceGroup

Example screen items

- Form title
- String item
- Spacer
- DateField
- ChoiceGroup
- ChoiceElements
- Commands

History of Web Development

Learning Goals

- Be familiar with the kinds of interactive techniques that have been and can be used on the web
- Know the different technologies that are used for web development
- Understand how the basic principles of interaction design are applied in real-world web design

A Brief History of Web Interfaces

- Protocols
 - There is a stack of layers from low level (close to the machine) to higher (closer to user purposes)
- Formats
 - Readability vs. efficiency
 - Open vs. proprietary
- Tools

Arpanet (1968)

- Goals
 - Remote use of computers
 - Robustness in face of computer and communications failures
 - Decentralized architecture
 - End-to-end reliability
- Unexpected major uses
 - Human-to-human communication
 - Commerce

The Internet (1982)

- Formats
 - Domain names (e.g., `hci.stanford.edu`)
 - Email message format
 - ...
- Internet Protocols
 - IP/TCP: Internet Protocol / Transmission Control Protocol
 - FTP: File Transmission Protocol
 - SMTP: Simple Mail Transmission Protocol
 - ...
- Later Research Protocols at a Higher Layer
 - Gopher
 - WAIS: Wide Area Information Server
 - ...

SMTP Protocol Example

```
S: 220 www.example.com ESMTP Postfix
C: HELO mydomain.com
S: 250 Hello mydomain.com
C: MAIL FROM: <sender@mydomain.com>
S: 250 Ok
C: RCPT TO: <friend@example.com>
S: 250 Ok
C: DATA S: 354 End data with <CR><LF>.<CR><LF>
C: Subject: test message
C: From: sender@mydomain.com
C: To: friend@example.com
C:
C: Hello,
C: This is a test.
C: Goodbye.
C: .
S: 250 Ok: queued as 12345
C: QUIT
S: 221 Bye
```

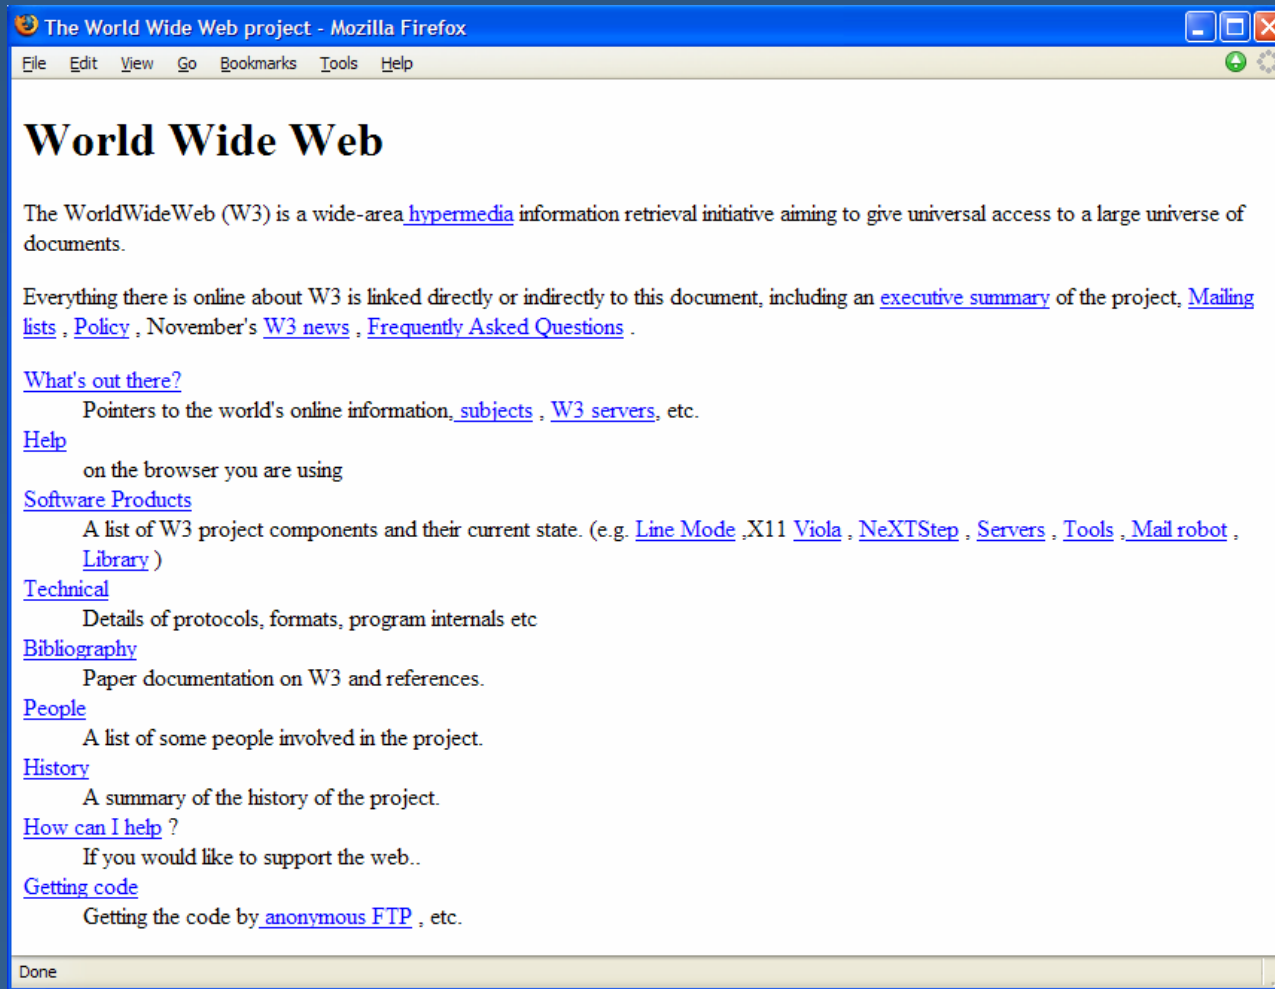

Precursors of the World-Wide Web

- Hypertext in general
 - Proposed by Vannevar Bush in 1945, implemented by Engelbart and others in the 60s
- Hypertext with images and actions
 - Hypercard, 1987
- Internet addressing
 - Domain and mail addresses from Internet Standards
- Markup Languages
 - SGML: Standard Generalized Markup Language (for documents), started in the 1970s
- Stateless protocols
 - Server doesn't need to keep track of multiple clients

Basic Hypertext Web (Berners-Lee, 1991)

- Formats:
 - URL: Uniform Resource Locator (or Universal Resource Locator)
 - How you identify an object anywhere on the web
 - E.g.,
“`ftp://hci.stanford.edu/documents/slides.gif`”
 - HTML: Hypertext Markup Language
 - How you specify what you want to appear on the page
- Protocols:
 - HTTP: Hypertext Transport Protocol
 - Stateless communication between browser and server
 - Basic model is sending independent “pages”
 - Requests, responses, status codes,...
 - E.g., “HTTP/1.0 404 Object Not Found”
- Browsers and Servers

The First Known Web Page

HTML Format

```
<HTML>
<HEAD>
<TITLE>SGML METADATA FORMAT</TITLE>
<meta HTTP-EQUIV="Content-Type" content="text/html; charset=ISO-8859-1">
<meta name="DC.Description" content="">
<meta name="Keywords" content="">
</HEAD>
<BODY BGCOLOR="#FFFFFF">
<H1><CENTER>ANZLIC Metadata - SGML Format</CENTER>
</H1>
<H2>What is SGML?
</H2>
<P>
<A HREF="http://www.sgmlopen.org">Standard Generalized Markup Language</A>,
also known as SGML, became an International Organisation for Standardisation
(ISO) standard in 1985. It is used to define the structure of
electronic text files or documents. It is concerned primarily
with structure and not with the content of the document. <BR>
<P>
It consists of text contained within a series of
fields called elements which are defined by markup tags at the
beginning and end of each field. These tags are contained within
triangular brackets, < >. The beginning and ending tag contain
the same name however the ending tag name is preceded by a forward
slash, /. <BR>
<P>
SGML is designed primarily for defining the structure
of electronic documents and not for direct viewing by the user.
But if you did look at an SGML file, what would it look like?
Below is an example of an extract from an SGML document:<BR>
<P>
  < ></FONT>
```

Lynx Text-based Browser

Adding Images: Mosaic (1993)

Beyond Read-only (1995)

- Server-side scripting
- Standard form elements
 - Text
 - Checkbox
 - Radio button
 - Pull-down list
- WYSYWIG Web editors
- Browser plug-ins

WYSIWIG HTML Editing (Dreamweaver, FrontPage)

Getting Interactive

- Java Applets
 - Run as an independent program, inside the browser
 - Not connected to the rest of the HTML, etc.
- Javascript (not related to the Java language!)
 - Programs that run in your browser between contacts with a server (Client-side scripting)
 - Event/object-driven language (like HyperTalk, 1987, and others)
- DHTML: Dynamic HTML
 - DOM: Document Object Model
 - Uniform way to access and modify elements of the document and display
 - Separation of model from presentation
 - CSS: Cascading Style Sheets: Presentation specification through hierarchy of templates and classes

Getting More Interactive – RIA: Rich Internet Applications

- Director / Flash
 - Proprietary standards and mechanisms for interactive and animated content
- AJAX: Asynchronous Javascript and XML
 - Style of programming that combines advantages of server and client side processing
 - Used to develop
- XML: Extensible Markup Language
 - Standard way to easily handle content formats
- XUL: XML User Interface Language
 - Provides programming control over Firefox browser elements

Issues in Bringing Interactivity to the Web

- Latency - Time to get the next action done
 - Page loading time can be slow and/or unpredictable
 - Bandwidth limitations slow down large transfers
- Directness - Operating on the object
 - e.g., drag and drop
- State management - Keeping context across sessions
 - Cookies and logins
- Compatibility
 - What is usable across browsers and OS platforms?
- Security - Protecting you from bad guys
 - What can a web site do to your browser and the rest of your machine?
 - Sandboxing
 - How can information be protected from interception
 - Secure HTML, HTTP, etc.

Designing for the Web: An Introduction

Material based on James Landay, Jason Hong, and Scott Klemmer's UC Berkeley continuing education course "User Interface Design, Prototyping, and Evaluation"

Good Website Design Matters

- NY Times, Aug 30 1999, on IBM Web site
 - “Most popular feature was ...search ...because people couldn't figure out how to navigate the site“
 - “The second most popular feature was the help button, because the search technology was so ineffective.”
- After redesign:
 - use of the "help" button decreased 84 percent
 - sales increased 400 percent

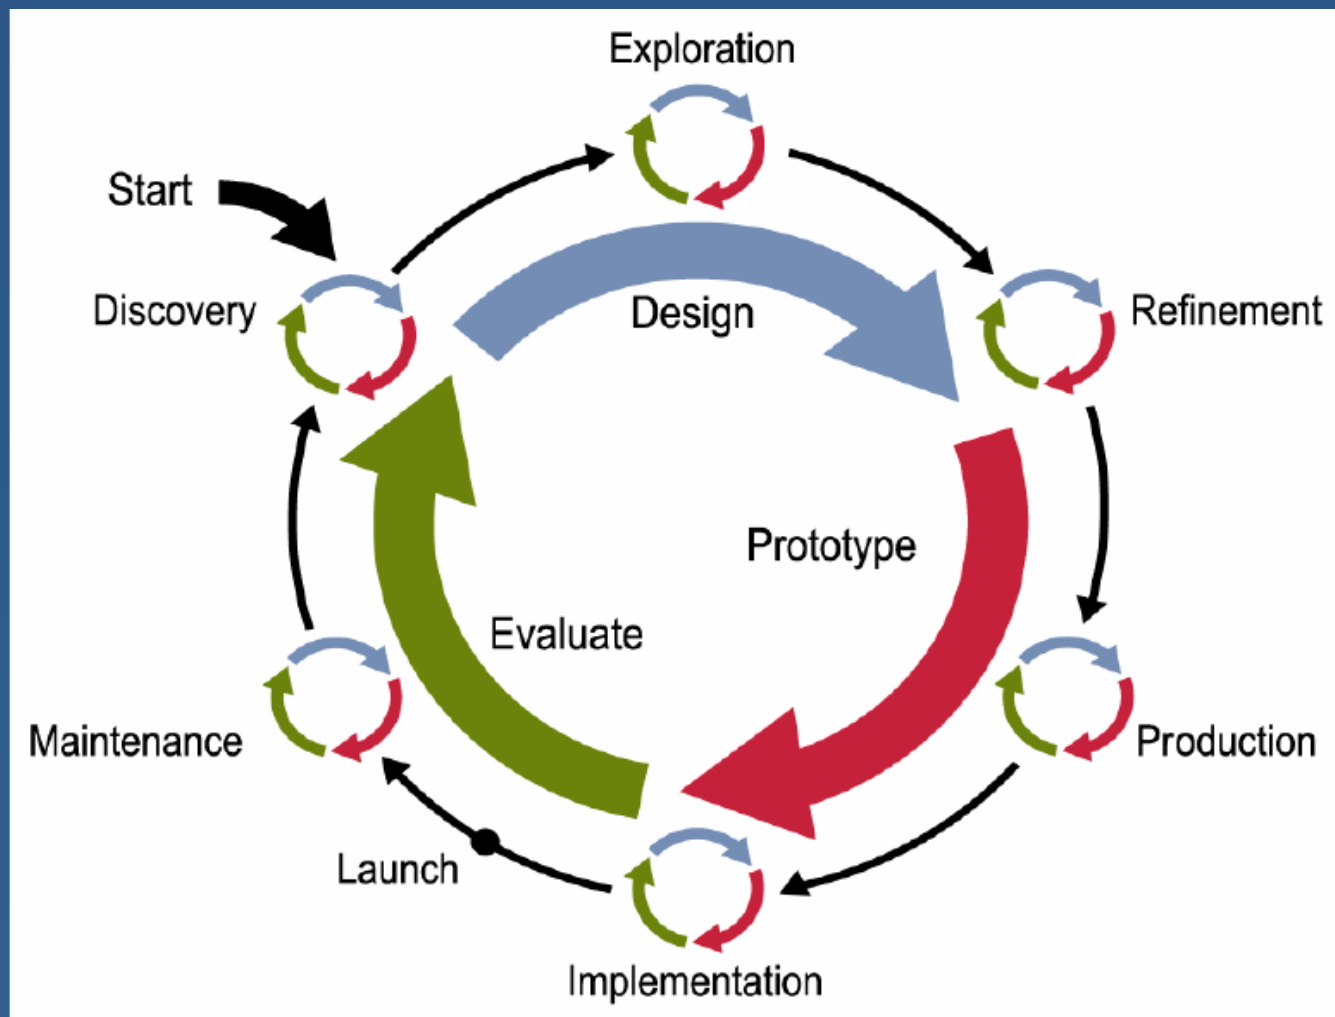

Web Design Specialties

- Graphic Design (Visual Design)
 - Visual communication of information using elements such as color, images, typography, and layout.
 - Page-oriented
- Information architecture
 - Information design
 - identifying groups of related content and structuring information into a coherent whole.
 - Navigation design
 - the design of methods of finding one's way around the information structure
 - Site oriented

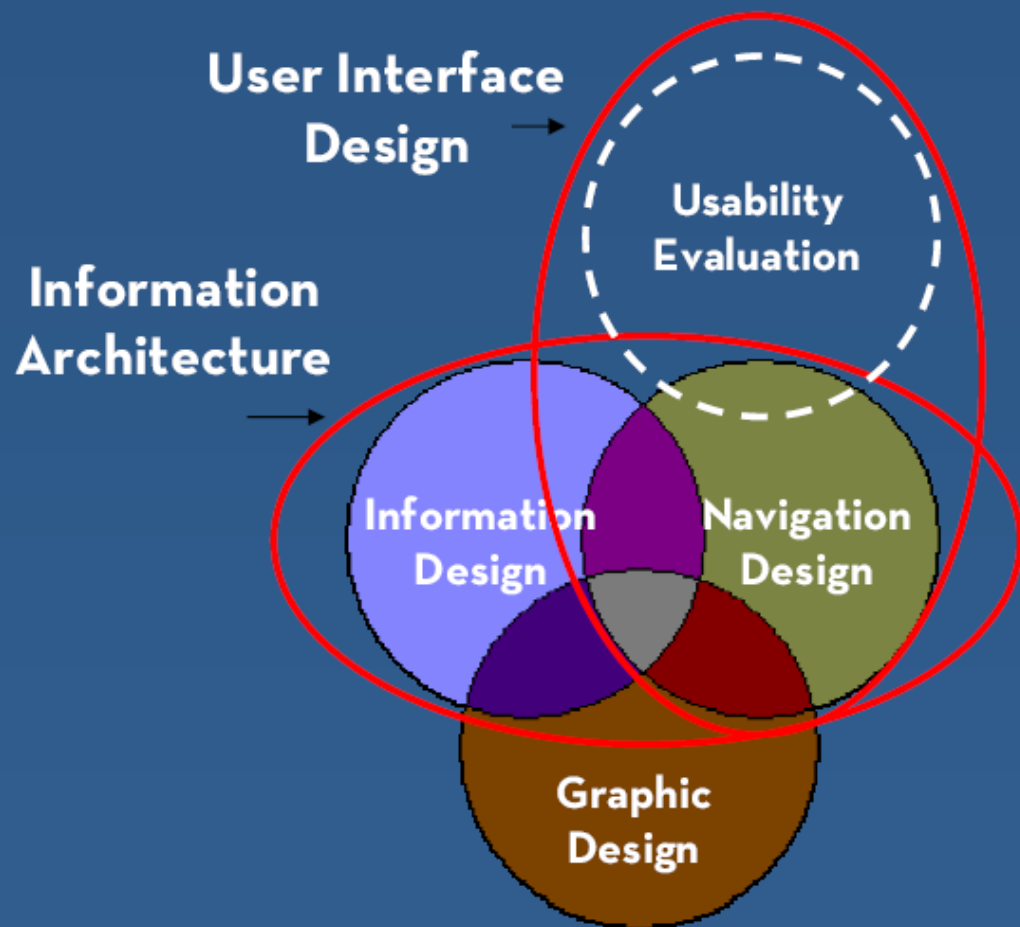

Outline

- Web Design Process, Specialties & Artifacts
- Detailed Design Example
- Web Design Patterns

Web Design Process

Design Specialties

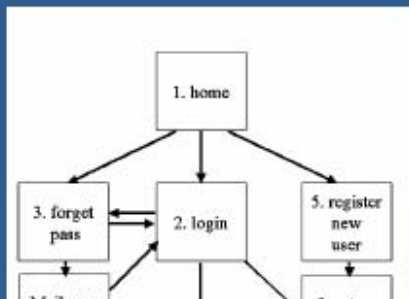

- Information Architecture
 - encompasses information & navigation design
- User Interface Design
 - also includes testing & evaluation

Artifacts of Design Process

- Designers create representations of sites at *multiple levels of detail*
- Web sites are iteratively refined at all levels of detail

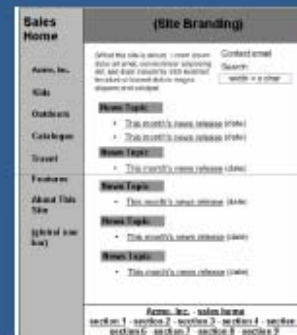

Site Maps

Storyboards

Schematics

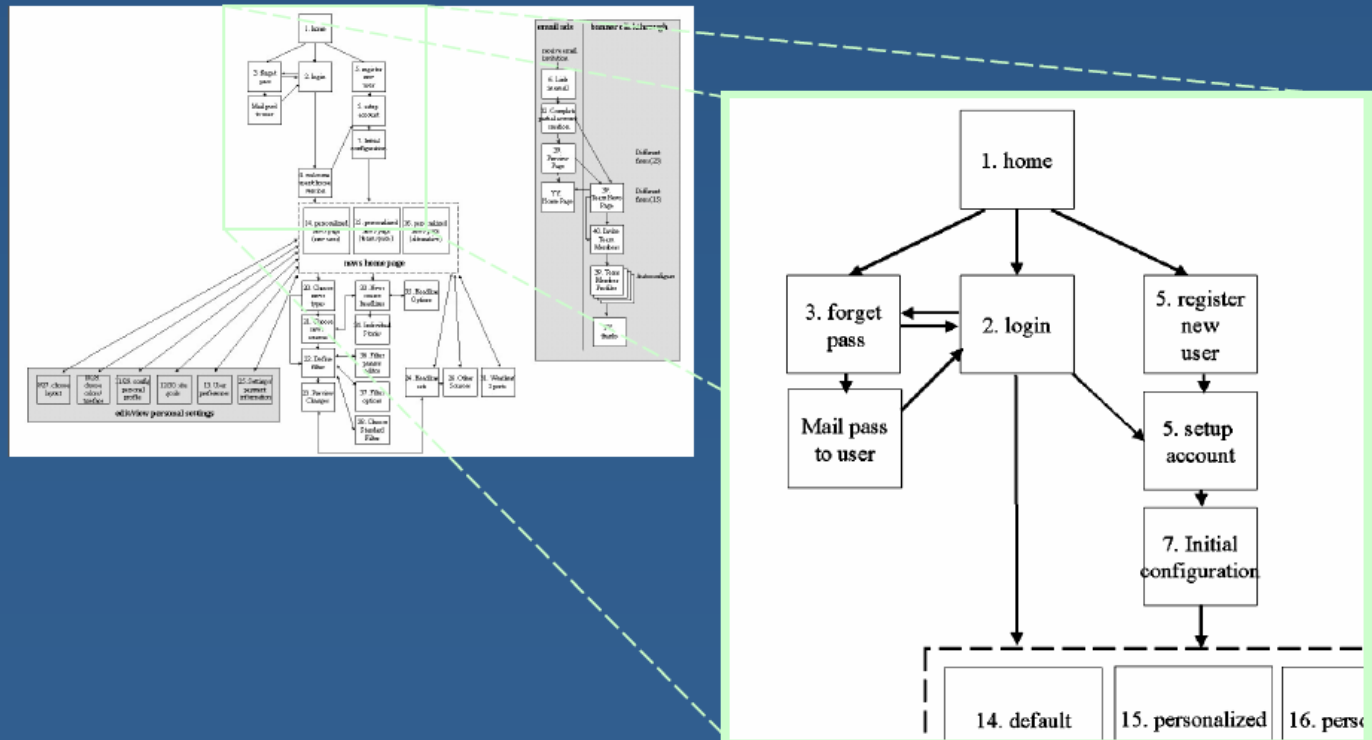

Mock-ups

Site Maps

- High-level, coarse-grained view of entire site

Storyboards

- Interaction sequence, minimal page level details

Schematics

- Page structure with respect to information & navigation

Mock-ups

- High-fidelity, precise representation of page

- Still more info below...

Album Notes

Weezer: Rivers Cuomo (vocals, guitar); Brian Bell (guitar); Matt Sharp (bass); Patrick Wilson (drums). Recorded at Cello Studios, Los Angeles, California in December 2000. In 1994 Weezer burst onto the music scene, reaching platinum status with their debut, and in the process proving that there was still room in an airbrushed MTV world for unrepentant power pop played by decidedly non-airbrushed guys. Following a brief sojourn into semi-deconstructionism, 1997's PINKERTON, the four men who make up Weezer serve up a third offering, WEEZER 2001, returning to the sound and producer of their successful debut. Nowhere does producer Ric Ocasek define his trademark refined power pop style more than with Weezer. Unlike the immediate, obvious pop hooks of the string of singles on the first album, though, the songs on WEEZER 2001 may take a few listens to settle in. However, once the subtle-yet-undeniable refrains of such tracks as "Crab," "Don't Let Go," and first single "Hash Pipe" make their way into your skull, they're there to stay, as furious, fuzzy, layered guitars compliment Rivers Cuomo's raw, vulnerable vocals. While this disc clocks in at less than a half-hour long, it packs more hooky wallop than many double live albums.

Product Reviews**Editorial Reviews****Spin (01/01/2002)**

Outline

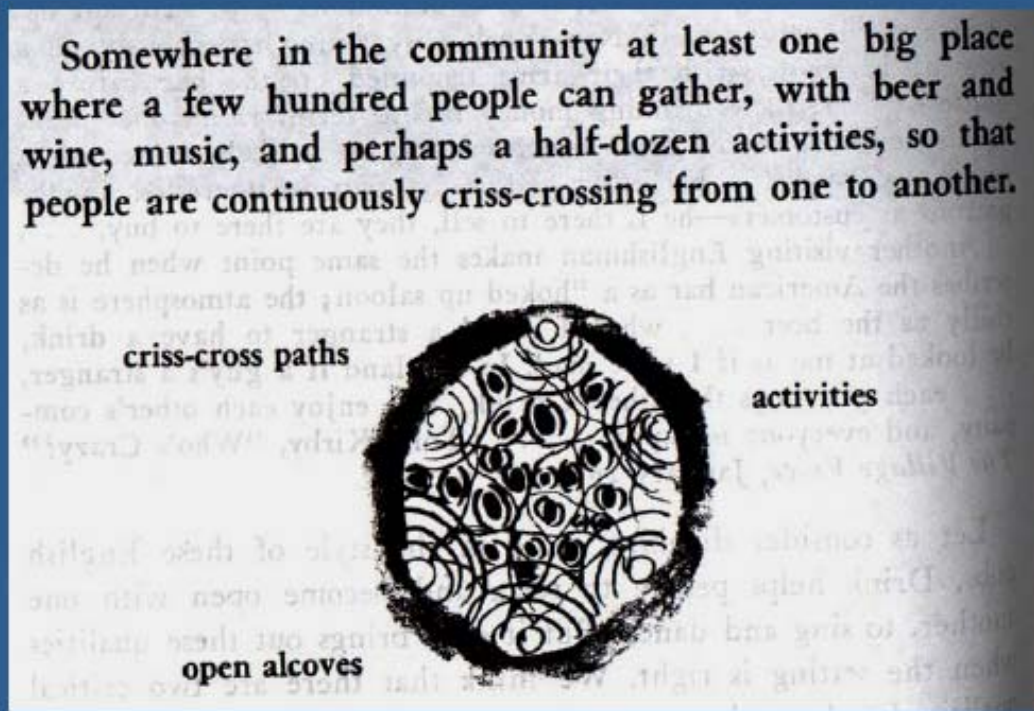

- Web Design Process, Specialties & Artifacts
- Detailed Design Example
- *Web Design Patterns*

Design = Solutions

- Design is about finding solutions
- Unfortunately, designers often reinvent
 - Hard to know *how* things were done before
 - *Why* things were done a certain way
 - *How* to reuse solutions

Design Patterns

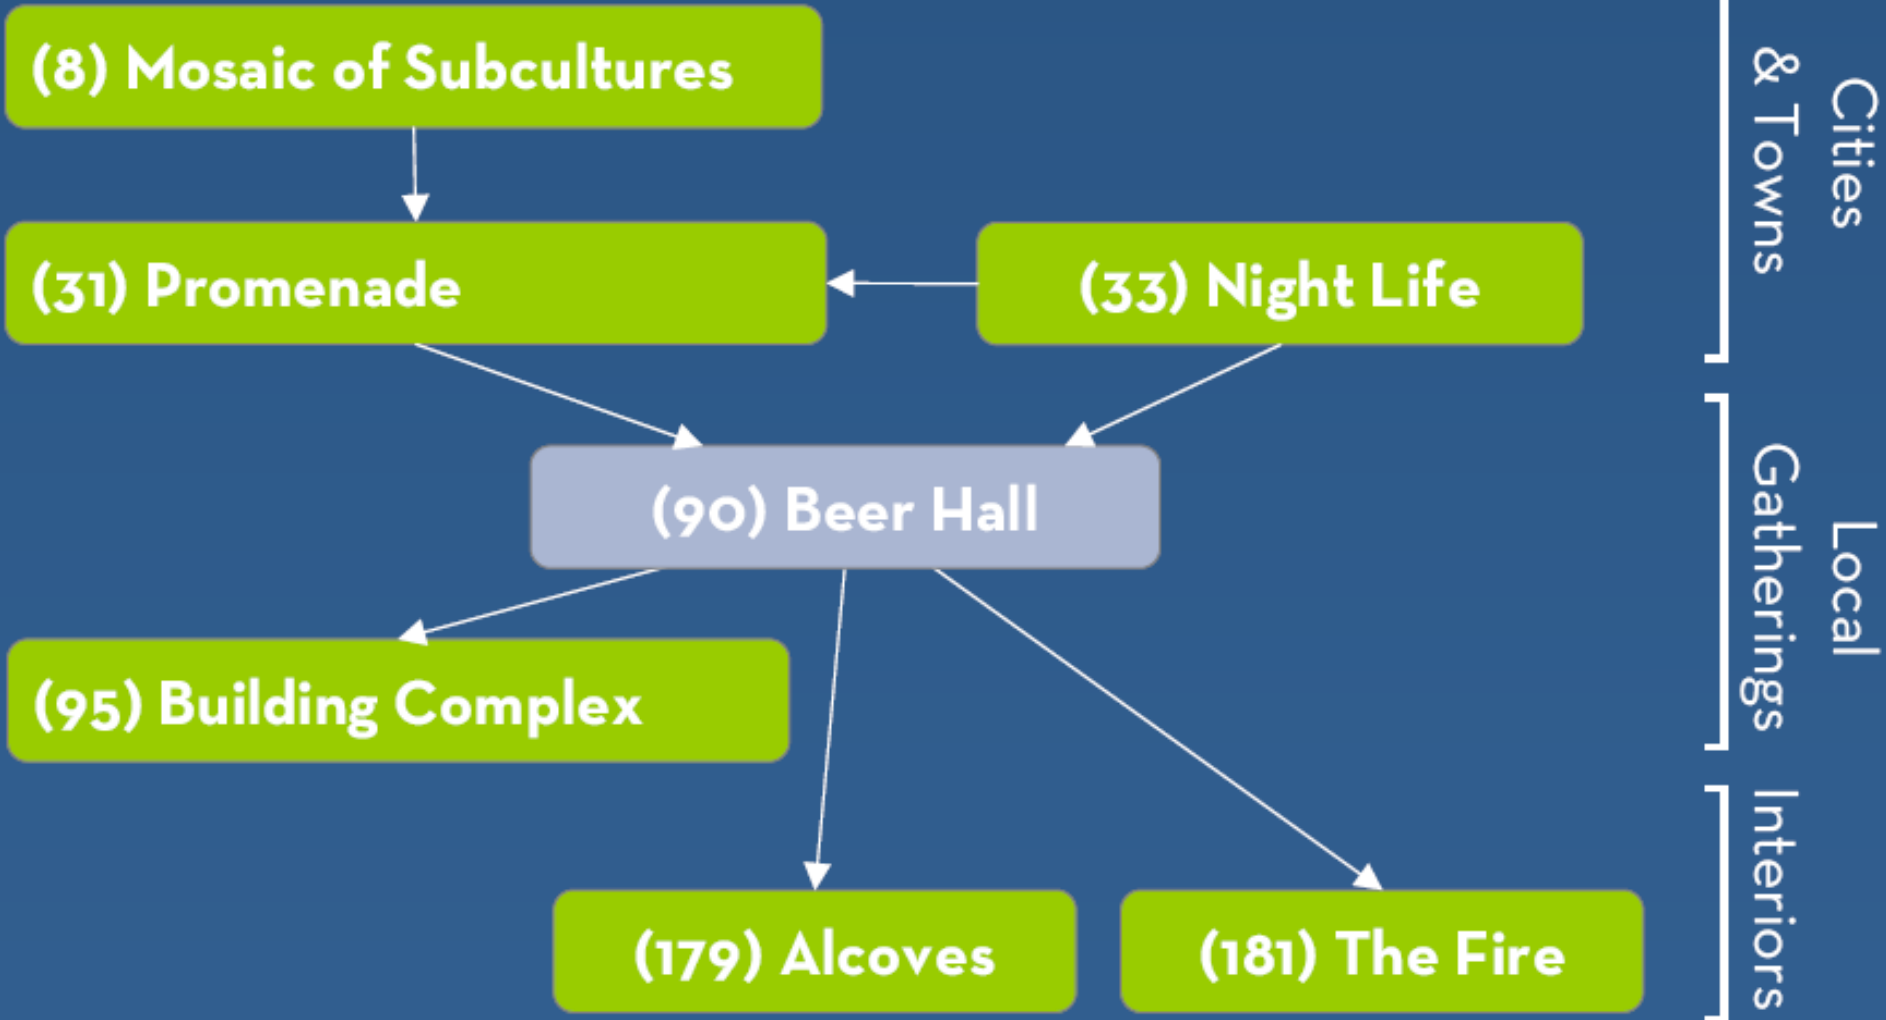

- Design patterns communicate common design problems and solutions
- First used in architecture [Alexander]
- Ex. How to create a beer hall where people socialize?

Using Design Patterns

- Not too general and not too specific
 - Use a solution “a million times over, without ever doing it the same way twice”
- Design patterns are a shared language
 - for “building and planning towns, neighborhoods, houses, gardens, & rooms.”
 - Ex. Beer hall is part of a center for public life...
 - Ex. Beer hall needs spaces for groups to be alone...ALCOVES

A Web of Design Patterns

Web Design Patterns

- Now used in Web design
- Communicate design problems & solutions
 - how to create navigation bars for finding relevant content...
 - how to create a shopping cart that supports check out...
 - how to make e-commerce sites where people return & buy...

Navigation Bar

- Problem: Customers need a structured, organized way of finding the most important parts of your Web site

The screenshot shows a website navigation structure. At the top, a dark brown navigation bar contains the text "Group for User Interface Research" on the left and a menu with "Home", "Projects" (highlighted in yellow), "People", "Publications", and "Links" on the right. Below this is a sidebar with a "DENIM and SILK" header and a list of links: "Download", "Documentation", "Support", "Research", "Publications", and "More Projects". The main content area features a "DENIM and SILK" header with an illustration of a notepad labeled "SILK". Below this is a blue navigation bar with the "IBM" logo, "United States", a search box, and a menu with "Home", "Products & services", "Support & downloads", and "My account". A "Select a country" dropdown is also present. Below the navigation bar is a "Buy today, ship today" promotion with a laptop image and text: "If you need it fast, IBM can ship select PC models to you today when you buy by 3 p.m. Eastern, Monday-Friday. (U.S. only)". On the right side, there are three promotional tiles: "Fine-tune your IBM mainframe", "e-business on demand", and "IBM Global Financing". Red boxes highlight the top navigation bar, the sidebar, the main navigation bar, and the "Buy today, ship today" promotion.

Navigation Bar

- Solution Diagram
 - Captures essence of how to solve problem

Patterns Support Creativity

- Patterns come from successful examples
 - sites that are so successful that lots of users are familiar with their paradigms (e.g., Yahoo)
 - interaction techniques/metaphors that work well across many sites (e.g., shopping carts)
- Not too general & not too specific
 - you need to specialize to your needs
- Patterns let you focus on the hard, unique problems to your design situation
 - every real design will have many of these

Process Funnel

- Problem: Need a way to help people complete highly specific stepwise tasks
 - Ex. Create a new account
 - Ex. Fill out survey forms
 - Ex. Check out

Process Funnel

The screenshot shows the Half.com website interface. At the top, there's a navigation bar with the Half.com logo, a search bar, and links for 'my account', 'cart', 'help', 'home', and 'sign in'. Below this is a category menu with buttons for Home, Books, Music, DVDs/Movies, Video Games, Computers & Software, Electronics, and Everything Else. A secondary navigation bar contains 'Gift Certificates', 'Wish List', 'Pre-Orders', 'Sell Your Stuff', and 'New Users'. The main content area is divided into several sections:

- People with similar tastes also enjoyed...:** A sidebar on the left featuring three product recommendations:
 - Weezer (1994)** (CD, 1994) by Weezer, priced at \$5.00 (Save \$6.97).
 - Pinkerton** (CD, 1996) by Weezer, priced at \$6.00 (Save \$10.95).
 - All Killer No Filler [ECD]** (CD, 2001).
- Redeeming a Gift Certificate or Coupon?:** A section with a search box and a 'GO' button.
- Shopping Cart:** The main cart area showing one item: **Weezer (2001)** (CD, Release Year: 2001) by Weezer (Music). The item price is \$8.30, and the shipping cost (Media Mail) is \$2.45. The total is \$10.75. Below the item are links to 'Move to WishList', 'Remove from Cart', and 'Find another one'. A 'Redeem' button is also present.
- Gift Certificates and Coupons:** A section with a text box for entering a claim code and a 'Redeem' button.
- Checkout Buttons:** Two 'Proceed to Checkout' buttons with 'Speedy Checkout' options are located in the top right and bottom right corners.

Process Funnel

- What's different?
 - No tab rows

Related Patterns

Model-View-Controller (MVC)

- Classic design pattern for application architecture
- Splits application into three main layers:
 - Model
 - View
 - Controller

Model-View-Controller

- **Model**
 - Domain-specific representation of the information on which the application operates
 - Includes raw data and operations on it
 - In web applications, this is often a database
- **View**
 - Renders the model into a form suitable for interaction
 - In web applications, the view is an HTML page
- **Controller:**
 - Processes and responds to events, typically user actions, and may invoke changes on the model and view
 - In web applications, this is often Javascript or an HTTP GET/POST handler

Advantages of MVC

- **Clarity of design:** Easy to understand how to control the model's behavior by looking at the methods in the model
- **Modularity of design:** any of the components can be swapped in and out as the user or programmer desires - even the model! Development of the various components can progress in parallel
- **Multiple views:** the application can display the state of the model in a variety of way, and change views when appropriate

Meaningful Error Messages

- Problem: When customers make mistakes, they need to be informed of the problem and how to recover
- Solution
 - Clear statement of problem
 - Explain how to recover
 - Position near the problem

Patterns Offer the Best of Principles, Guidelines, & Templates

- Patterns help you get the details right, without over-constraining your solution
 - unlike principles, patterns not too general, so will apply to your situation
 - unlike guidelines, patterns discuss tradeoffs, show good examples, & tie to other patterns
 - unlike style guides, patterns not too specific, so can still be specialized
 - unlike templates, patterns illustrate flows among different pages
- Patterns can serve as documentation for team-oriented environments

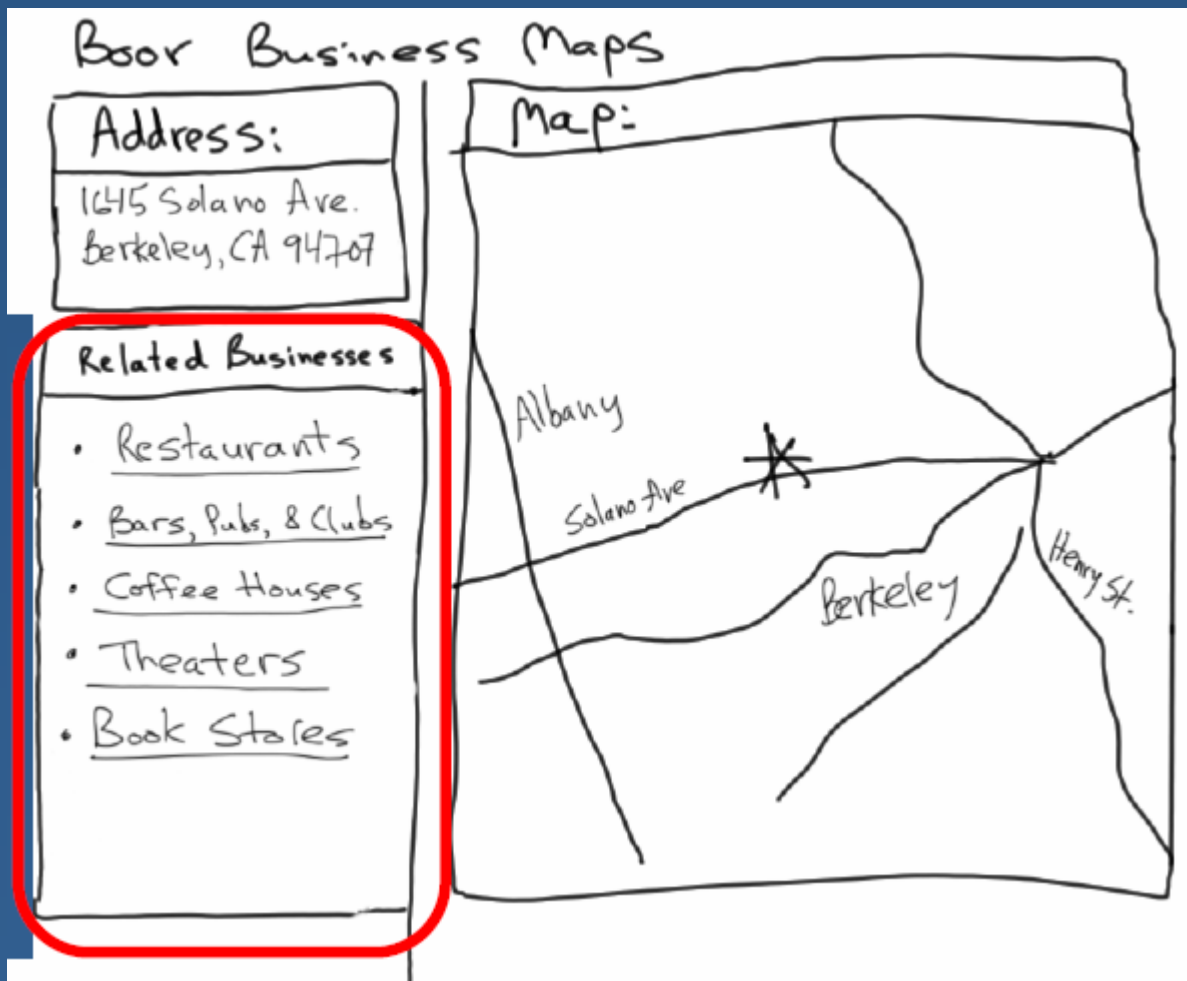

Design Exploration Example

- John given the task of designing a new subsite for showing maps to businesses
 - listings found by typing in address
 - key feature: show nearby businesses
- John comes up with two design sketches
 - Design #1 uses ALPHABETICAL ORGANIZATION (B5) for list of **all** nearby businesses
 - Design #2 uses TASK-BASED ORGANIZATION (B4) for list of **related** nearby businesses

Design #1: Alphabetical Organization

Design #2: Task-Based Organization

Evaluating Which Design to Choose

- Low-fidelity Usability Test
 - sketches the rest of the key screens on paper
 - brings in 5 participants to his office
 - asks each to carry out 3 tasks while John's colleague Sam "plays computer"
 - John observes how they perform
- Tasks
 - 1) look up 1645 Solano Ave., Berkeley CA
 - 2) look up 1700 California Ave, San Francisco CA & find Tadich Grill
 - 3) look up 2106 N 55th St, Seattle WA & find a Sushi restaurant nearby

Evaluating Which Design to Choose

- Results with Design #1 (Alphabetical)
 - Task 1: look up 1645 Solano Ave
 - no difficulties encountered -warm-up task!
 - Task 2: look up 1700 California & find Tadich Grill
 - several users didn't notice that the list of nearby businesses was scrollable (due to paper affordances?)
 - those that scrolled took awhile to find in list of over 500
 - Task 3: look up 2106 55th St & find nearby Sushi restaurant
 - 3 users only picked restaurants that had "restaurant" in the name & thus couldn't find "Kisaku"

Evaluating Which Design to Choose

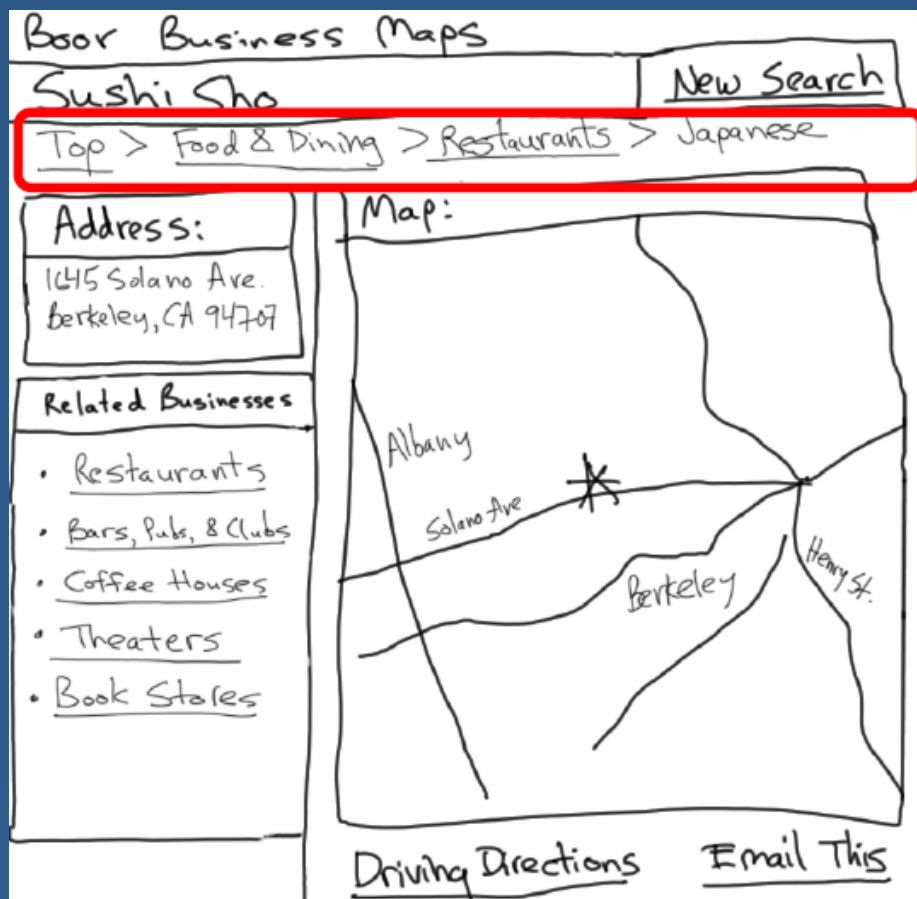

- Results with Design #2 (Task-based)
 - Task 1: look up 1645 Solano Ave
 - no difficulties encountered -warm-up task!
 - Task 2: look up 1700 California & find Tadich Grill
 - 1 user took awhile to figure out that Tadich Grill was a restaurant & to click on the “Restaurants” link
 - all others found it in 2 clicks (Restaurants->Tadich Grill)
 - Task 3: look up 2106 55th St & find nearby Sushi restaurant
 - 3 found “Kisaku” in 2 clicks
 - 2 others asked for a listing of Japanese restaurants

Evaluating Which Design to Choose

- General comments
 - 2 users said they often want to email maps to friends who they will be meeting (task-based)
 - 3 users wanted driving directions (task-based)
- TASK-BASED ORGANIZATION (B4) worked better, but still had some minor problems

Design #2 - Revision 2

Adding HIERARCHICAL ORGANIZATION (B3) & LOCATION BREAD CRUMBS (K6)

Design #2 - Revision 3

Adding SEARCH ACTION MODULE (J1)
