HCI+D: USER INTERFACE DESIGN + PROTOTYPING + EVALUATION

(1) Action Analysis
 (2) Automated Evaluation

Prof. James A. Landay
 Computer Science Department
 Stanford University

Autumn 2014
 November 18, 2014

Outline

- Action analysis
- GOMS? What's that?
- The G, O, M, & S of GOMS
- How to do the analysis
- Automated evaluation tools
- Team Break (~50 minutes)

Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 5

Action Analysis Predicts Performance

- Cognitive model ?
 - model some aspect of human understanding, knowledge, intentions, or processing
 - two types
 - competence
 - predict behavior sequences
 - performance
 - predict performance, but limited to routine behavior
- Action analysis uses performance model to analyze goals & tasks
 - generally done hierarchically (similar to task analysis)

Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 6

GOMS – Most Popular AA Technique

- Family of UI modeling techniques
 - based on Model Human Processor cognitive model
- GOMS stands for
 - Goals
 - Operators
 - Methods
 - Selection rules
- Input: detailed description of UI/task(s)
- Output: qualitative & quantitative measures

Quick Example

- Goal (the big picture)
 - go from hotel to the airport
- Methods (or subgoals)?
 - walk, take bus, take taxi, rent car, take train
- Operators (or specific actions)
 - locate bus stop; wait for bus; get on the bus;...
- Selection rules (choosing among methods)?
 - Example: Walking is cheaper, but tiring and slow
 - Example: Taking a bus is complicated abroad

Goals

- Something the user wants to achieve
- Examples?
 - go to airport
 - delete file
 - create directory
- Hierarchical structure
 - may require many subgoals

Methods

- Sequence of steps to accomplish a goal
 - goal decomposition
 - can include other goals
- Assumes method is *learned & routine*
- Examples
 - drag file to trash
 - retrieve from long-term memory command

Operators

- Specific actions (small scale or atomic)
- Lowest level of analysis
 - can associate with times
- Examples
 - Locate icon for item on screen
 - Move cursor to item
 - Hold mouse button down
 - Locate destination icon
 - User reads the dialog box

Selection Rules

- If > 1 method to accomplish a goal, Selection rules pick method to use
- Examples
 - IF <condition> THEN accomplish <GOAL>
 - IF <car has automatic transmission> THEN <select drive>
 - IF <car has manual transmission> THEN <find car with automatic transmission>

GOMS Output

- Execution time
 - add up times from operators
 - assumes ?
 - experts (mastered the tasks) & error free behavior
 - very good rank ordering
 - absolute accuracy ~10-20%
- Procedure learning time (NGOMSL only)
 - accurate for relative comparison only
 - doesn't include time for learning domain knowledge

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

13

GOMS Output Used To

- Ensure frequent goals achieved quickly
- Making hierarchy is often the value
 - functionality coverage & consistency
 - does UI contain needed functions?
 - consistency: similar tasks performed similarly?
 - operator sequence
 - in what order are individual operations done?

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

14

How to do GOMS Analysis

- Generate task description
 - pick high-level user Goal
 - write Method for accomplishing Goal
 - may invoke subgoals
 - write Methods for subgoals
 - this is recursive
 - stops when Operators are reached
- Evaluate description of task
- Apply results to UI
- Iterate!

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

Comparative Example – Unix shell

- Goal: Delete a File
- Method for accomplishing goal of deleting file
 - retrieve from Long term memory that command verb is "rm"
 - think of directory name & file name and make it the first listed parameter
 - accomplish goal of entering & executing command
 - return with goal accomplished

Comparative Example - Windows

- Goal: Delete a File
- Method for accomplishing goal of deleting file
 - find file icon
 - accomplish goal of dragging file to trash
 - return with goal accomplished

Autumn 2014

HCI+D - Advanced User Interface

Comparative Example – Unix shell

- Goal: Remove a directory
- Method for accomplishing goal of removing a directory
 - ?????

Comparative Example – Unix shell

- Goal: Remove a directory
- Method for accomplishing goal of removing a directory
 - accomplish goal of making sure directory is empty
 - retrieve from long term memory that command verb is 'rmdir'
 - think of directory name and make it the first listed parameter
 - accomplish goal of entering & executing command
 - return with goal accomplished

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

18

Comparative Example - Windows

- Goal: Remove a directory
- Method for accomplishing goal of removing a directory
 - ????

Comparative Example - Windows

- Goal: Remove a directory
- Method for accomplishing goal of removing a directory
 - find folder icon
 - accomplish goal of dragging folder to trash
 - return with goal accomplished
- Note the consistency with delete file on Windows (GUI)! This makes it much easier.

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

21

What GOMS Can Model

- Task must be goal-directed
 - some activities are more goal-directed
 - creative activities may not be as goal-directed
- Task must use routine cognitive skills
 - as opposed to problem solving
 - good for things like machine operators

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

22

Applications of GOMS

- Compare different UI designs
- Profiling (time)
- Building a help system? Why?
 - modeling makes user tasks & goals explicit
 - can suggest questions users might ask & the answers

Real-world GOMS Applications

- Keystroke Level Model (KLM)
 - Mouse-based text editor
 - Mechanical CAD system
- NGOMSL
 - TV control system
 - Nuclear power plant operator's associate
- CPM-GOMS
 - Telephone operator workstation

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

Advantages of GOMS

- Gives qualitative & quantitative measures
- Model explains the results
- Less work than *large* user study – no users!
- Easy to modify when UI is revised
- Research: tools to aid modeling process since it can still be tedious

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

25

Disadvantages of GOMS

- Not as easy as HE, guidelines, etc.
- Takes lots of time, skill, & effort
- Only works for goal-directed tasks
- Assumes tasks performed by *experts without error*
- Does not address several UI issues,
 - readability, memorizability of icons, commands...

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

26

Rapid Iterative Design is the Best Practice for Creating Good UIs

We have seen how computer-based tools improve the *Design* (e.g., Denim) & *Prototyping* (e.g., Proto.io) phases

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

27

Automated GOMS Tools

- Can save, modify & re-use the model
- Automation of execution time calculation, etc.

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

28

QGOMS tool

Autumn 2014

CRITIQUE

Hudson et al (1999)

Automatic GOMS Model Generation

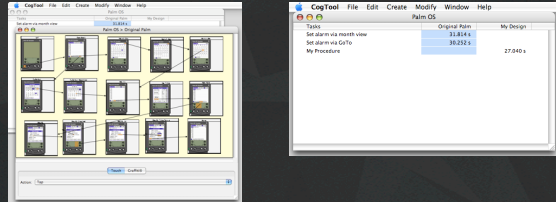

1. Prototype system by programming
 - in this case with the SubArctic toolkit
2. Demonstrate a task
 - record events
 - apply rules
3. Automatically generate KLMs
4. Semi-automatically generate classic GOMS models

Autumn 2014

HCI+D - Advanced User Interface Design, Prototyping, & Evaluation

30

CogTool John & Salvucci (2005)

1. Prototype system by *storyboarding*
2. Demonstrate a task
 - record events
 - apply rules
3. Automatically generate ACT-R model

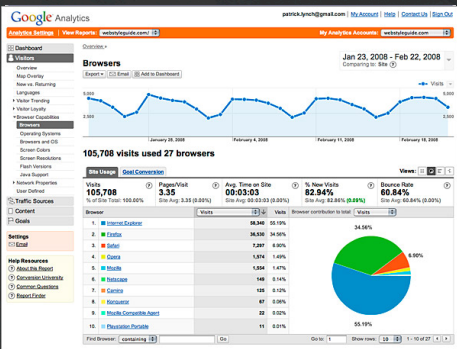

Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 31

Automated Analysis & Remote Testing

- Log analysis
 - infer user behavior by looking at web server logs
- A-B Testing
 - show different user segments different designs
 - requires live site (built) & customer base
 - measure outcomes (profit), but not why?
- Remote user testing
 - similar to in lab, but online (e.g., over Skype)

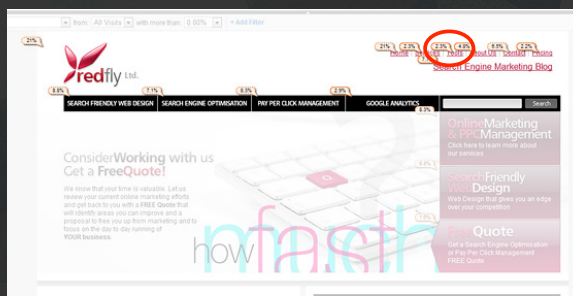

Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 32

Web Log Analysis Difficult

Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 33

Google Analytics – Server Logs++

Site Usage	Unique Pageviews	Avg. Time on Page	Avg. Page Load Time (sec)	Bounce Rate	% Exit
Pageviews	2,104	00:01:21	11.00	80.17%	49.84%
% of Total	2.42% (97,345)	% of Total	2.25% (75,453)	% of Total	98.10% (30,219)
% of Total	2.42% (97,345)	% of Total	2.25% (75,453)	% of Total	98.10% (30,219)

Business Solution - 9% Clicks Below / 100% Clicks Above

Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 36

Web Allows Controlled A/B Experiments

- Example: Amazon Shopping Cart
 - Add item to cart
 - Site shows cart contents
- Idea: show recommendations based on cart items
- Arguments
 - Pro: cross-sell more items
 - Con: distract people at check out
- Highest Paid Person's Opinion "Stop the project!"
- Simple experiment was run, wildly successful

From Greg Linden's Blog: <http://glinden.blogspot.com/2006/04/early-amazon-shopping-cart.html>

Windows Marketplace: Solitaire vs. Poker

Which game has the higher clickthrough? By how much?

A: Solitaire game

B: Poker game

A is 61% better. Why?

1129				

- ### Advantages of Remote Usability Testing
- Fast
 - can set up research in 3-4 hours
 - get results in 36 hours
 - More accurate
 - can run with large samples (50-200 users → stat. sig.)
 - uses real people (customers) performing tasks
 - natural environment (home/work/machine)
 - Easy-to-use
 - templates make setting up easy
 - Can compare with competitors
 - indexed to national norms
- Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 45

- ### Disadvantages of Remote Usability Testing
- Miss observational feedback
 - facial expressions
 - verbal feedback (critical incidents)
 - Need to involve human participants
 - costs some amount of money (typically \$20-\$50/person)
 - People often do not like pop-ups
 - need to be careful when using them
- Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 46

- ### Summary
- GOMS
 - provides info about important UI properties
 - doesn't tell you everything you want to know about UI
 - only gives performance for expert, error-free behavior
 - hard to create model, but still easier than user testing
 - changing later is much less work than initial generation
 - Automated usability
 - faster than traditional techniques
 - can involve more participants → convincing data
 - easier to do comparisons across sites
 - tradeoff with losing observational data
- Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 47

- ### Next Time
- Guest Lecture
 - Irene Au (Design Operating Partner at Khosla Ventures)
 - She will mainly be taking questions – please come up with one question each so we have a lively discussion
 - Assignments
 - #5 Web site (online by late Thur night)
 - if you need a few extra days let your CA know
 - #12 Hi-fi Prototype #3 (midway milestone on Fri)
- Autumn 2014 HCI+D - Advanced User Interface Design, Prototyping, & Evaluation 48
