John Whitworth

Vision

Check off your goals while making and strengthening connections.

Overview

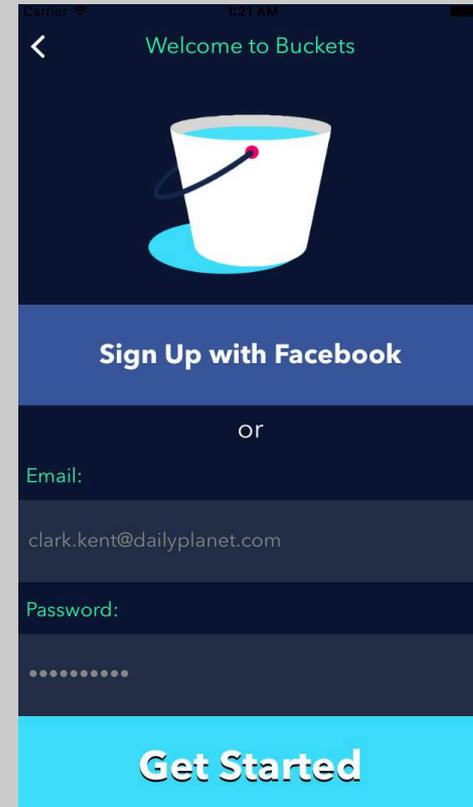

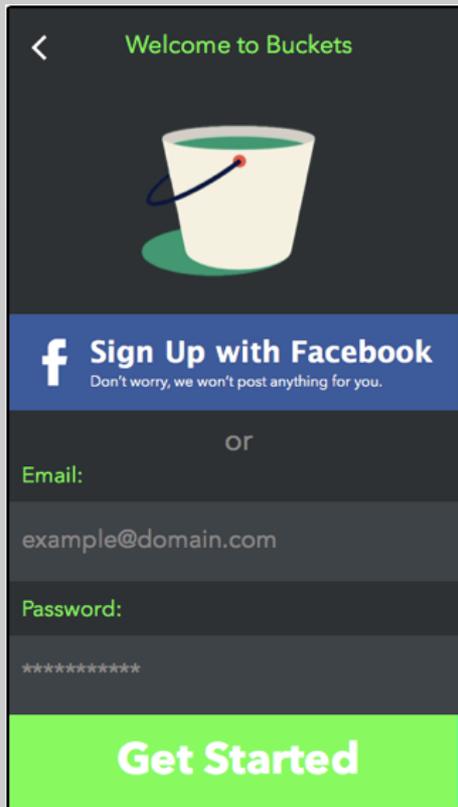

- UI Modifications
- Tools and processes
- Demo

UI MODIFICATIONS

Severity 3-4

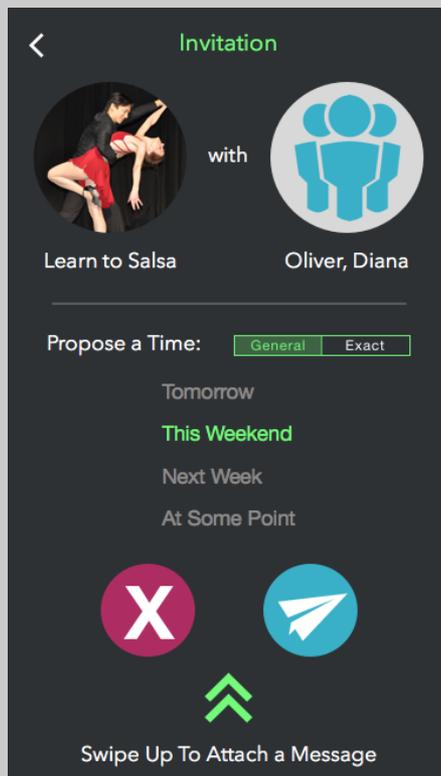

Feedback - Aesthetics

Suggestion	Our Thoughts
Unify colors. "Looks like Spotify".	Colors changed and unified

Feedback – Aesthetics

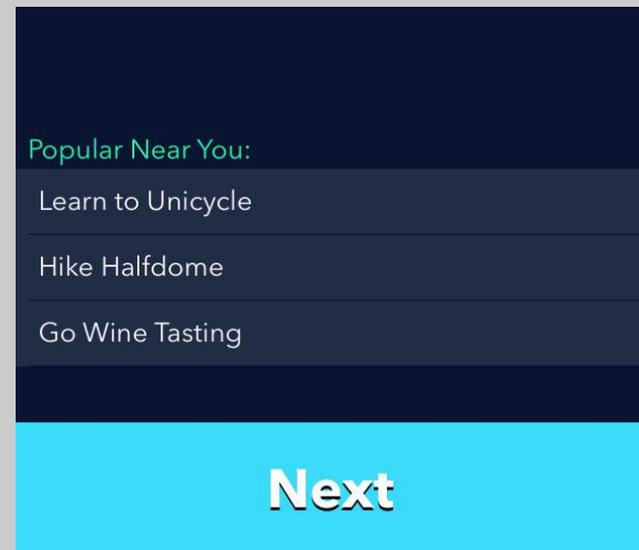

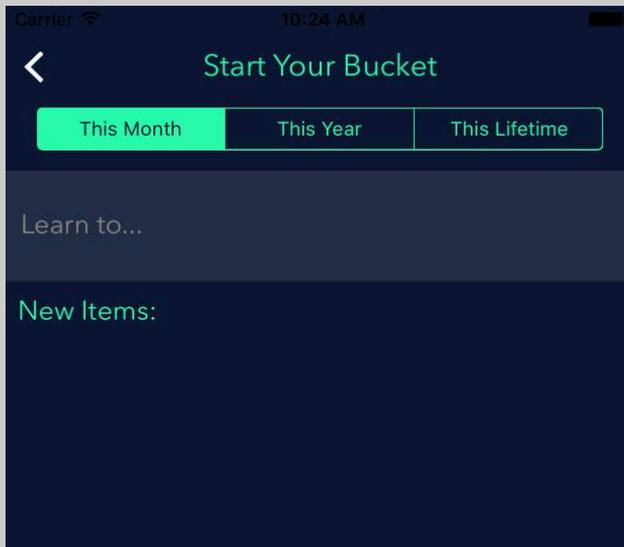

Suggestion	Our Thoughts
Unify colors. "Looks like Spotify".	Colors changed and unified
Doesn't make sense to have big red cancel button when creating an invite	It's been removed

- Red button removed
- Send button moved to center

Feedback – Bucket List

Suggestion	Our Thoughts
More time granularity in completing bucket list items	May add one more option, any more may feel like to-do list
Make bucket list suggestions based on chosen time frame	Not changing, users should have freedom to choose their schedules
Bucket list privacy options	Good idea, may implement for final version

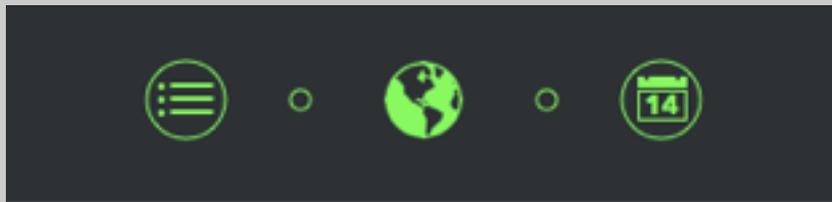

Feedback – Invites/Communities

Suggestion	Our Thoughts
All chats accessible in one place	We don't want to make this into a messaging app, so we will keep current flow. We will add more guidance on how chats are grouped by invite
Make proposing a new time more obvious	Invite screen shows proposed time, clicking on it pulls up time picker scrolly.
How does joining a community work?	More documentation added to explain what communities are and why users should join

Feedback – General

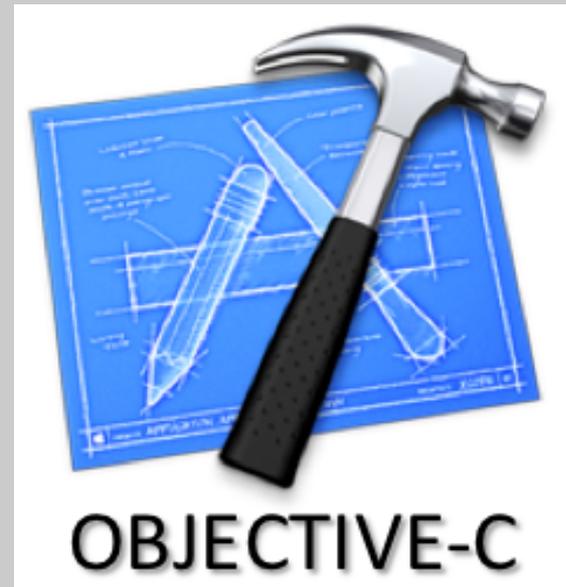

Suggestion	Our Thoughts
Navigation icons are confusing	Navigation icons will be changed
More instructions on how the app works	Instructions will be added
Settings page	Will be in final version

TOOLS AND PROCESSES

Tools

- iOS app created in Xcode 7
 - Objective C instead of Swift since our team has more experience with it (CS 193P)
- Simulated on iPhone 6S in iOS 9

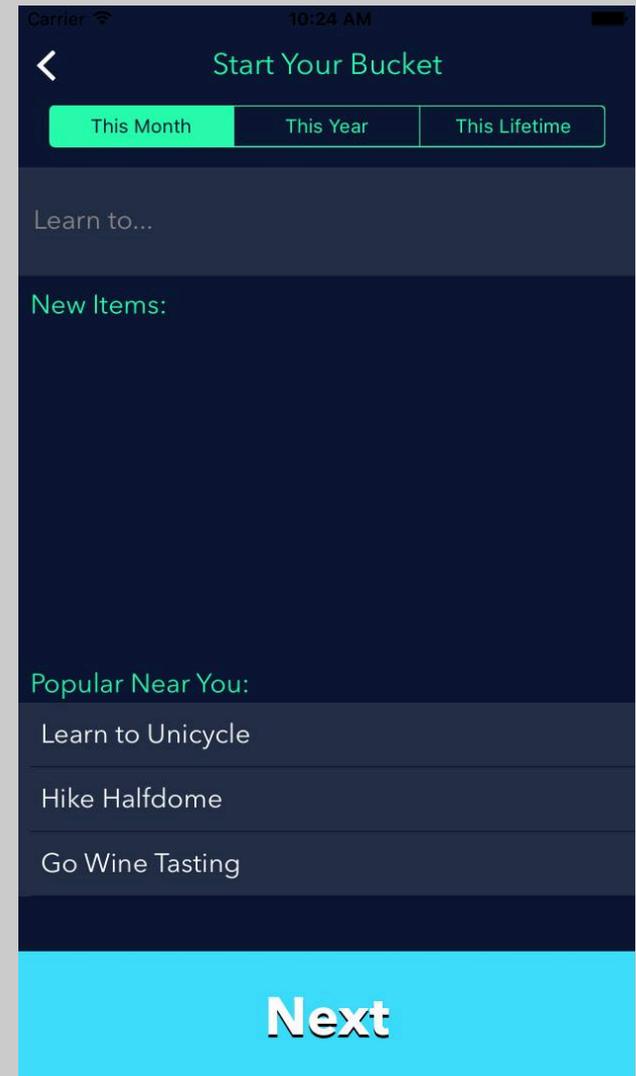

IMPLEMENTATION DETAILS

Implemented So Far

- Login flow
- Add bucket items to list
- Core data storage

- All suggestions and users are hard-coded at this point

Left to Implement

- Communities
 - 11/24/15
- Sending and accepting invites
 - 11/30/15
- Settings page
 - 12/2/15

LIVE DEMO

Summary

- We think we're on track
- Login flow implemented
- Simple task (add item to bucket) implemented
- Need to work heavily over the next week on other 2 tasks
