The Computer for the 21st Century

Mark Weiser (1991)

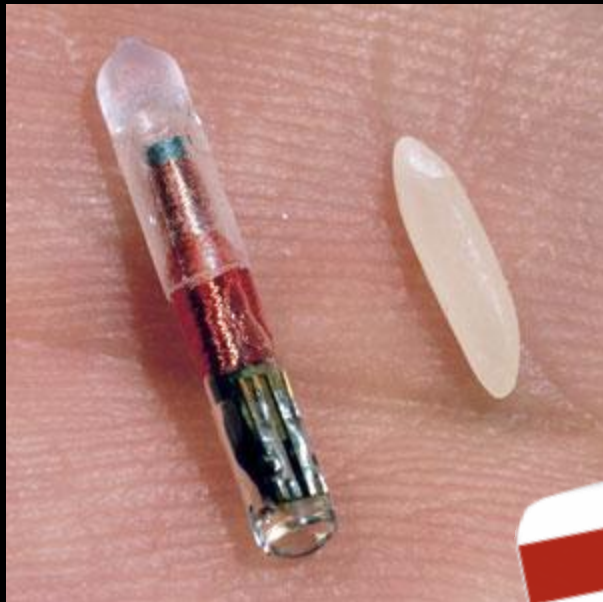

Why has **silicon-based technology**
been slow in becoming
part of our environment?

How much of Weiser's **vision**
is true today?

Ubiquitous computing
vs.
Virtual reality

“Doors open only to the right badge wearer,
rooms greet people by name,
telephone calls can be automatically forwarded to
wherever the recipient may be,
receptionists actually know where people are,
computer terminals retrieve the preferences
of whoever is sitting at them,
and appointment diaries write themselves.”

How should we handle the tradeoff
between **convenience** and **privacy**?

Gregor Hinstie Callista age 47/48
born 1950?

younger brother - Georges
Greg age 3 when born

Gwen
Georges - byff
Former
Corp

twin sister - Gwendolyn Emily Quirida - born 1950
older

Gwen - 32/7 when married Robert - age 24
30 when had Rose

died @ 2047 by DE-AK? 42 when Francis died 77

Gregor met Mae @ age 29 Mae was 24
married 6 months after - age 29/25

Violet born when age 32/27
Ashton born when age 36/31

Robert Quirida died age 34 of malaria

Frank & Mahria - 32/31 when married
Gwen & Greg born @ ages 35/34
George born @ ages 38/37

Mahria died age 65 - AK by Voldemort

Georges - married Mina ages 23/26
Jason born @ age 24/27

Greg works @ Ministry - Auror

Frank born 1915
Mahria 1916

~~Georges~~
~~Min~~
~~Corp~~
Mae - ~~Robert~~
Robert - ~~Georges~~
Violet died age 15 - AK
Robert + Georges best friends
Gwen + Mina best friends
Georges - 44
Mina - 47

Video Time Hrs: 00 Min: 13 Sec: 33

Hard to build wireless networks at much higher than 5-10 GHz since it begins to look more like light with its path losses and scattering

What challenges will need to be solved before ubiquitous computing can truly succeed?

Everyday Computing

No clear beginning or end

Interruptions are expected

Multitasking is the norm

Time is relevant

Associative models are needed
