Making it easy to find, share,  
and enjoy food instantly

## Food Sharing

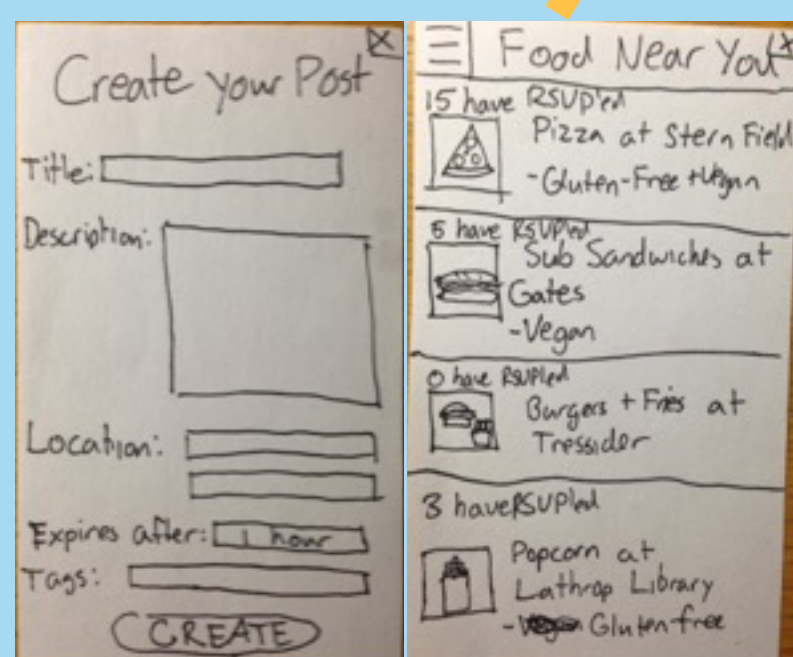

Post food events to the application with location, image, and max capacity. Never waste food at an event again!

## Food Finding

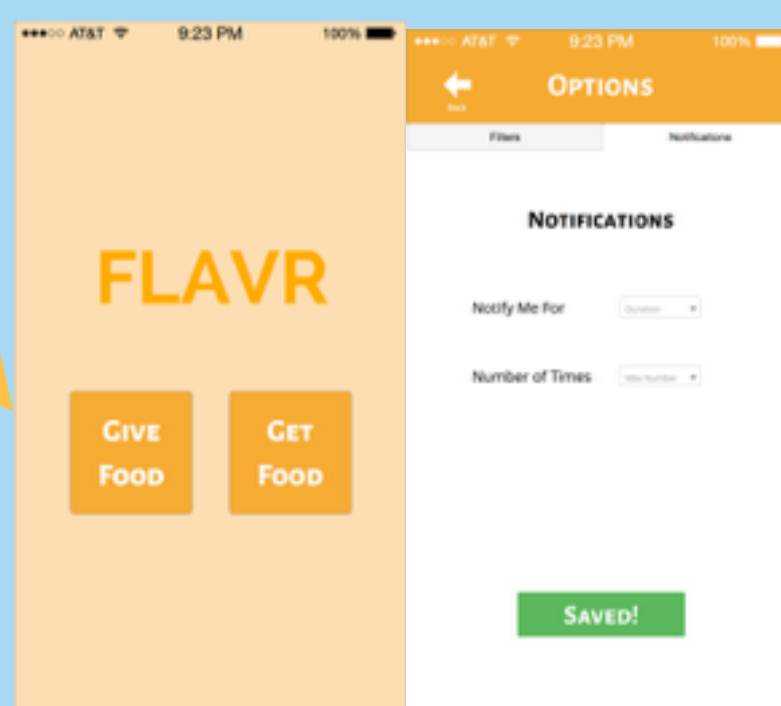

Find food by searching with filters or set notifications for the food you like. Say you're going and a map takes you there!

## Problem

Many events offering free food are hard to find and are known to only a select few. Food is wasted and students are hungry.

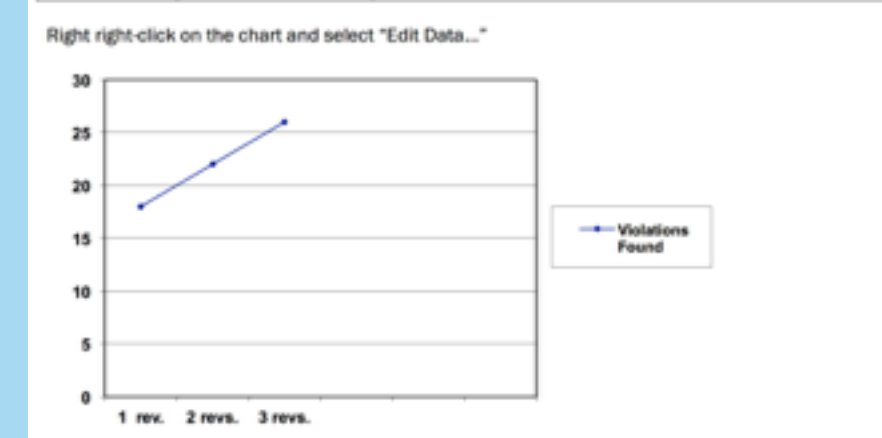

Low-Fi Prototype  
Made of Paper, Pencil

Med-Fi Prototype

## Solution

With the power of crowd-sourcing, we have created an application that connects those who want to find food with those who want to share food instantly.
