

SpeakEasy

Medium-fi Prototype

Eric Chew, Tommy Truong, Gabriela Groth, Carlos Araujo

3 Representative Tasks

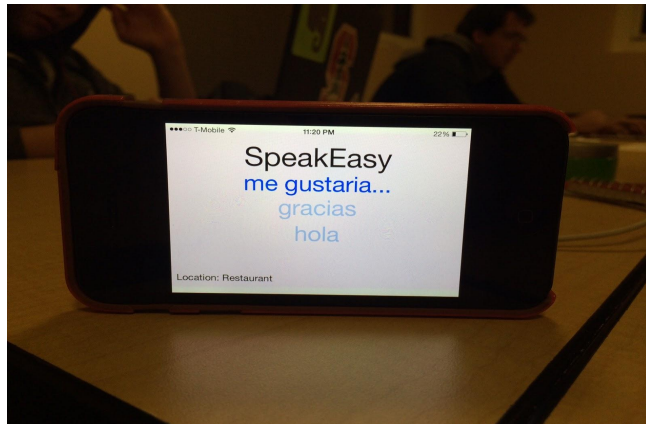

Made tasks more concrete and specific

- Understand and reproduce the correct pronunciation of words
- Get phrase suggestions for real-life conversations
- Integrate language learning into daily life

Revised UI Design

- Show suggestions in both native and new languages
- Added arrows to remind user of what gestures to use

Before

After

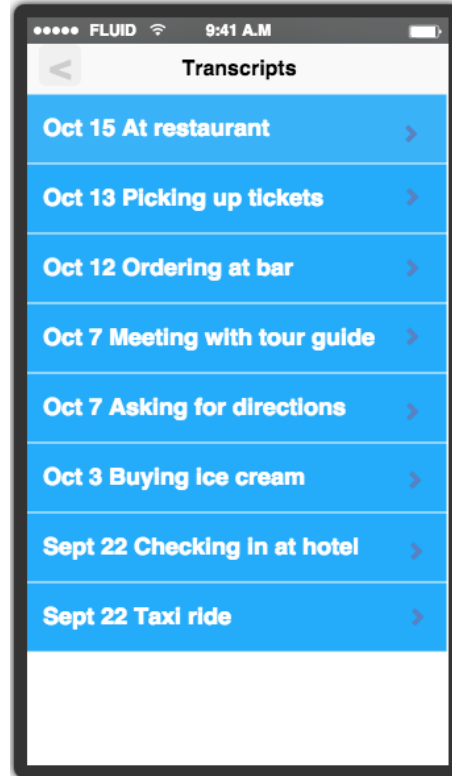

Revised UI Design

- Added new command to allow user to translate another person's speech

Revised UI Design

- Added transcripts of recorded conversations after suggestion from user.

Scenario 1

Use app to correct mispronunciations

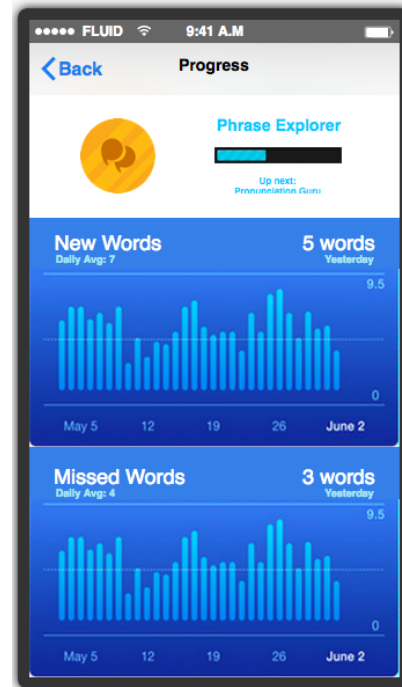

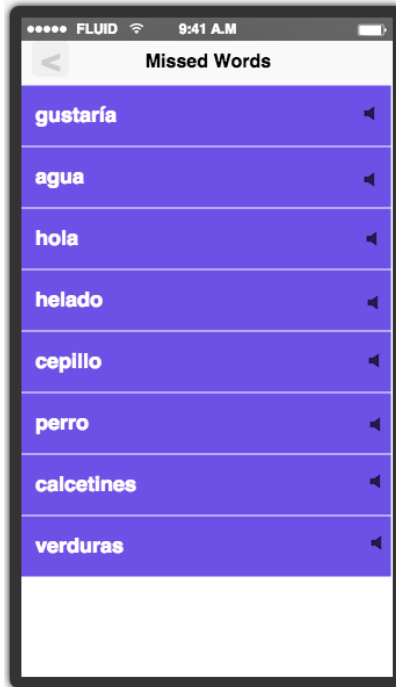

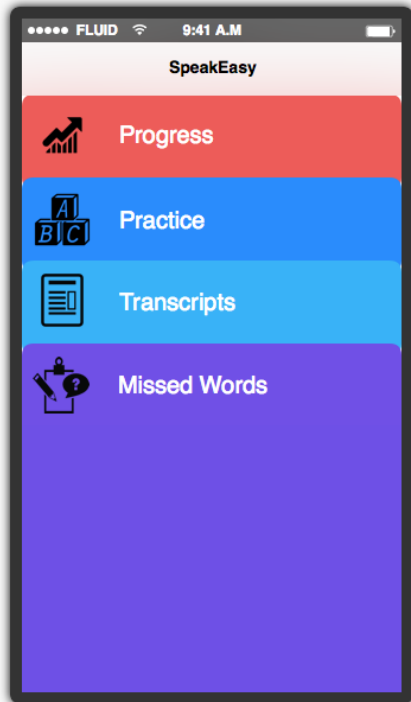

Scenario 2

Get useful phrases for a restaurant setting

Scenario 3

Get feedback on learning progress

Tools Used

- Justinmind prototyper
 - For Google Glass
 - Difficult to prototype without actually having Glass
 - Had to add buttons in place of Glass gestures
 - Works pretty well to show screens
- Fluid UI
 - For mobile part of application
 - Easy learning curve
 - Fast prototype, but no collaborative editing

Summary

- Made google glass prototype more intuitive by making indicators for gestures
- Added features to mobile app that users felt would be helpful
- Made tasks more concrete and specific
