

Epoch High Fidelity Prototype README Instructions

To use our final prototype users can go to epoch5.meteor.com/dummyArticle or follow the link from our website. Below find a set of instructions to perform our 3 main user functions:

Clicking the timeline button to get to an Epoch from an article

On the landing page click on the orange hourglass button to navigate to a page with three timelines that give you context around the (dummy) article you are reading. Navigate between tabs by clicking on the tab bar at the top of the screen and click on our logo in the top left corner to get to our actual homepage. To return to the dummy article find and use the invisible button located in the bottom right corner of the homepage.

Searching for Epochs on the Epoch website

From our homepage use our search bar to discover epochs by keywords. Try “Fast Food” or create your own Epoch with your own #'s (tags) and try using our search bar to find your epoch!

Creating an Epoch

Use the “New Epoch” button on the top navigation bar to pull up a pop box where you can enter a title, choose a category, and set tags for your new epoch. Upon submission you will be taken to a page with your new timeline and a form element to make your first entry. Save your epochs and edit them at anytime by using our save and edit buttons that live on top of your epochs as you work.
