

README File for FoodBack (by Yes&)

Accessing the Prototype from the website, instructions:

- Access the med-fi prototype from the Yes& team website in the Prototypes Section
- Select whether you'd like to see the Chef or Student task flow using the buttons
- Then click the "Med-Fi" button
 - If you have trouble accessing the correct web page, this is likely a javascript loading error. Please reload the page and recheck the link, giving the compiler time to process.
- **Limitations:**
- The prototype allows for demonstration of key tasks such as user-feedback, chef data analysis, menu browsing, and chef editing of menus for user feedback. However, it contains numerous limitations at this time.
- *Task 1*
 - Page 1 (How was your meal today):
 - the click feature does apply for the entire image.
 - Only small squares on each happy/sad face will register a click.
 - A font issue changed the color of the header text from white to dark, making it less visible.
 - Page 2 (Drag the food you the onto the plate):
 - No drag feature currently available
 - Page 3 (Rate each item you ate on the plate)
 - Clicking the thumbs up, thumbs down will not register a rating.
 - Page 4: (drag each word to the food it describes)
 - no drag feature
 - Page 5: (Thanks! Now vote for next week's meal!)
 - no identification of registered click (no highlighting of selected options)
- *Task 2&3*
 - Home Feature
 - Home feature is currently linked to title of screen rather than distinct button
 - Recipe List
 - Sorting is not enabled
 - Add new menu item is not enabled
 - menu search is not enabled
 - the only clickable menu item is Tarragon Chicken
 - Long-form Calendar
 - Adding menu item to long-term calendar from recipe list not enabled
 - unable to access specific meal pages from calendar
 - Tarragon Chicken
 - unable to access expanded text ("Show More")
 - Editing Tarragon Chicken
 - unable to edit text fields
