# OVERVIEW

# TEAM MISSION STATEMENT/VALUE PROPOSITION

Rote: task management made  
easy

# SELECTED INTERFACE & RATIONALE

We wanted Rote to be:

- Intuitive
- Smooth (less finger taps)
- Fun

# EXPERIMENTAL METHOD

Roles: Interviewer/Demo-er, Photographer, Log Recorder,  
General Note Taker

Demographics: student, young adult, old

Paper mockups -> discussion

# EXPERIMENTAL RESULTS #1

- App was easy to navigate
- “Seems pretty easy to understand”
- Wanted priority levels & reminders

# EXPERIMENTAL RESULTS #2

- Slide/Drag/Drop was big plus
- Liked progress bar
- Add difficulty feature to tasks
- Needed guidance on adding/editing task

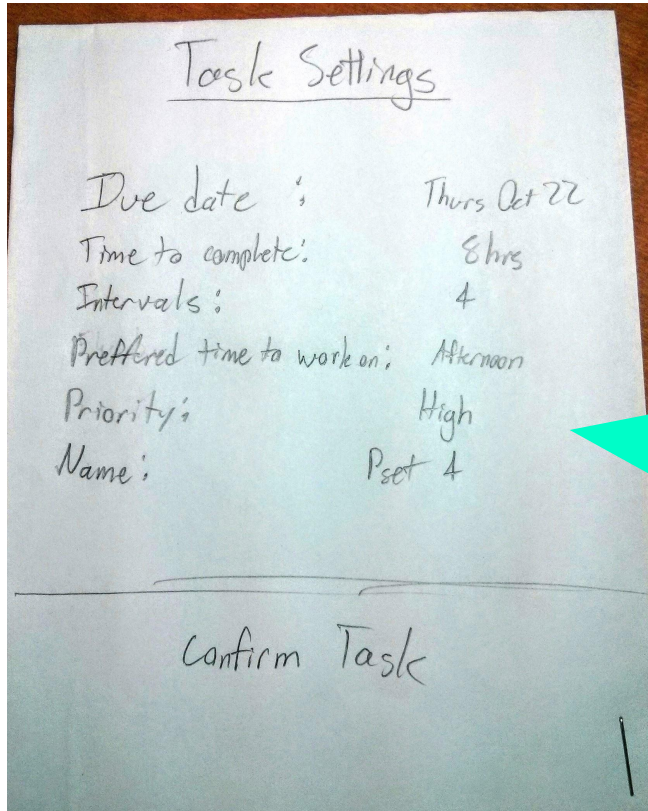

# EXPERIMENTAL RESULTS #3

- Also liked slide bars
- Add tasks: “seems very Google-like”
- Potential UI/UX differentiation
- “I think the interface is good that it allows you to add tasks easily. Most scheduling is front-heavy”
- Extending tasks with two fingers is unnatural

# SUGGESTED UI CHANGES: #1

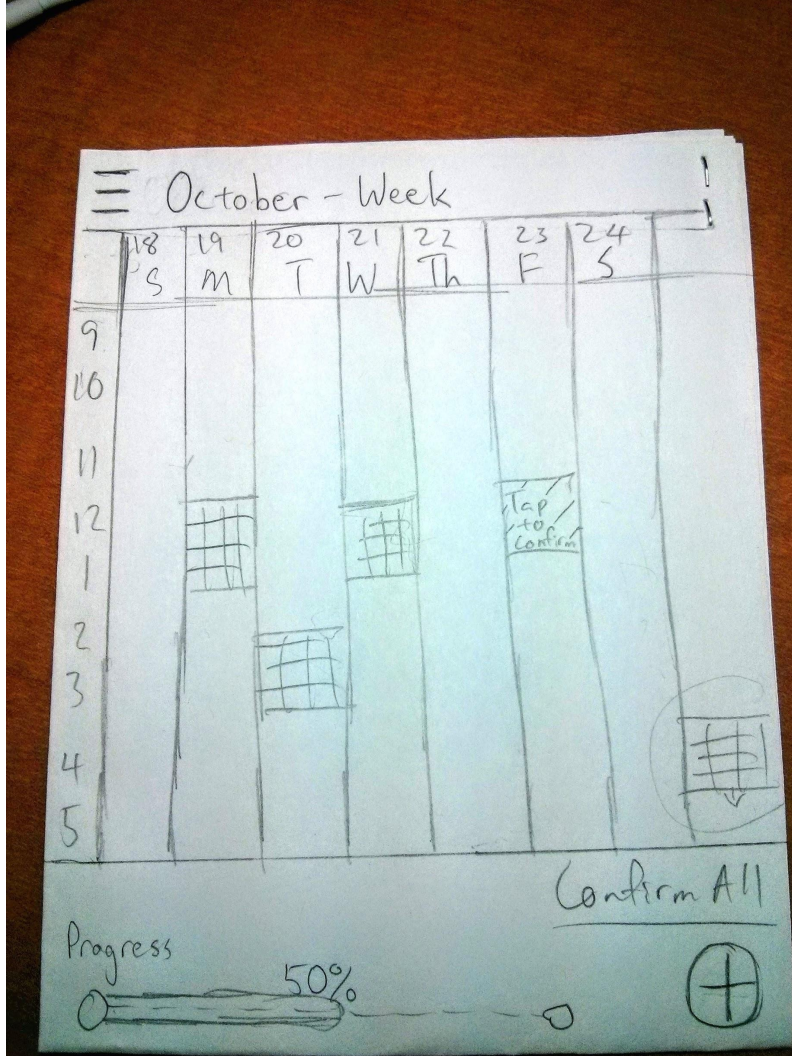

- Example of features we would add
- Priority -> size of task block?
- Other ideas: reminders, team members etc...

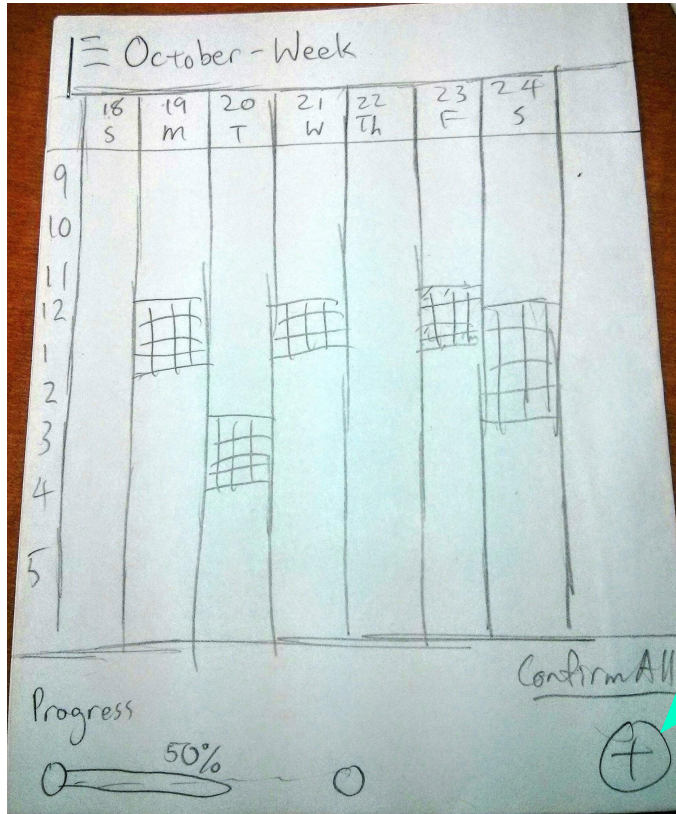

# SUGGESTED UI CHANGES: #2

- Customize tasks with difficulty & notes
- Make adding task UI very prominent
- Keep interactivity & sliders in view

ROTE

# SUGGESTED UI CHANGES: #3

- Keep sliders & interactive view
- Extend tasks using slider bar instead of stretching
- Editing on go is a plug

# SUMMARY

- Core values are sound -> easy task management
  - ML, NLP, AI -> suggested tasks
  - “Single swipe motion”
- Looking forward:
  - Options for user customization and personalization
  - Reduce number of screens to a minimum
