

# HelpList

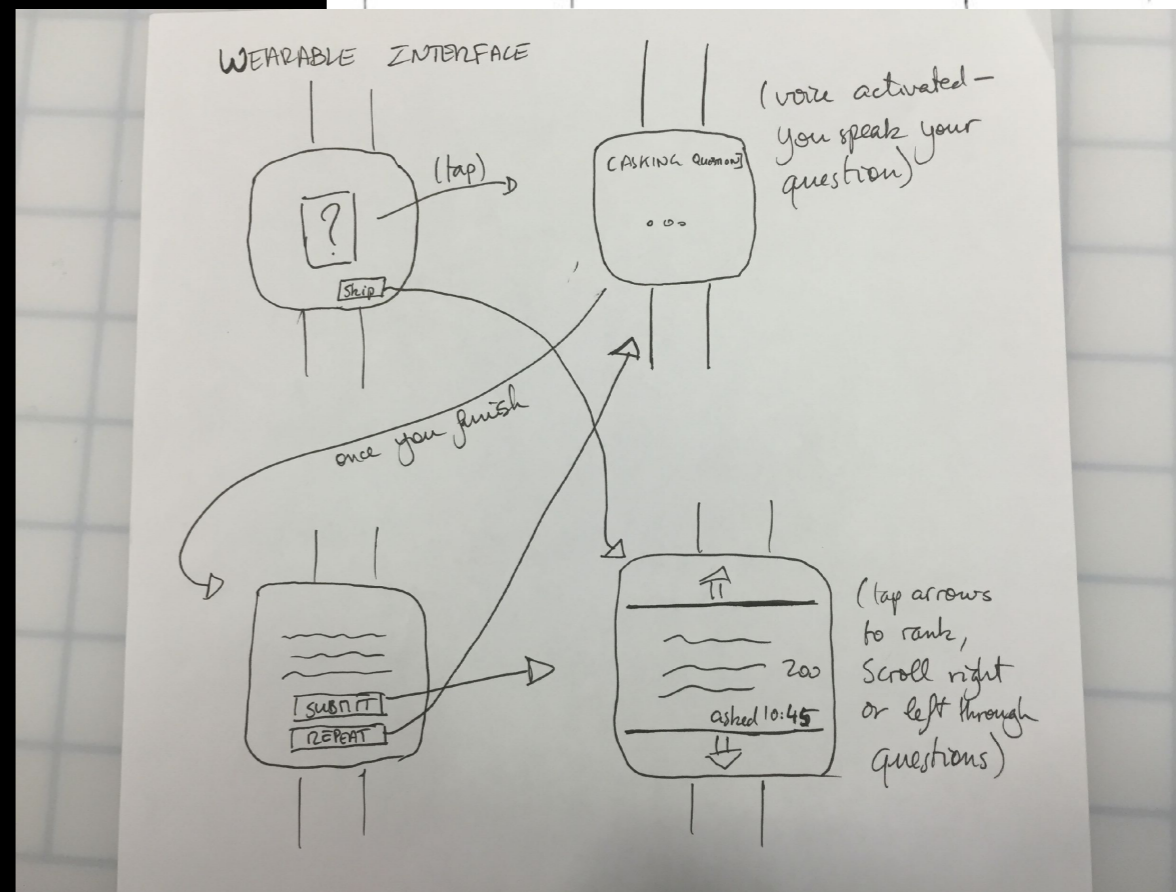

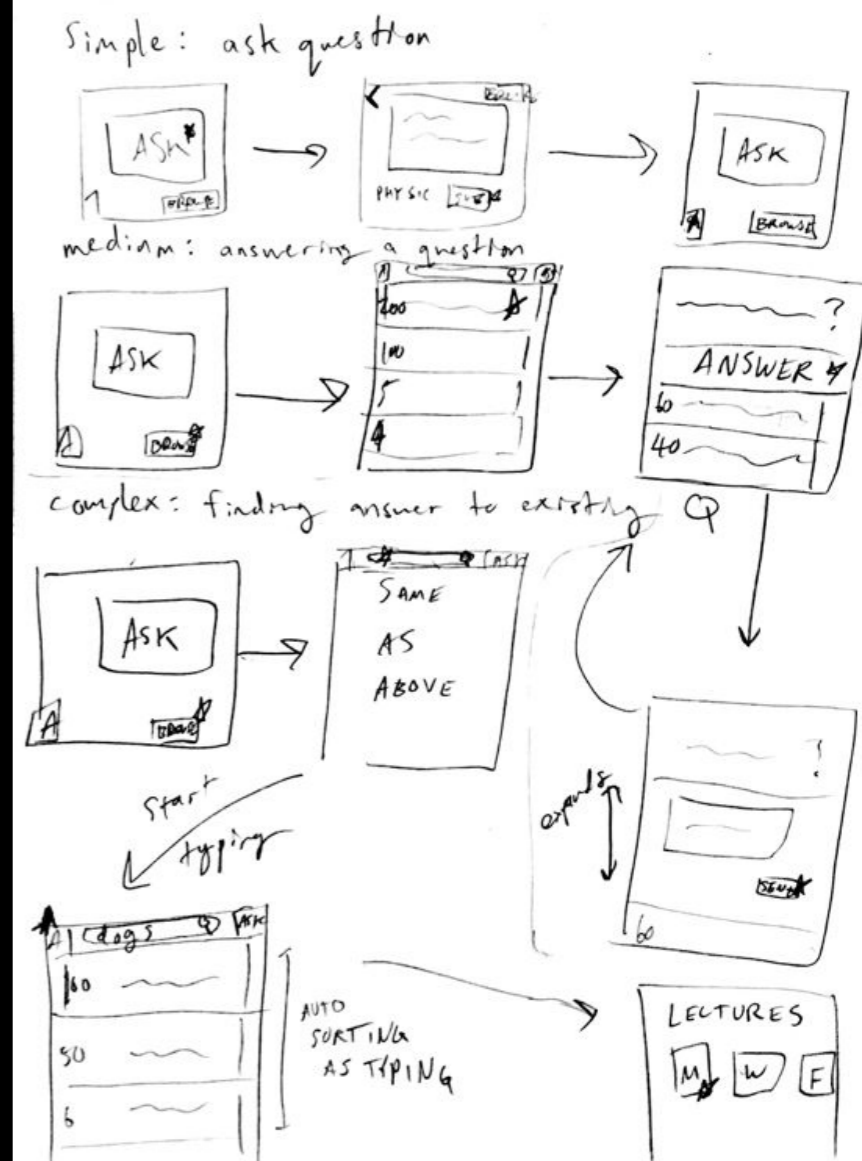

Team Friendship  
Minmin, Santos, Andrés

# Value Proposition

Anonymous in-class asking, ranking and answering questions for college lectures

# UI designs

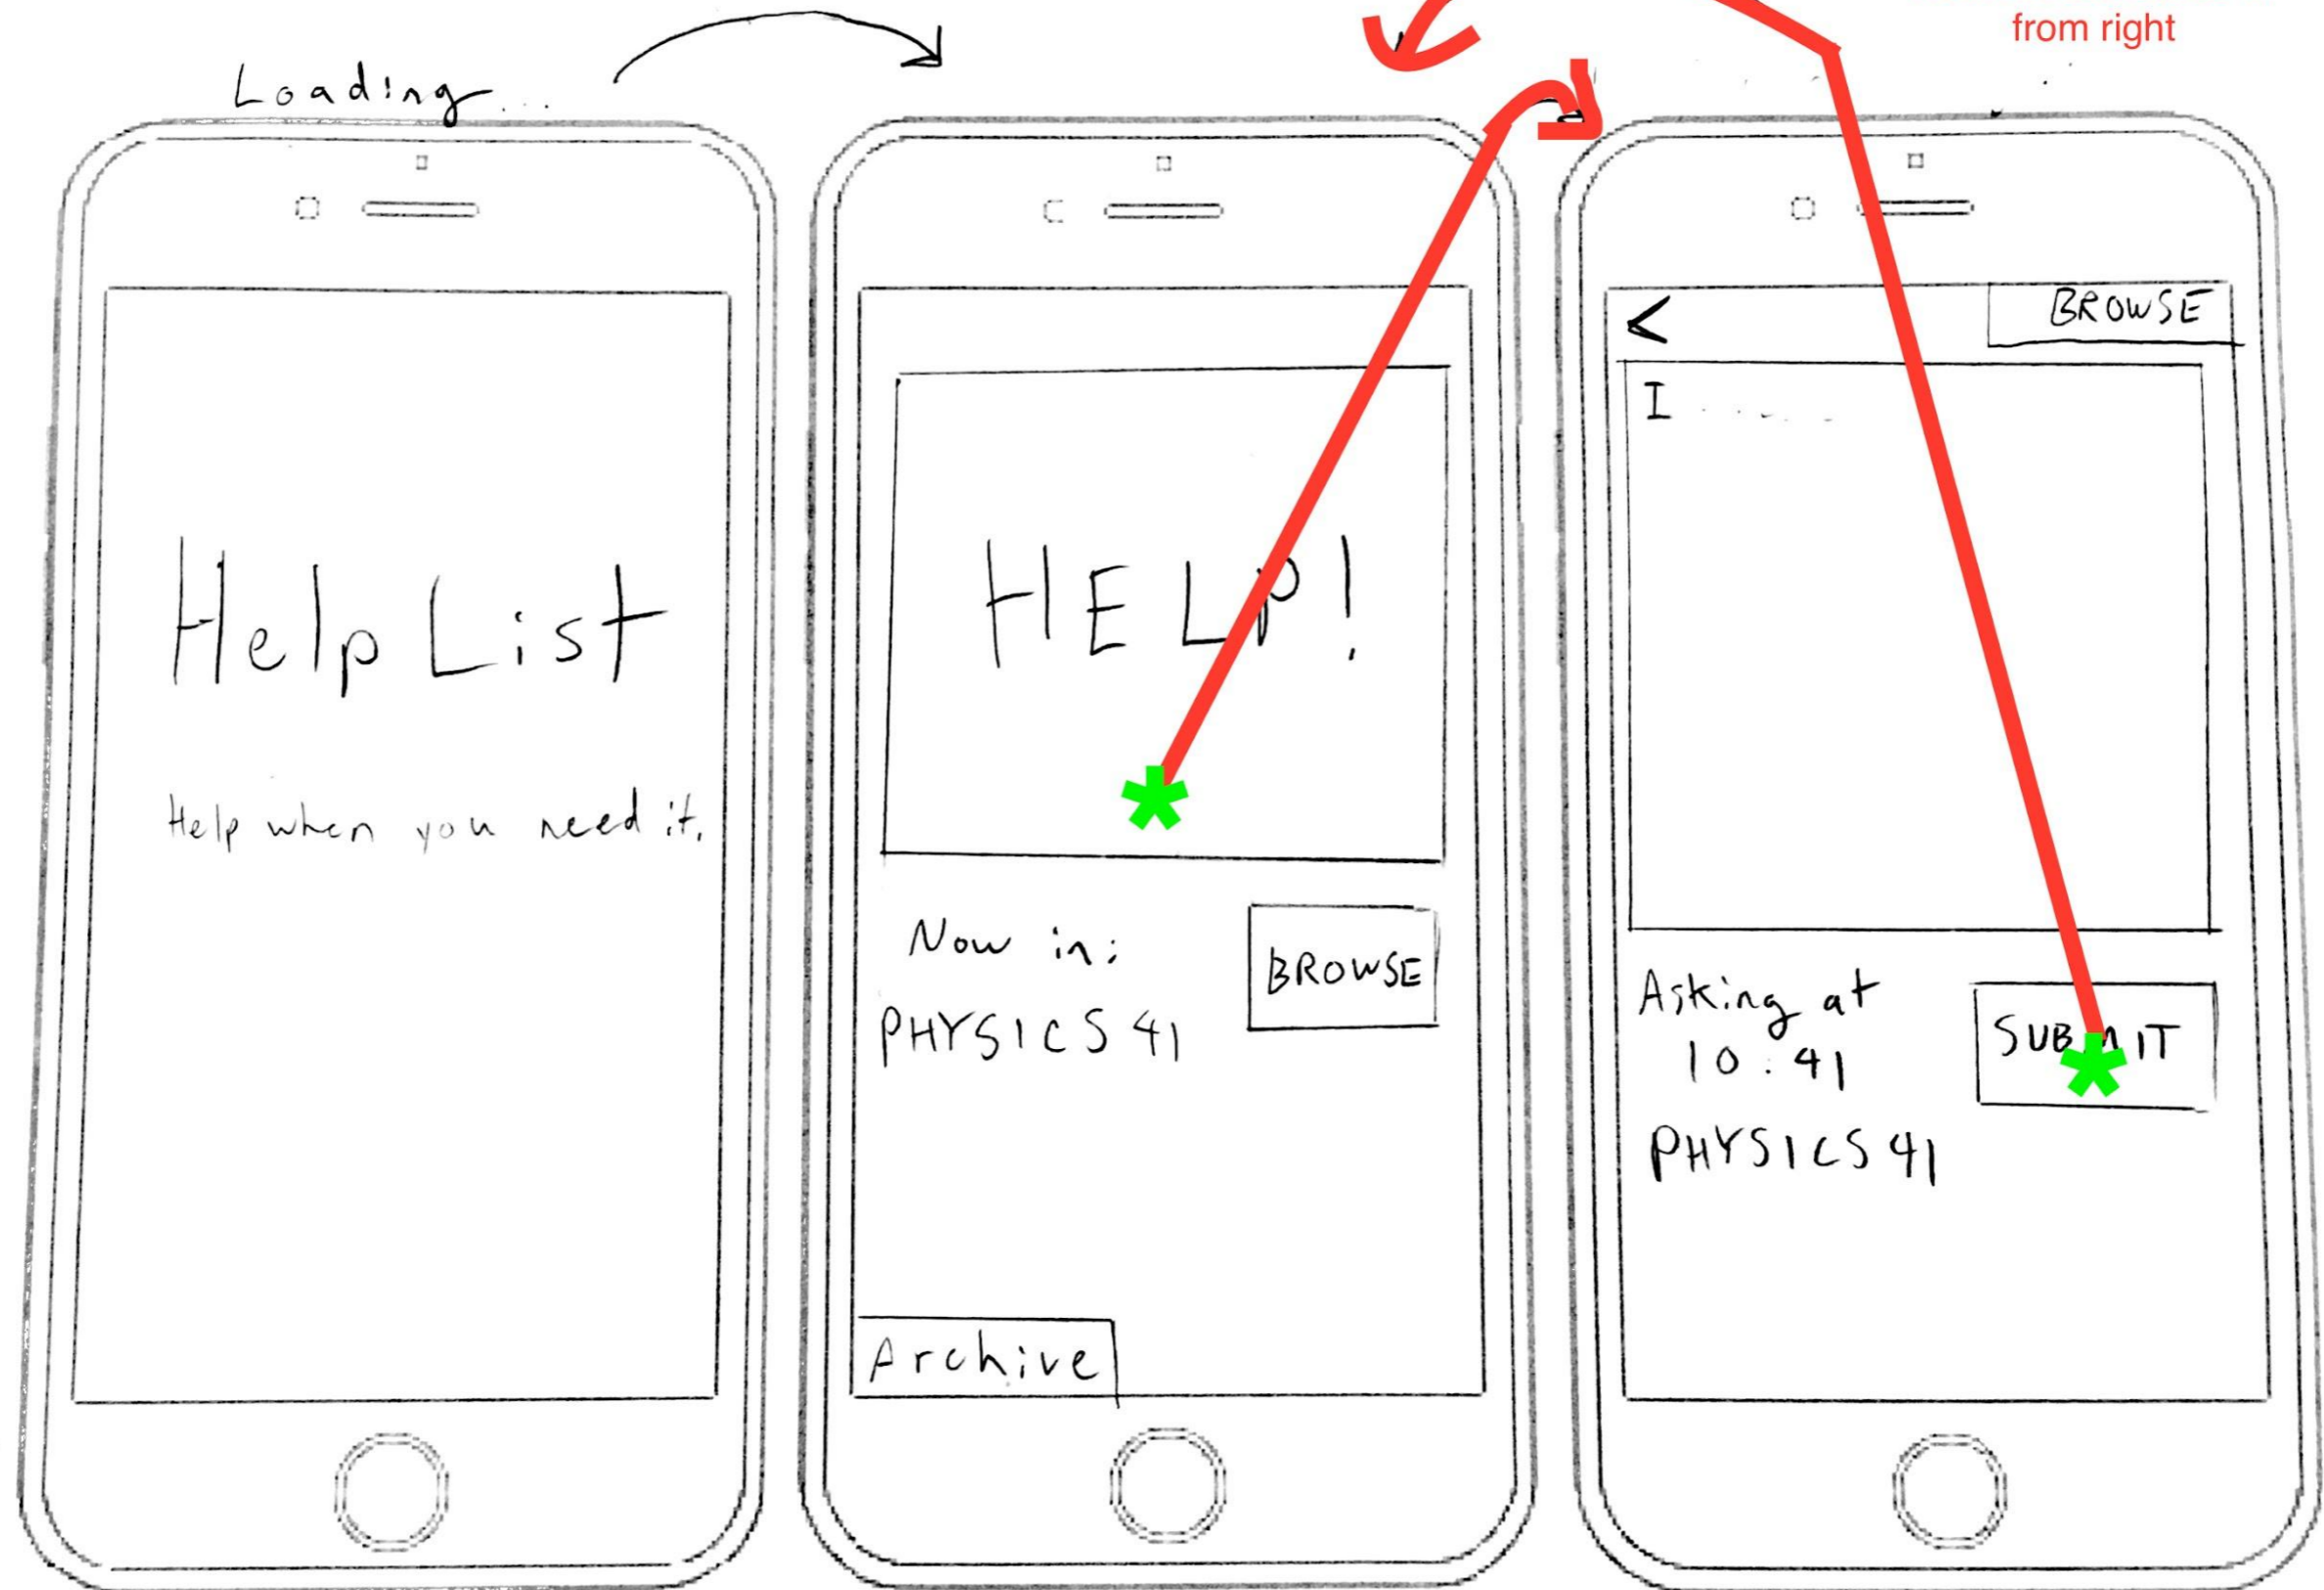

- Mobile app and wearable app
- Mobile is more accessible - more people have access to a smartphone than to a smart watch
- Interface is easier to manage - we would need speech recognition in a watch and that would be disruptive in a classroom

# UI Storyboards

# Simple Task: Ask question

SIMPLE: Ask a question.

\* = touch on screen

# Task 1: Ask questions

# Medium Task: Answer question

MEDIUM: Answer question

# Task 2 Answer QQuestions

# Complex Task: Find previously asked question

COMPLEX: Find an existing question

New screen slides in from right

New screen slides in from right

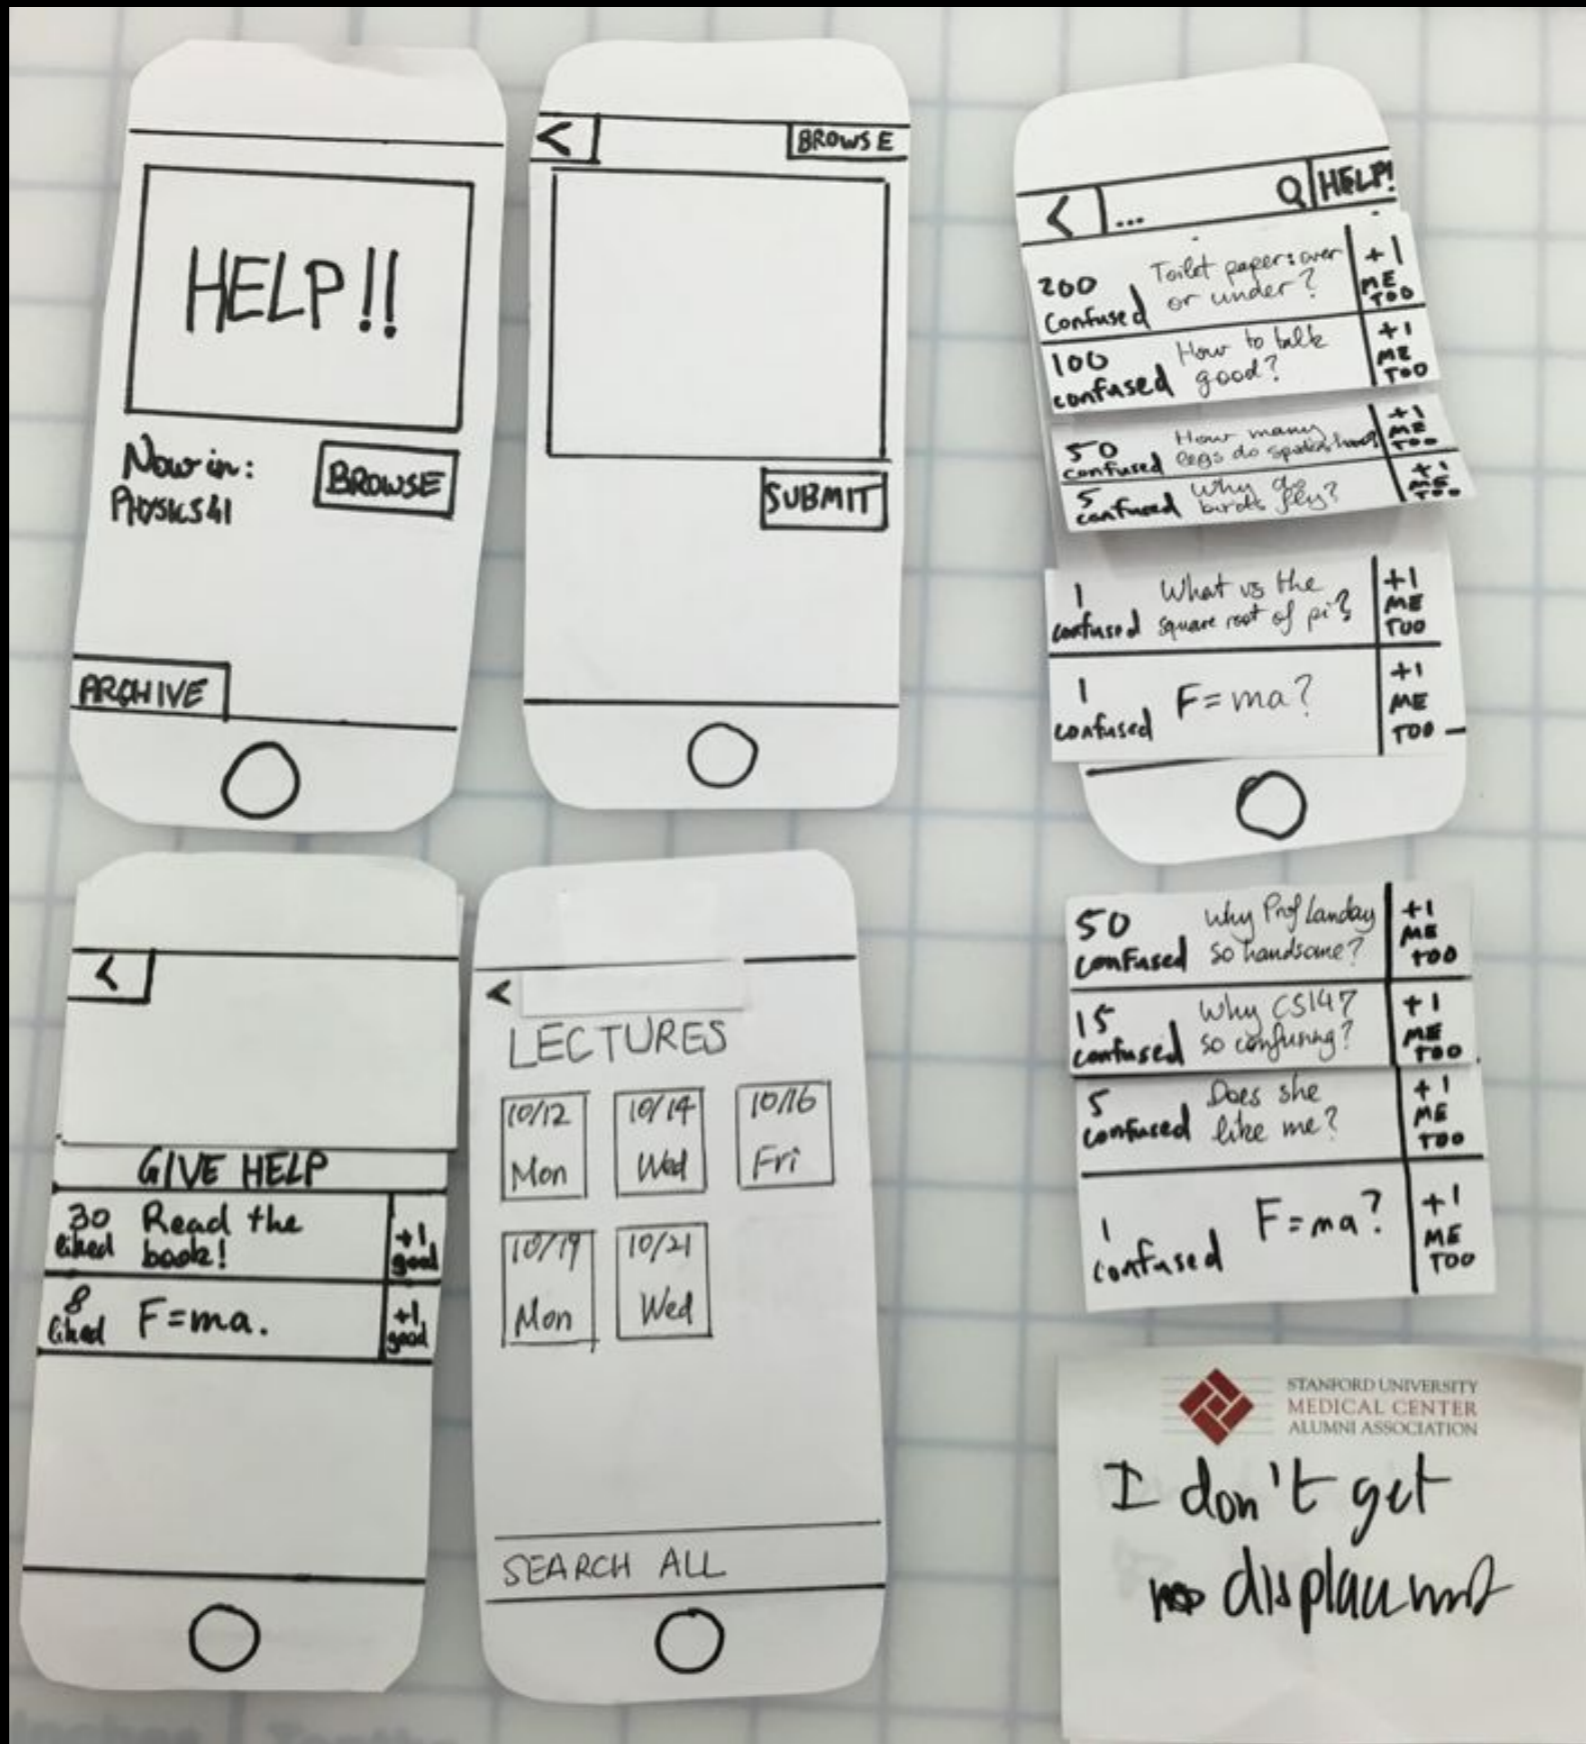

Similar list slides in, this time can query all questions

# Task 3 Find Questions

# Prototype

# Experimental method

- Recruited volunteers outside big lecture halls
- Conducted experiments in lecture
- Santos was the computer, Andrés was the facilitator, Minmin was the notetaker
- We showed them the interface then asked them to perform our three tasks

# Results: Participant 1

Task 1 Ask a question was very easy for him.

# Results: Participant 1

Task 2 Answer a question: He was quick to figure out “Browse” and tapping on question

# Results: Participant 1

Task 3 Find a question:  
Clicked on “back” several times, went through most of the lectures in “Archive”, finally clicked on search all and found the question he was looking for.

# Results: Participant 2

# Results: Participant 2

Task 1: Click on “Browse” instead of “Help”

Task 2: Didn't realize at first how to submit the question, confused by “Give help” after she typed in answer

Task 3: Didn't notice the “Archive” button, and went back and forth several times but eventually used the search function/archives of questions very easily

# Results: Participant 3

The tasks were intuitive for him.

# Discussions

- Cosmetic changes:
- Make “Archive” button more obvious
- Make “Search” bar more obvious
- Make the Help button pop up by using bright color
- Usability changes:
- Change “give help” to “submit” after they start typing
- Make search process simpler and more intuitive

# Summary

- Some cosmetic and usability changes needed
- Participants liked the interactive nature and the anonymity of the app
- Liked the “+1” up-vote button
- Appreciated the simple interface for submitting questions in class
