

Our actual app will have a single login for students, parents, and teachers, but for now we have 3 separate prototypes.

We used Sketch and Marvel to make these prototypes. The instructions are fairly simple: simply follow the link for any of the 3 and it will take you to the Marvel prototype. In Marvel, you can interact with it as you would with a normal app—click on things. Note that you can't interact with everything yet—but if you click on something that isn't interactive, Marvel will highlight the parts that are interactive so you can see.

When you log in as the student, pretend you are Daniel Grau.

Some limitations: in parts that have you enter text, we will have text autocompleted for now. Also, as we said, not everything is interactive yet (i.e. in a table view list of cells, only one cell of each type will be clickable).
