README

Flood Medium-Fi Prototype:
The prototype is hosted on marvel at:
https://marvelapp.com/121f781#8501918

This prototype models interaction between static screen sketches of the flood application. Click or drag on the image to interact with the application. If the area clicked doesn't have an interaction associated, the prototype will highlight hotspots in green. Generally, the name of the screen in the top navigation bar is a safe area to click and discover what can be interacted with.

Implementation limitations:
Since the prototype is static, no typing is possible. On any field where text is expected, skip the text entry and perform the next expected action, i.e. click "login", or "return". The prototype will presume a successful login and pre-generate prototype entries in the shopping list. The barcode scanner is static. Click the barcode to simulate a successful scan, and swipe right elsewhere to exit. The prototype will presume a successful login and pre-generate prototype entries in the shopping list. Since there are no more than 2 prototype entries, the add button
won't do anything once there are two entries in the list
