High-Fi Prototype Instructions:

Thank you for downloading Momenta! We hope you enjoy the prototype. Below are some instructions detailing the installation requirements, operating instructions, and any limitations of the implementations. Enjoy!

Installation Requirements:

- **iPhone 6 Device running iOS 9.1** (**the app was laid out specifically for the iPhone 6 running iOS 9.1. We cannot guarantee the layout will show up correctly on other sized devices or on devices not running iOS 9.1**)
- Mac
- iTunes Installed

Installation Instructions:

- Plug in your [iPhone 6] device to your computer and open iTunes
- Drag the downloaded .ipa file into your iTunes Library
- Sync your device with iTunes

Operating Instructions:

- Upon opening the app, you will see a login screen. This isn't actually implemented so you can either tap login or create account and it will take you into the app. There you will see 4 tabs. On the Talk tab (the initial tab), you can choose your criteria and then you will be matched with someone to talk to immediately. On the Search tab you can search for specific people to talk to by typing in text and/or by choosing "tags" to filter your search. The Favorites tab has a list of contacts that you have favorited. The Me tab has various info specific to you, the user; lists of your upcoming appointments, your recent appointments, and the staff in your dorm or house. It also contains a settings page where you can specify your dorm and any preferences you have.
- By tapping any of the "users" or "profiles" on the Favorites tab, search results, or from the pages on the Me tab, you can view that person's profile. From there you can favorite the person, text or call them, and make an appointment with them by clicking on the calendar icon. After making an appointment, you can view it on the appointments page located in the Me tab.

App Limitations:

- Currently all the profiles and results are hard-coded. No matter what you search for you will get the same results and no matter your criteria on the talk tab, you will get matched

to the same people. Furthermore, the next available times are hard-coded and aren't based on the current time of the day that you are using the app. For example, you might be on the app at 4pm, but someone's profile might say they are available "Today at 2pm".

- The settings and preferences are also hard-coded, and not editable. As well as the past appointment data on the recent screen.
- After making an appointment with a specific person, we don't remove that appointment from the possible appointment times. So you can keep making an appointment multiple times.
- You can not currently delete appointments from the appointments page on the me tab. You can however delete them from the confirmation screen by clicking cancel. The appointments tab also does not automatically update, so if you make an appointment, and then click the Me tab and are already on the appointments page, you just click the back button and then click on appointments again to get the updated data.
- The "Sam Robinson" profile is hard-coded to be favorited, so even if you unfavorited them they will always appear in the favorites.
- Within any of the tabs, if you want to get back to the initial screen, simply press the tab button (the buttons located across the bottom of the screen) again.
