

Impromptu High-Fi Prototype Readme

Chen Luo, Diego Hernandez, Qingping He, John Carlo Buenaflor

Impromptu ("Share Music. Share Surprises.") is a challenge-based social platform for musicians.

Installing Impromptu

1. Download the ipa
2. Open iTunes connect your iPhone
3. Go to manage my iPhone
4. Drag the ipa file into the installed apps section

Limitations of our prototype:

- By "signing in to Facebook," Impromptu is intended to load the user's existing Facebook friends list. Although Impromptu has a button that is intended to take the user to the Facebook app to sign in, this prototype does not actually sign the user into Facebook; instead, friends data is hard-coded.
- Currently updating new cards to the corresponding conversation in the inbox is not supported when there are new videos/challenges requests sent from other users; all contents that are intended to be received from other users is hard-coded in.
- The challenge bank is a small dataset for purpose of demo only.
- Search functionality in friends list is not supported yet.
- When running on an actual device, sound does not play until you record a video. This works fine on the simulator.
- After recording a video, the videos in the feed stop playing. These bugs were too tricky for us to fix in time
