Hi-fi Prototype README

Matthew Chen - Tyler Berbert - Jiawen Gou
December 10, 2016

Our high fidelity prototype was developed in Xcode 8.0 with swift 3.0. It uses the charts library and is available as a .ipa file without the recompiling in bitcode during exporting.

Limitations

This prototype was created for the purpose of demonstrating the design of the final application and thus does not implement much of the back end support that would be needed for actual use. The prototype limitations include the following.

- Hard coded all of the student data, quiz questions, and structure in the back end
- Hard coded the images which were used in both the detailed question view and the detailed student answer views
- The edit button for the due dates in the manage quiz task is not implemented
