Idea Management:

Focused on the Journalists

Trying to make sense of the process

INITIAL POV

We met Mark, who works on HCI research about *understanding creative decisions*. We were surprised to learn that he writes ideas down during the day and processes them *en masse* at night. It would be game-changing if we could find *optimal times* during the day to fully flesh them out.

Additional Needfinding

"Can you tell me about how you **research** a lead?"

"How did you get the idea for your **last published** piece?"

"Are there common **bottlenecks** while writing a piece?"

Heather W.

Experienced Reporter and Emmy-Winning
TV producer

- Journalism is not a fine-tuned, organized process.
- Counterfeit drugs
 - Managing sources
 - Juggling stories

Dieter Kurtenbach

Experienced sports journalist with experience at several levels

- Interviewing the Warriors about their **team culture**
- Identifying **key facts and figures** (e.g. quotes, statistics)

Julia Ingram

Managing editor, Stanford Daily News

- Managed **Newsroom** during SCR event
- Newsroom moves fast
- **Responsibility** of final product goes to top people

River Grace

Science writer and musician

- Came up with a lyric for a song, but the **phone rang**
- Idea capture is difficult but crucial

Elena Shao

Amateur political journalist, Stanford Daily News

- Panel on Russian foreign policy
- People write articles about what they're interested in

Revised POV #1

We met Heather, an **experienced journalist** and book writer. We were surprised to hear that she **wanted more structure** when dealing with **longer-term** projects. It would be game-changing to provide a **default template** for capturing every piece of information.

Revised POV #2

We met Eddy, a **goal-oriented** researcher. We were surprised to hear that he had **trouble managing leads** for research projects, yet refused to rely on **technical solutions** (such as note-taking apps) to manage them. It would be game-changing to offer the benefits of **organization** that technology brings while ensuring that the user always feels in control of their own **thought process.**

Revised POV #3

We met Bill, who has decades of experience consulting companies about **innovation** and **technological foresight**. We were surprised to learn that companies often **forget about projects** that they've delegated teams to work on. It would be game-changing to give managers **updates without adding stress** to the employees' workflow

Heather's POV

How might we keep all the information for a story in one *unified* place?

Solution: Create a *template*

Heather's POV

How might we keep all the information for a story in one unified place?

Solution: Create a template

How might we augment the *creative* process of writers using technology?

Solution: Have the story ideas come up *sequentially* for user processing

Eddy's POV

How might we help people take advantage of *pen-and-paper* methods?

Solution: Streamline the idea
input process

Solution 1: Create a template

Assumption: **Reaching out** is a bottleneck

We asked: "who should I **talk to next?**"

- 3 responses

Solution 1: Create a template

Assumption: **Reaching out** is a bottleneck

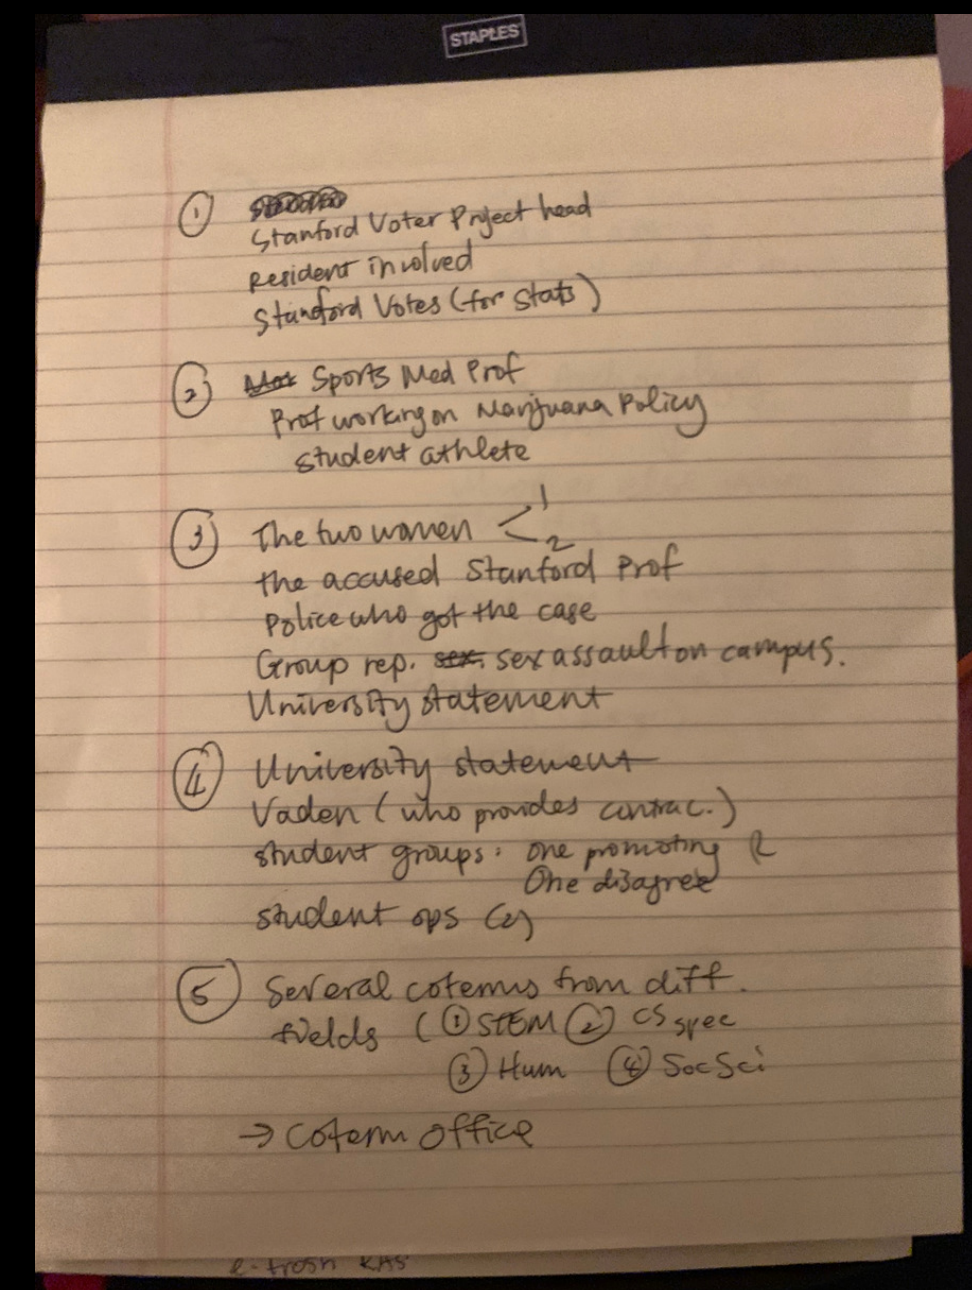

We asked: "who should I talk to next?"

- 3 responses

45 seconds or less

Experience = speed

Solution 1: Create a template

Assumption: **Reaching out** is a bottleneck

Takeaways:

- "We should make **new staffers** do this"
- Very fast
- Headlines insufficient

Solution 1: Create a template

Assumption: **Reaching out** is a bottleneck

Takeaways:

- "We should make **new staffers do this**"
- Trained early
- Very fast
- Headlines insufficient
- Ultimate discovery about finding people
- Key takeaway: more than a **headline**

Solution 2: Sequential idea processing

Assumption: Take it **one at a time**

Gave two sets of questions

- 10 minute total

Solution 2: Sequential idea processing

Assumption: Take it **one at a time**

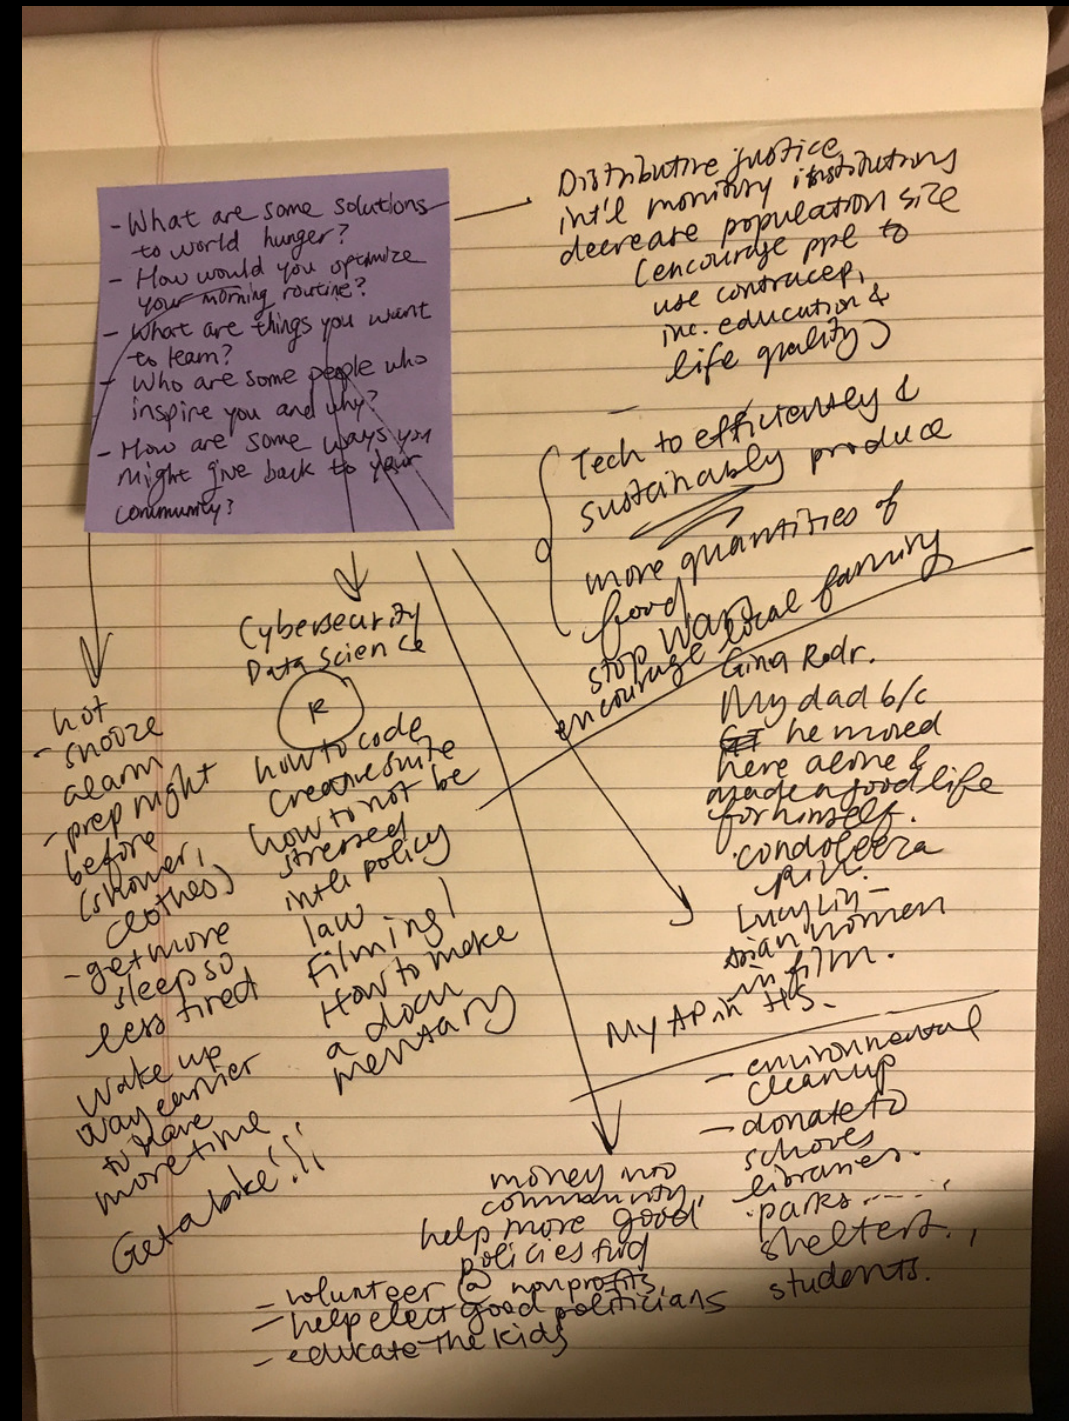

Gets of questions

- 10 minute total

Quantity and quality

Lots of **body language**

- ① - effective altruism??
 - widespread philanthropy
 - decrease my waste
 - donating food
 - soup kitchens!?
- ② - count backwards
 - pick out clothes night before
 - get up at first alarm
 - eat breakfast on the go
 - finish work night before
- ③ - how to work w/ large datasets
 - whatever's on my porch midterm tomorrow??
 - developmental psychology
 - how to read poetry
 - art history
 - graphic design
 - statistics
 - photography skills
 - how to be a better ME
- ④ - Courtney extremely effective leader
 - my mom - really strong person
 - Jane - always on top of her life
 - Sharon - stands up for what she believes in
 - my English TA from last year because he seems so just know everything (English lit related)

Solution 2: Sequential idea processing

Assumption: Take it **one at a time**

Takeaways:

- Visible and **audible** difference
- Different in every way
- Too much **emotion**?

Solution 2: Sequential idea processing

Assumption: Take it **one at a time**

Takeaways:

- Visible and audible difference
- Different in every way
- More than what we expected
- Couldn't focus on one
- Too much emotion?
- Journal one by one
- **Cycling** through?

Solution 3: Streamlining input

Assumption: Ideas **on the go**

Get people putting down
their ideas

- in writing, "**Ideaman**"

Solution 3: Streamlining input

Assumption: Ideas **on the go**

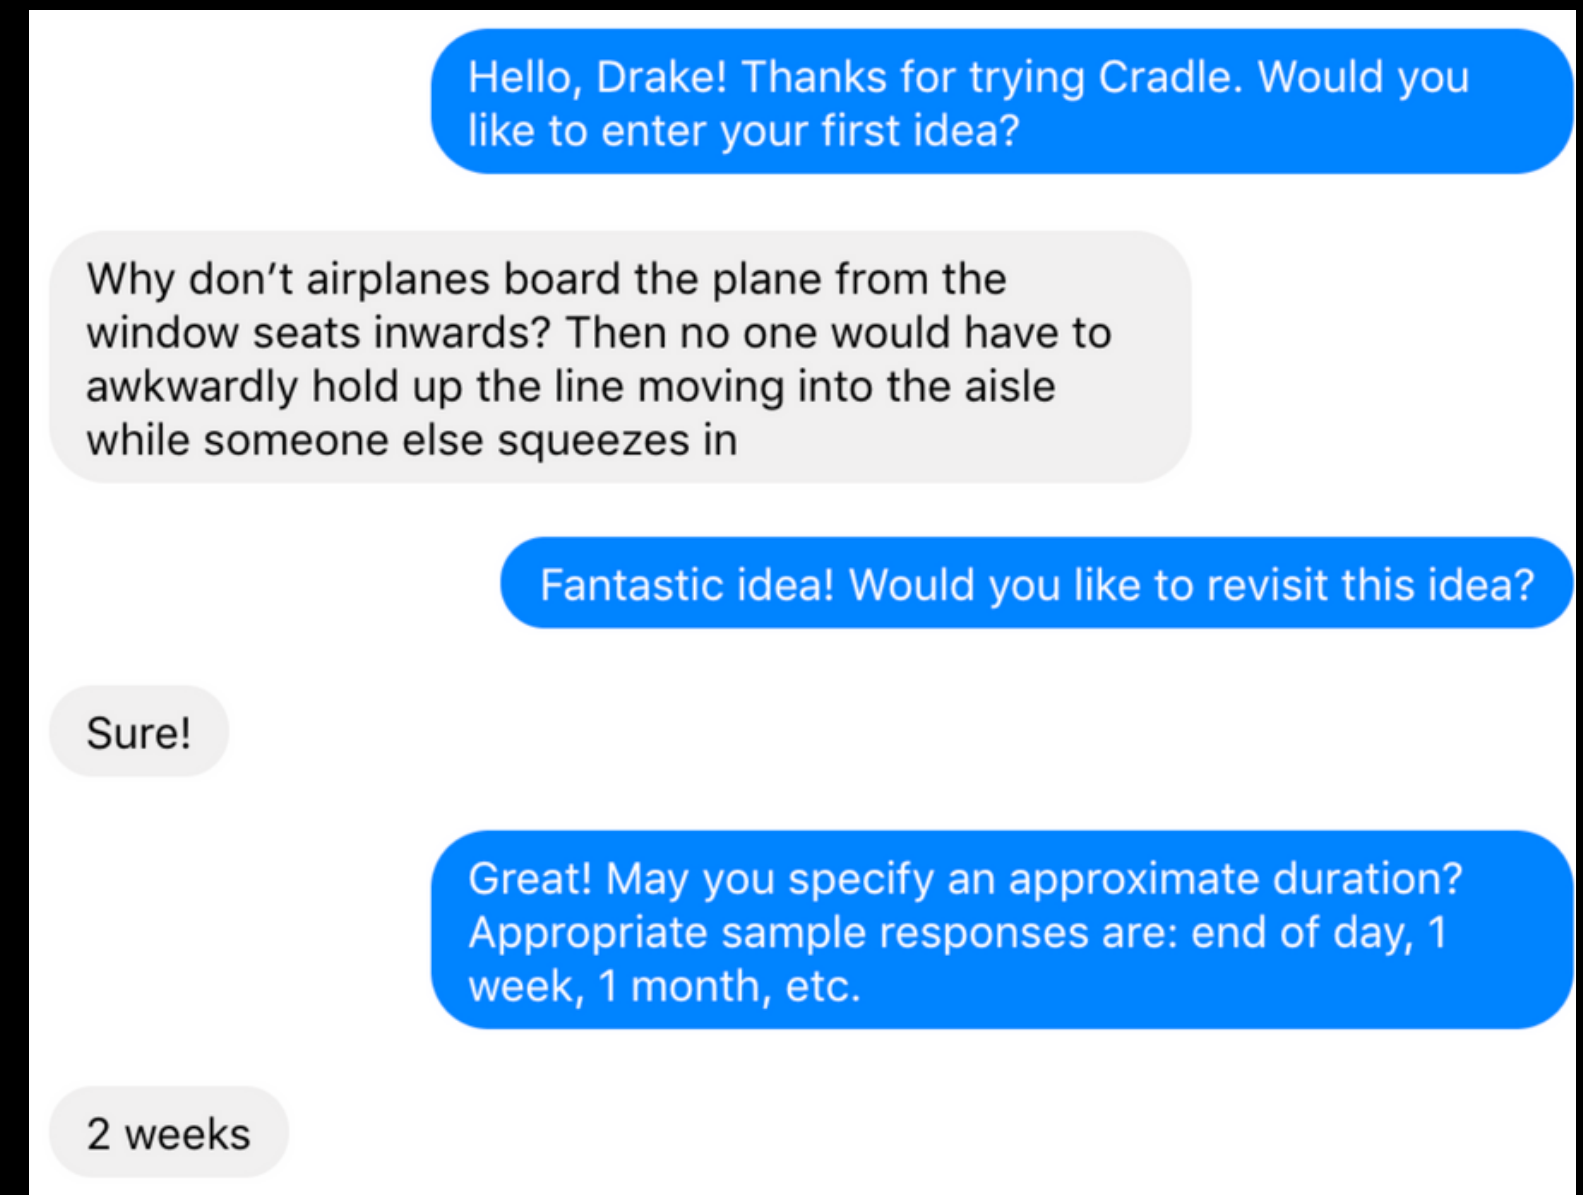

Get people putting down
their ideas

- in writing, "Ideaman"

Lots of ideas

Accessibility/Conversation
style

Solution 3: Streamlining input

Assumption: Ideas **on the go**

Takeaways:

- Conversation sparked ideas
- Fun!
- Ideas weren't **private**

Solution 3: Streamlining input

Assumption: Ideas **on the go**

Takeaways:

- Conversation sparked ideas
- Fun!
- Already, people **polished** ideas more
- Clusters
- Ideas weren't **private**
- Simple doesn't mean useless
- **Now what?**

Summary

Now what?

- Focusing topic
- POVs
- Assumptions:
- Getting excited
- Finding people is a bottleneck
- Work on one idea at a time
- Ideas at any time

Questions?

Thank you!
