

Assignment 6

Low-fi Prototyping & Pilot Usability Testing

Paulina R, Kristina I, Sanura N, Jailene M

OPERATING INSTRUCTIONS:

- For this medium-fi prototype, we used Figma and Sketch for the mobile app prototype. The mobile application prototype emulate an iPhone 8. Sketch was used to create the look of each screen. Figma highlights clickable areas so users can click on buttons and icons on each page to navigate to a different page.

Limitations/Tradeoffs

- There is no actual data collection or synthesis going on
- The synthesized data displayed is simply a visual created through Sketch not representing any actual data

Wizard of Oz Techniques

- The box plot is already generated and does not use any data synthesis
- The historical data of each student does not come from actual data but is displayed a representative visual

Hard-Coded Features

- The answers to the prompts are hard-coded to show how this data would be displayed to the teacher/student if the information were actually gathered
