

FlexiVoice

Make voice interaction work for you!

Esther Goldstein, Rachel Jorgensen, Ron Tep

Problem/Solution Overview

- People want to be flexible in how they interact with their smart devices
- Our app allows you to:
 - Keep track of your devices
 - Define your own commands
 - Share information about your devices with others

Tasks

Help my visitors interact with my smart devices (simple)

- Sheila: owns a smart home and rents out a room with Airbnb.
- Visitors don't know how to turn on the smart devices
- Wants a way to inform her guests what to say to her Google home in order to turn on the lights and other appliances

Say what I want to my voice assistant (medium)

- Hunter: working professional who uses Amazon Echo
- Frustrated when he expects a command to be one thing but learns it's something else
- Example: wants to say “Alexa, turn on my living room fan” instead of “Alexa, turn on Dyson.”

Keep track of my smart devices (complex)

- Lily: rents a house with her friends
- Forgets which device is in which room when giving a command
- Wants way to keep track of which devices they have, where they're located
- Wants to know statistics on the devices and find the one closest to her
