

Operating Instructions

Download the expo mobile app and scan the following QR code to immediately open it. Our app was designed to work best on an iPhone X, iPhone XR, or iPhone 11. For more information and alternative download links, you can visit the expo link here: <https://expo.io/@team2fit/2Fit>

Limitations

Since this app is ultimately only a prototype, it has a few limitations:

- All user information is hardcoded. This includes the user's profile as well as the profiles of other users.
- Any interactions with other services, such as Google Maps or Google Calendar, are excluded. Dates and locations are hard-coded.
- There are no other users, and any interactions with them (like buddy requests and workout requests) are simulated.
- Minor features that aren't core to the main tasks of finding buddies, scheduling workouts, and joining events, have not been implemented (such as canceling workouts, deleting buddies, creating events, and filtering events by activities).
