High-Fi Prototype Instructions

Peter B., Will B., Sejal J., Dhara Y.

Installing and accessing the prototype

We built our prototype using React Native through Expo. The project link is accessible [here](#). We tested it using iOS on the iPhone 11 and 12 (either one will work). The features work through the Expo Go App as well as the xCode emulator.

Hard-Coded Elements

Almost all of the content is hard-coded. At a high level we created accounts and comments from fake users in order to populate the interface, so any content that is not explicitly entered by the user was hard-coded by the development team. In addition to hard-coded comments and users, fan users can only follow a limited list of creators composed of rachel_f and some celebrity chefs. While users are able to create their own studios (as a creator) and post their own ideas (as a fan), these actions do not affect any underlying state beyond appearing in the creator home screen.

Limitations

1. There is no creator login. All users assume the rachel_f persona.
2. While there is a flow for deleting a studio by clicking on the three dots in the bottom right corner of a card, it does not actually delete the studio.
3. The hard-coded elements listed above limit the interactivity of the product. In addition, the state of studios do not evolve over time. Concretely, the brainstorming studios in both fan and creator views do not become ranking studios over time -- each time the evaluator enters the app, they will be presented with the same studios in the same state.
4. Users are not able to change their profile picture -- everyone is John Lennon.
