

# Sex Academy

## README

### Hi-Fi Prototype

### How To Use

Sex Academy is an iOS app about sex education. It was designed on iPhone 11 Pro Max. You can run our app on an iPhone with Expo package manager or on a computer with an Expo Cli installed on it.

#### Instructions:

Accessing the QR needed to run the app on your iPhone:

[We assume you have Expo Cli installed on your computer. Otherwise refer to this <https://expo.io/tools>]

- Download the project repository (in zip file) to your computer.
- Unzip the file.
- Go to the unzipped file directory.
- Open the terminal in that directory.
- Press 'npm install' and hit enter. This downloads all necessary packages for running the app.
- Once 'npm install' is executed (will take at most a minute), run 'expo start'. This starts the expo server that runs the project.

#### Opening the app on your iPhone:

- Download Expo Go or Expo from App Store.

- Expo will show you a QR code on the terminal. With your iPhone, you can scan this QR by pointing its camera to this QR.
- Once you scan the QR with iPhone's camera, your iPhone will be redirected to Sex Academy.

Enjoy!

### Implementation:

The app was built using React Native, Expo Cli. The design was done on Figma using inspiring from Contra Wireframes.

## Limitations

Due to time constraints, some minor glitches remain in the app:

- Email or Login authentication is not done.
- The chat app does not render with next texts being sent. It is just for demonstration as of yet.
- Audio or Video uploading options are not present yet. The view is the same for general feed so it's a Wizard of Oz.
- The current navigation lets you go back to Login page even after logging in.
- User information like their name and who they are matched to.

## Hard-coded Items

Since this is a prototype, many elements are hard coded as of yet:

- The content displayed in Feed for the user.
- The Audio Tab and Video tab displays the same feed.
- The content submitted when the user finishes uploading their own content by clicking the plus icon on the bottom bar.
- The peer matching chat app functionality is hard coded and only the design is shown.
