

# memo

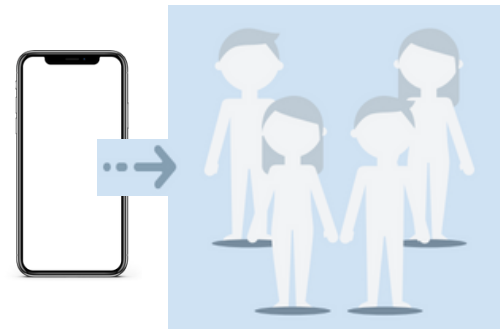

TAKE A SCROLL DOWN MEMORY LANE

## Development Process

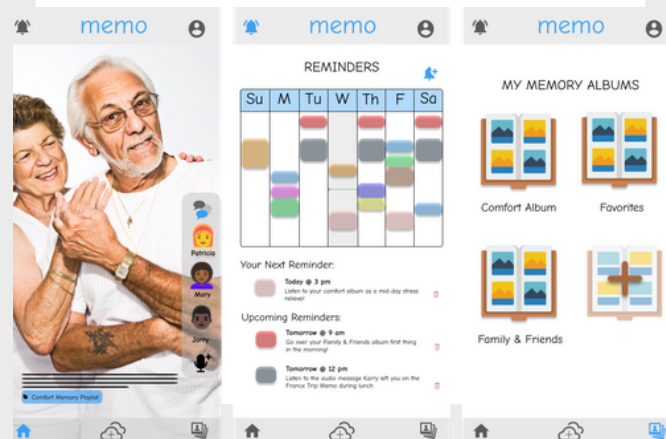

### Needfinding

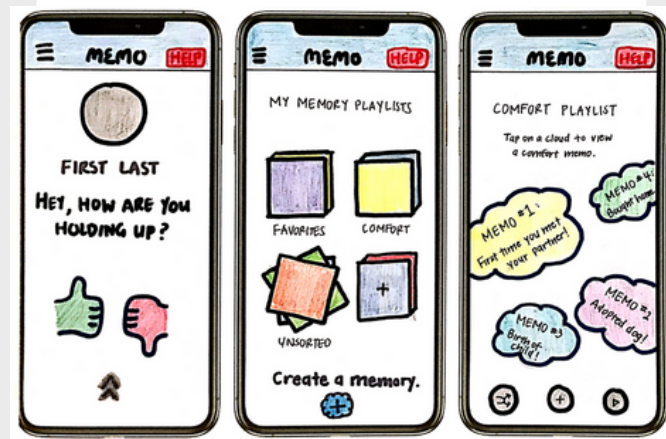

### Fieldwork + Testing

### Med-fi Prototyping

### Low-fi Prototyping

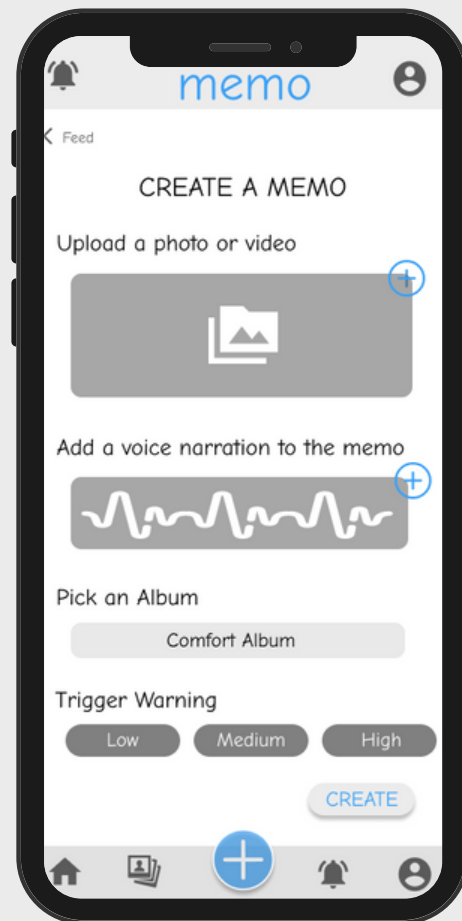

## Problem

Dementia patients and their caregivers find it challenging to record and reflect on their life because memory artifacts such as photos and videos are often scattered and preserve no context.

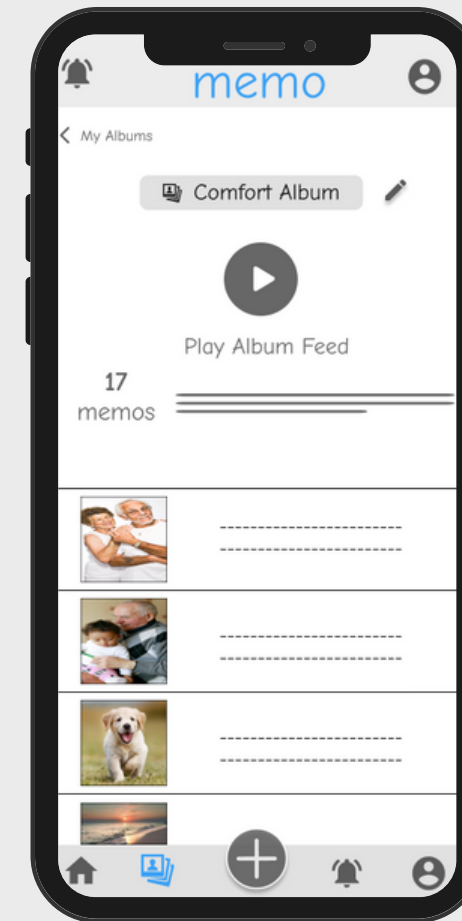

## Solution

An interactive life storybook that collects all sensory media into one place and allows loved ones to add their own stories to memories to keep memory-impaired individuals engaged and connected.

Create a memo & add personal audio narration

View memos all in one place

Categorize memos into albums
