

README

Hi-Fi Prototype

We used React Native and Expo to create our hi-fi prototype. It has been tested in the Xcode simulator (iPhone 12) and on physical devices.

Prerequisites

- Npm installed
- Expo installed
- Xcode Simulator installed

How to Use

This project is a bit different from other expo projects because we had to eject our app from expo and develop some of it in react-native.

This project can be run by typing the following commands:

1. git clone <https://github.com/annietma/cherry>
2. cd cherry/
3. git checkout dev
4. npm install
5. expo run:ios

Limitations

1. Communication with other users is faked, except for the reply function when reading responses.
2. Audio Response: No voice recording functionality (expo limitation).
3. Question Bank is hardcoded and limited in size.
4. Rapid Fire back and forth responses are staged.
