

# JOURNY

Building stronger teams through collaborative journaling

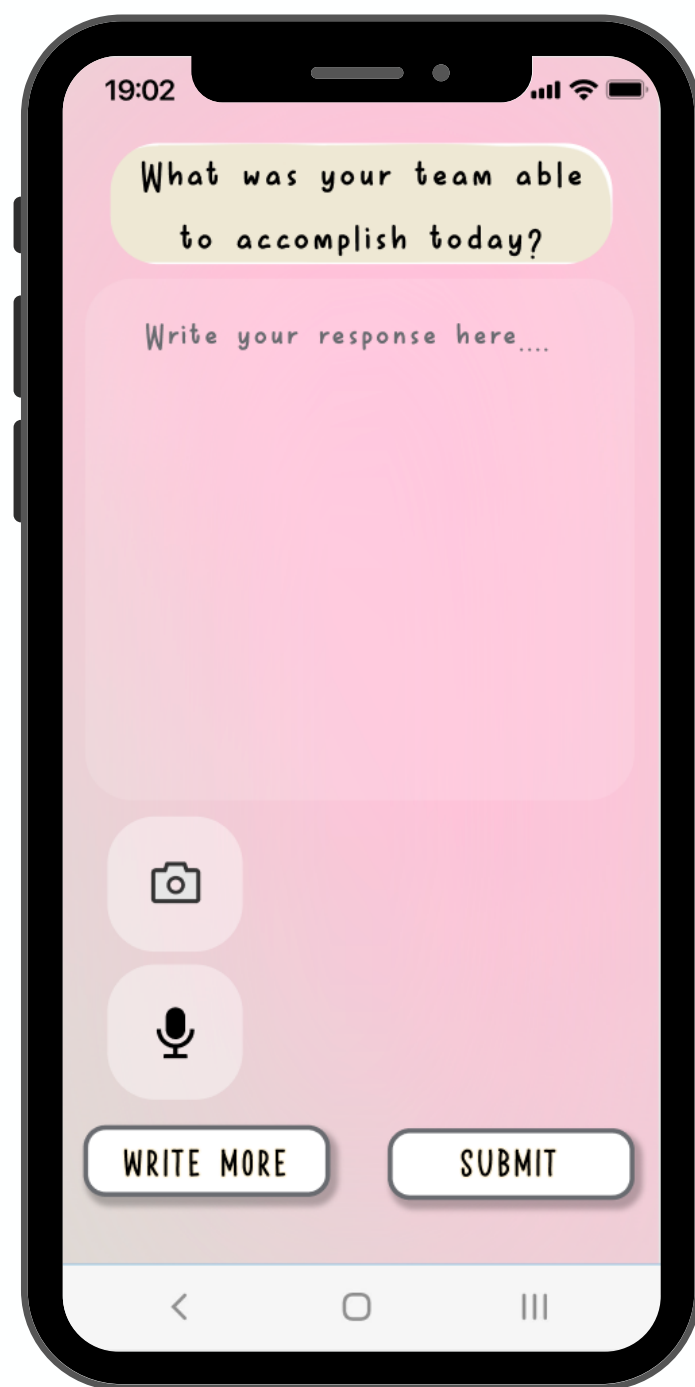

## PROBLEM

It is difficult for **teams** and **facilitators** to **monitor collaboration** in hybrid settings

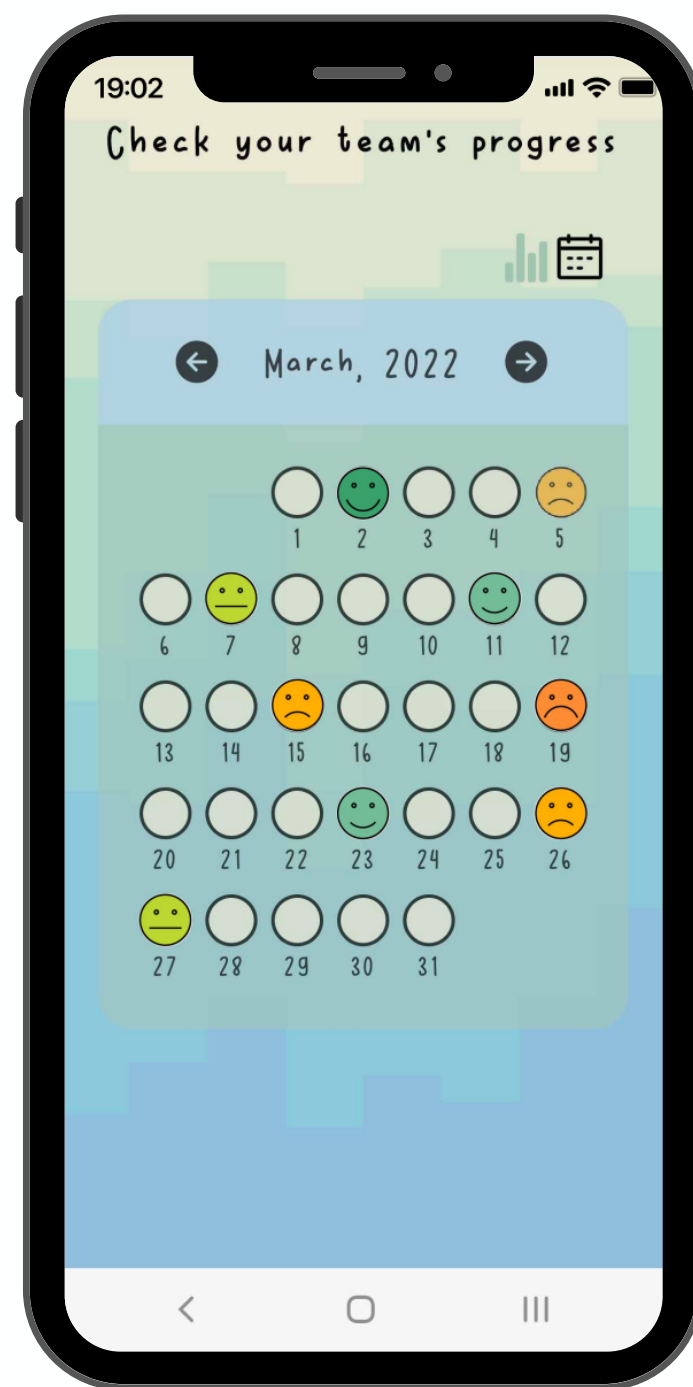

## SOLUTION

A collaborative journaling app to help facilitators and teams **communicate** honestly, build **trust**, and **empathize** with each other

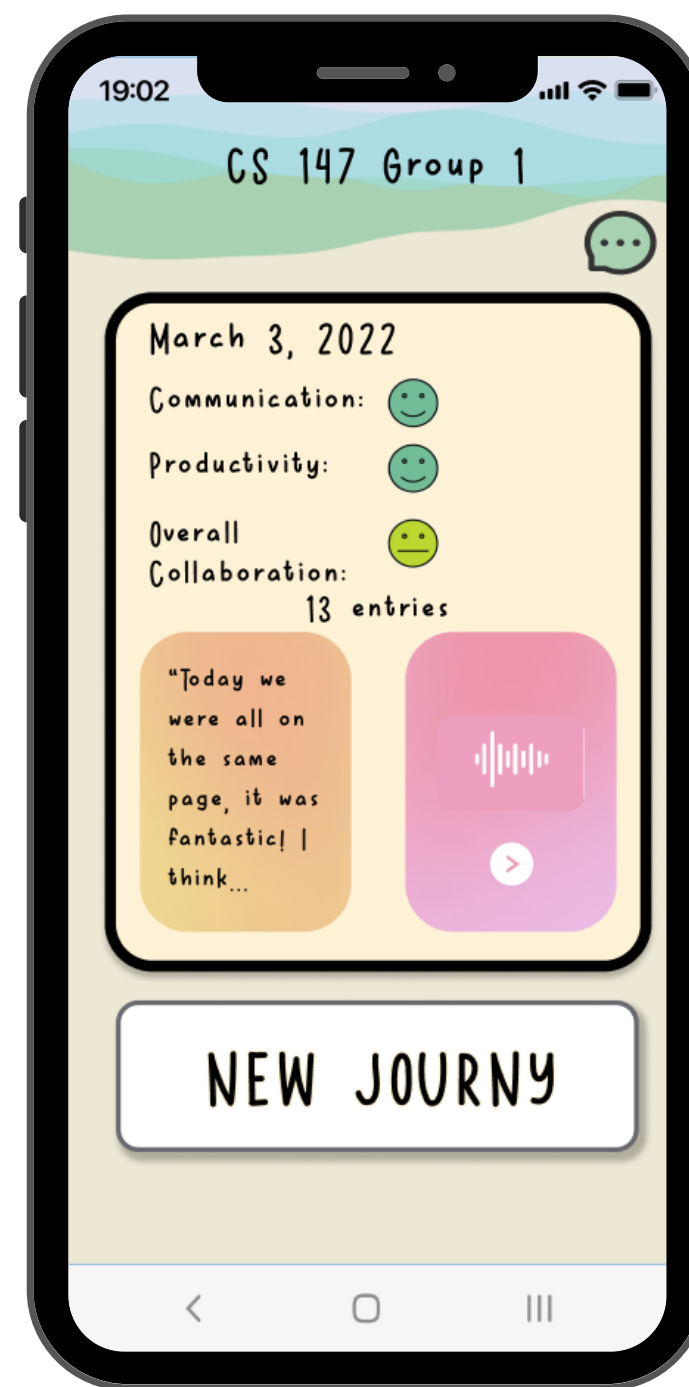

### Journal Entry

## KEY FEATURES

## DESIGN PROCESS

### Needfinding

"I've read a lot about what makes for good teams."	"If people in breakout rooms were able to signal when they want the facilitator to enter the room, I would feel more invited."	<b>Say</b>	He doesn't incorporate his research into his teaching practice often enough	Teaching is about trade-offs	He needs better online monitoring tools
"Walking around a room and being curious about a conversation that's happening, stopping in, feels a little more natural."	"Monitoring how people are talking to each other feels more invasive."	<b>Think</b>	Teams do not utilize norms well	Students should receive feedback every time they do thoughtful work	If he's good at teaching something, he should teach it again
Assigns peer feedback opportunities to improve teaching load	Monitors in-person collaboration more closely	<b>Do</b>	Stays in the main Zoom rooms during breakout sessions	Unlimited to join online collaborative sessions	More equipped to monitor in-person collaboration
Assesses energy and productivity of in-person teams	Plans next steps while groups are collaborating	<b>Feel</b>	Researches peer-to-peer learning	Less pressing need to monitor teams in trusts	More resigned during online monitoring
					Passionate about his research and job

### User Testing
