Interface Hall of Fame or Shame?

Dyson AirBlade hand dryer
example courtesy of Maya I.

Interface Hall of Fame or Shame?

Good

- shape indicates function
- so simple that instructions fit in 1 image
- fun!

Bad

- dripping water?
- too much noise
- still takes too long

Dyson AirBlade hand dryer
example courtesy of Maya I.

Interface Hall of Fame!

Good

- shape indicates function
- so simple that instructions fit in 1 image
- fun!

Bad

- dripping water?
- too much noise
- still takes too long

Dyson AirBlade hand dryer
example courtesy of Maya I.

Can We Do Better?

Good

- Integrate hand dryer into sinks...

Early Stage (lo-fi & med-fi) Prototyping

Prof. James A. Landay
Computer Science Department
Stanford University

Autumn 2024

October 16, 2024

Music: <https://soundcloud.com/dansuneroquette>

Outline

- Sketching vs. Storyboarding
- Prototyping
- Low-fi prototyping
- Conducting a low-fi test
- Medium-fi prototyping

Sketches & Storyboards

- Where do storyboards come from?
 - film & animation
- Give you a “script” of important events
 - leave out the details
 - concentrate on the important interactions

©LFL 1982

REVISED SEP 8 1982

N

DESCRIPTION: EXT. FOREST - MS LUKE & LEIA - TRUCKING
 Luke & Leia coming toward camera. Behind them,
 Biker #3 & Biker #4 bank in, chasing.

NOTES:

ELEMENTS:	STAGE	ANIM	PLATE	MATTE	NON-FLM
Forest			X		
Luke			X		
Leia			X		
Biker #3	X				
Biker #4	X

What is a Prototype?

“A prototype is an early sample or model built to test a concept or process or to act as a thing to be replicated or learned from.”
– Wikipedia

CS147 definition: a working representation of a final artifact

<http://www.computerhistory.org/collections/accession/102716262>

Types of Prototypes

Prototypes are concrete **representations** of a design

Prototype dimensions

- representation: form of the prototype
 - off-line (paper) or on-line (software)
- precision: level of detail (e.g., informal or polished)

Types of Prototypes

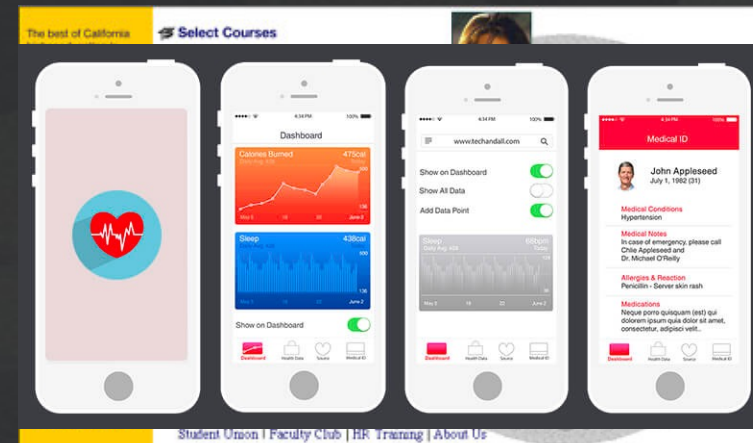

Prototypes are concrete **representations** of a design

Prototype dimensions

- representation: form of the prototype
 - off-line (paper) or on-line (software)
- precision: level of detail (e.g., informal or polished)
- interactivity: watch-only to fully interactive
 - fixed prototype (video clips)
 - fixed-path prototype (each step triggered by specified actions)
 - at extreme could be 1 path
 - open prototype (real, but limited error handling or performance)
- evolution: expected life cycle of prototype
 - e.g., throw away or iterative

Fidelity in Prototyping

- Fidelity refers to the level of detail
- High fidelity?
 - prototypes look like the final product
- Low fidelity?
 - (often) sketched renditions with many details missing

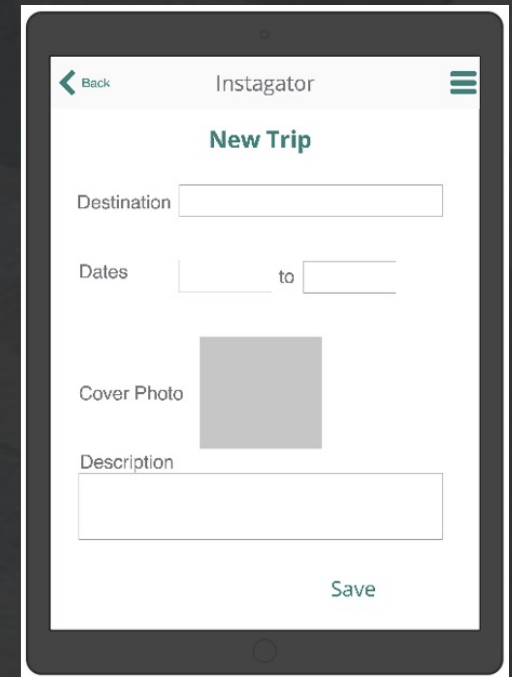

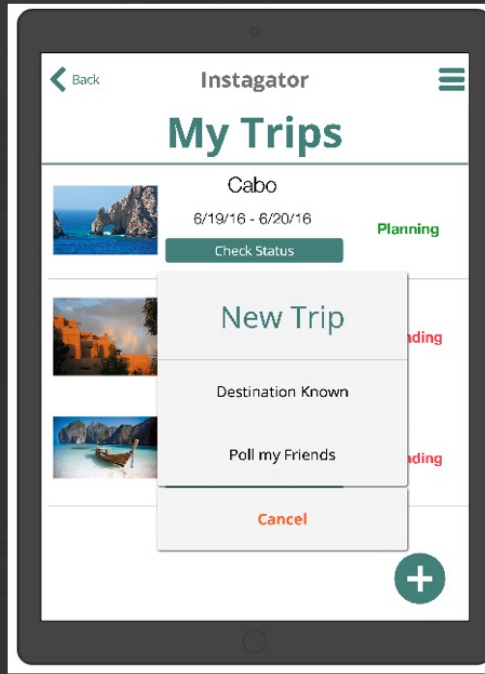

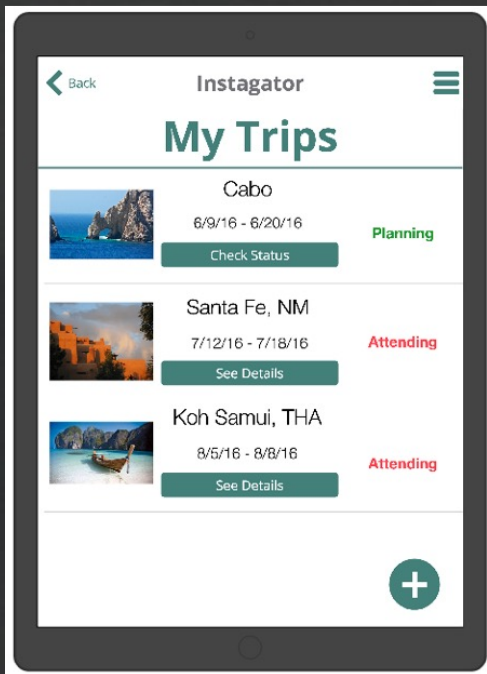

What do we like about this low-fi prototype?

What do we wish could be improved?

What do we like about this medium-fi prototype?

What do we wish could be improved?

The feedback you get is different

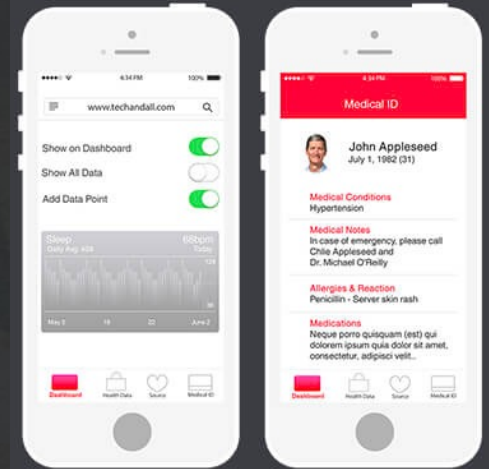

Low-fi

Medium-fi

Hi-fi Prototypes Warp

- Perceptions of the tester/reviewer
 - representation communicates **“finished”**
 - comments focus on color, fonts & alignment
- Time of the designer
 - encourage **precision**
 - specifying details takes more time
- Creativity of the designer
 - lose track of the **big picture**

Why Use Low-fi Prototypes?

- Traditional methods take too long
 - sketches → **prototype** → evaluate → iterate
- Can instead simulate the prototype
 - sketches → evaluate → iterate
 - sketches act as prototypes
 - designer “plays computer”; others observe & record
- Kindergarten building skills
 - allows non-programmers to participate

Cookable

◀ Back Caesar Salad

2 cloves garlic, finely chopped

< 3 anchovy fillets >

1/2 lemon juiced

2 tablespoons red wine vinegar

1 tablespoon Dijon mustard

1 egg yolk

1 dash Worcestershire sauce

< 1/4 cup olive oil >

1 pinch salt and ground black pepper

1/2 head romain lettuce, chopped

< 1/4 cup grated parmesan cheese >

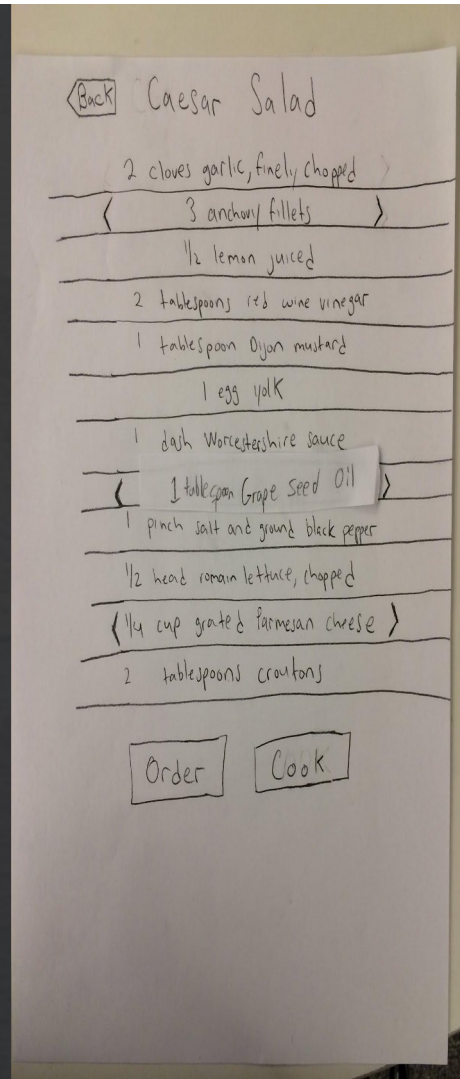

2 tablespoons croutons

- Video slide deck

- Add/Check these slack channels

- #ask-for-feedback (feedback from peers and CAs as they get time)
- #slack-overflow (crowdsourcing tech support – web site and reactive native)
- If you help your peers in a significant way, we can raise your class participation grade

- Figma Workshop on Mon. went well! Check web site for recording if you missed it

- Web site directories will be created for each team by this week

- each team should have filled out this form by Monday, Oct 14th)
 - <https://bit.ly/cs147au24-team-name>
- start to get sites up there this weekend
 - should have all your work—not graded until mid-point check-in & near end of quarter

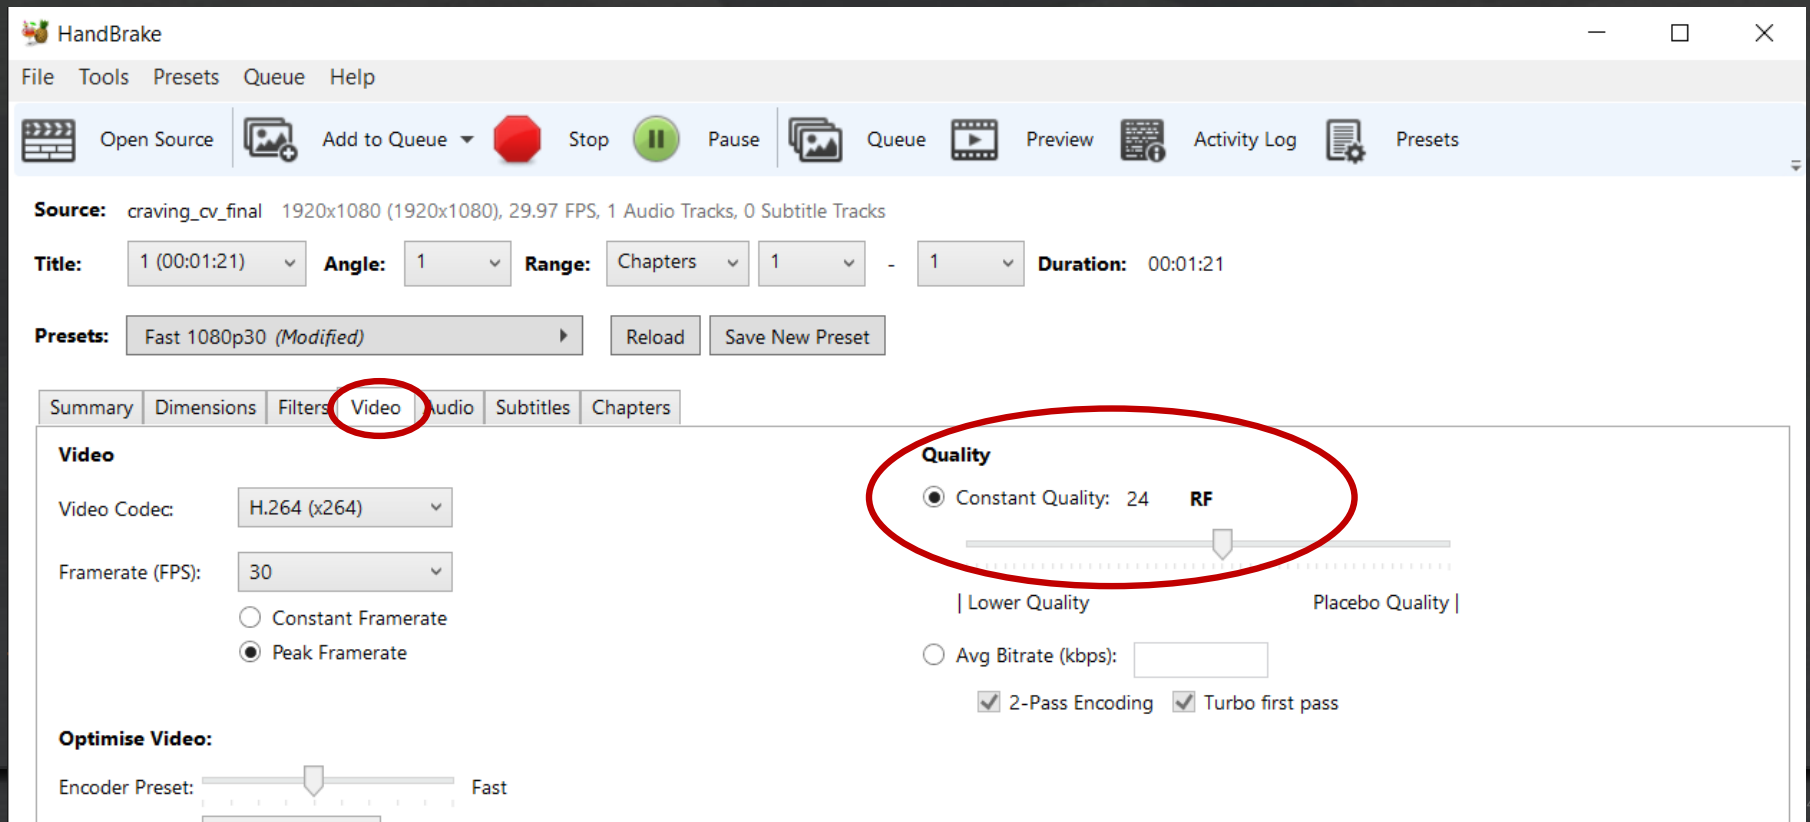

- CAs will send you your directory path/name on web.stanford.edu

Administrivia: Video Hints

- Under 2 minutes (90 seconds or less even better)
- Add credits at end
 - Team/project name
 - Your names (first name & last initial)
 - “CS 147 – Autumn 2024”
 - Will **not** count in your time limit

Administrivia

- Use *must* use handbrake to compress your video
 - It will take your video from 250MB-1GB down to ~50MB

Team Break

- Reflect on last week's assignment (~5-8 min)
 - what did you **like** about your teamwork?
 - what do you **wish** could be improved?
 - **share out** with each other
- This week's assignment (~15 min)
 - Get **greenlight from CA on solution + tasks**
 - work on your video storyboards/editing

TEAM MEETINGS

Constructing the Model

- Set a deadline
 - don't think too long - *build it!*
- Draw a window/phone frame on large paper
- Put different screen regions on cards
 - anything that moves, changes, appears/disappears
- Ready response for any user action
 - e.g., have those pop-up dialogs, etc. already made
- Use printer/scanner to make many versions

Tasks:

1. Open the EE app
2. Register and Log-in
3. Remove the minutes tile from your home screen
4. Place the "add \$10 Topup" tile to your home screen
5. Re-arrange the tiles on your home screen

USER NOTIFICATION.
INPUT FIELD.
PRESSABLE BUTTON.

Preparing for a Test

- Select your “customers”
 - understand background of intended users
 - use a screening questionnaire to get the people you need
 - don’t use friends or family
 - **start recruiting today**
- Prepare scenarios that are
 - typical of the product during actual use
 - make prototype support these (small, yet broad)
- Practice to avoid “bugs”

Conducting a Test

Four Roles

- Greeter – puts users at ease & gets data
- Facilitator – only team member who speaks
 - gives instructions & encourages thoughts, opinions
- Computer – knows application logic & controls it
 - always simulates the response, w/o explanation
- Observers – take notes & recommendations

Can combine

Who is Zuki?

Practice: Low-fi Prototype Testing

In a group of 3-4 people around you, you will test the low-fi prototype of Dishcovery app!

One will play user, one will play facilitator, and 1- 2 will play observers taking notes.

Share the critical incidents (both positive and negative events) from your test in Slack.

Note: If you are the user, remember to talk-aloud about what you are thinking as you navigate the prototype

Practice: Low-fi Prototype Testing

Dishcovery allows users to cook with foreign ingredients by learning more about their history and how they are consumed.

- Simple task: Scan an ingredient
- Moderate task: Learn about the ingredient
- Complex task: Cook with the ingredient

<https://tinyurl.com/dishcovery-lofi>

Evaluating Results From a Low-fi Test

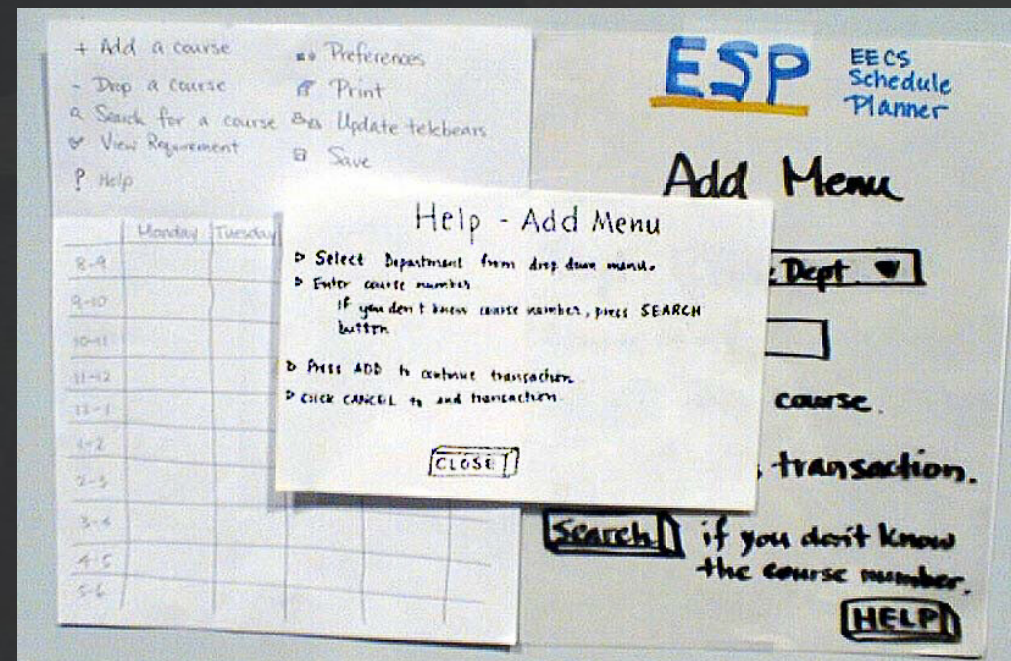

- High level questions about your design
 - does it **address the problem** you want to solve?
 - is this the **right realization** of your solution?
- Sort & prioritize observations
 - what was **important**?
 - lots of **problems in the same area**?
- Make changes & iterate
 - even ***iterate between tests***

Advantages of Low-fi Prototyping

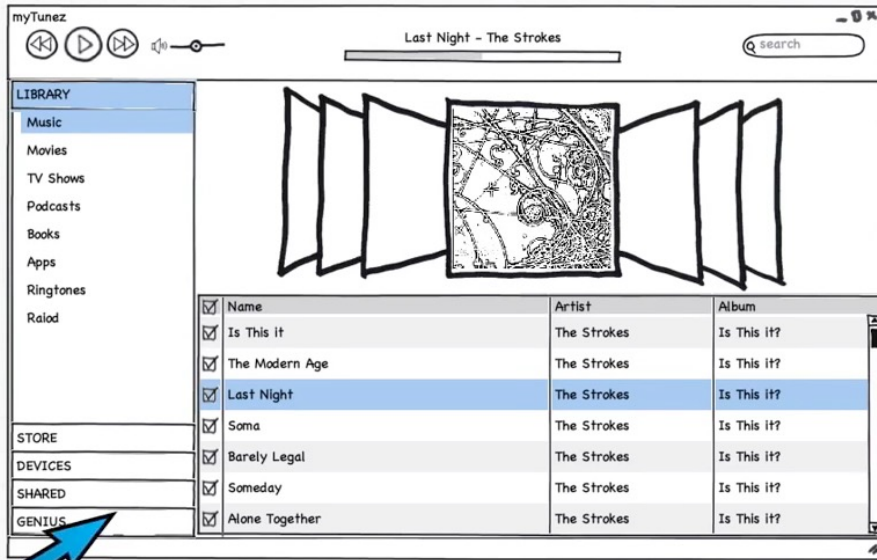

- Takes only a few hours
 - no expensive equipment needed
- Can test multiple alternatives
 - fast iterations
 - number of iterations is tied to final quality
- Almost all interaction can be faked (Wizard of Oz)

Problems with Low-fi Prototypes

- “Computer” inherently buggy
- Slow compared to real app
 - timings not accurate
- Hard to implement some functionality
 - pulldowns, feedback, drag, viz
 - ...
- Won't look like final product
 - some widgets/controls hard to recognize
- End-users can't use by themselves
 - not in context of user's work environment

Interactive Lo-fi Tools

Balsamiq Mockups

<http://balsamiq.com>

POP

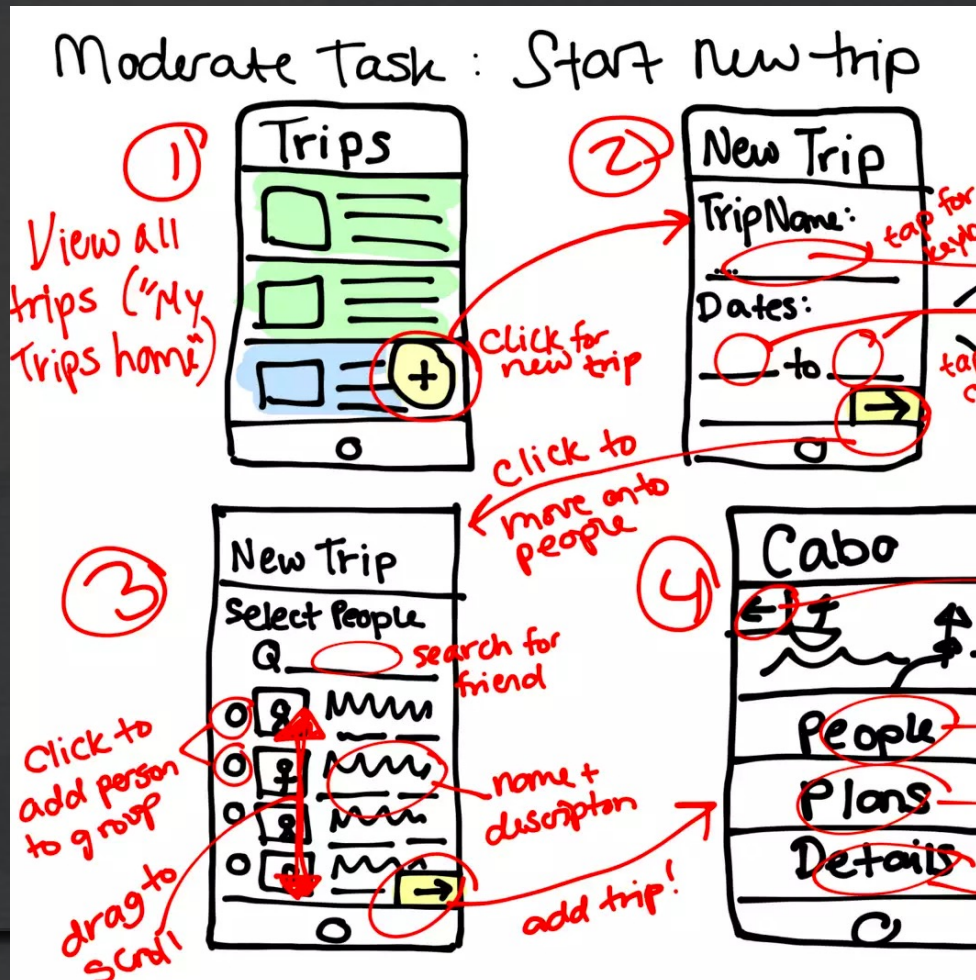

<https://marvelapp.com/pop>

Remote Testing of Low-fi Prototypes

1. Participant runs & records prototype (e.g., Balsamiq/POP) on their phone [hardest]
 - user records interaction by recording screen on iOS/Android
 - you record zoom meeting while participant speaks aloud
 - <https://uxdesign.cc/moderating-ux-research-with-zoom-1d4e89614277>
2. Participant runs zoom on their phone while you screen share prototype [moderate]
 - user taps on items & verbalizes aloud
 - *you control prototype & record meeting*
 - <https://uxdesign.cc/moderating-ux-research-with-zoom-1d4e89614277>
3. Participant hugs their laptop [easiest]
 - user runs your prototype (e.g., Balsamiq/POP) on their phone
 - you record zoom of their screen as *captured by their laptop camera*
 - <https://medium.com/@beparticular/were-still-hugging-our-laptops-8c7f22ed800e>

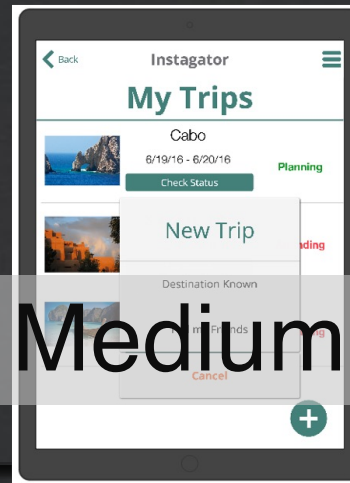

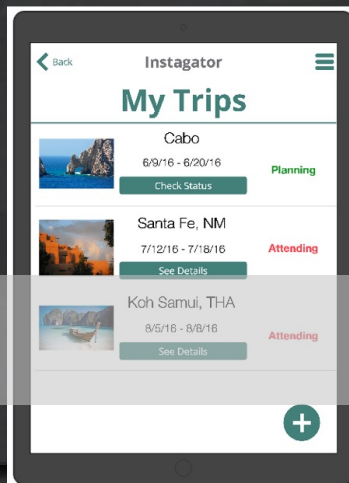

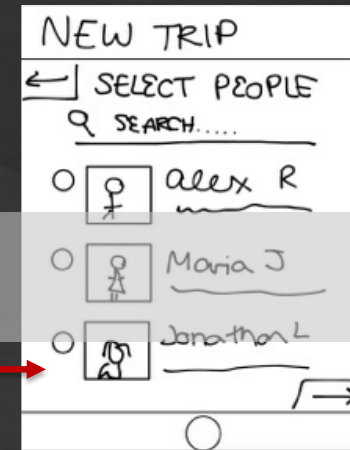

Fidelity in Prototyping: Instagator

Fidelity in Prototyping

Task 1: Take a Destination Poll

Medium-fi

Summary

- Prototypes are a concrete representation of a design or final product
- Low-fi testing allows us to quickly iterate
 - get feedback from users & change right away
