Demo

Future Work

Things we didn't get to

Fuzzy Bucket Item

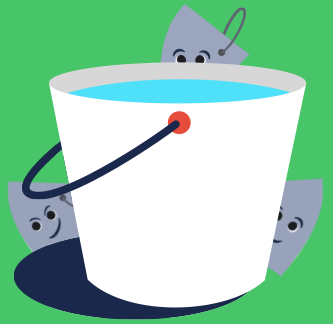
- Currently, bucket list items must be an exact match
  - all users need the same string, ex. “Walk on the Moon”
- We want to implement fuzzy matching for key phrases
  - “Travel to Paris” will match with “Visit France” and “See the Eiffel Tower”
- Will expand the number of users you can match with for a single activity

Other

- Create new communities
  - Integrate with Facebook groups and friends list
- Search
  - Communities
  - Other users
  - Bucket item autocomplete
- More focus on timeframes
- Private bucket list items

Summary

- Overall goal
  - Group motivation to complete your bucket list with people who share similar interests
- Three tasks
  - Create and manage your bucket list
  - Invite other users to complete activities together
  - Respond to invitations from other users
- Visual design
  - Primarily white background (iOS standard) with one primary accent color
  - Lots of pictures
  - Intuitive, aesthetically pleasing layout
- Backend
  - Allows for inter-device communication
  - Gives users the experience of communicating with real people
  - Potential for user data collection - better recommendations
- Release?



Thank you!
