## Value Proposition

Brainstorm with sound!

## Problem

People want to use technology to increase productivity, but do not want to spend massive amounts of time learning how to use it.

## Solution

Develop a tool that streamlines the brainstorming process using voice interaction, increasing both productivity and accessibility.

Future

## Task 1 (Simple)

Join a Brainstorm

## Task 2 (Complex)

Dictate ideas

## Task 3 (Medium)

Vote on favorite ideas

## WebApp:

Introduced joining a brainstorm session via QR

Reason – simplification of join process

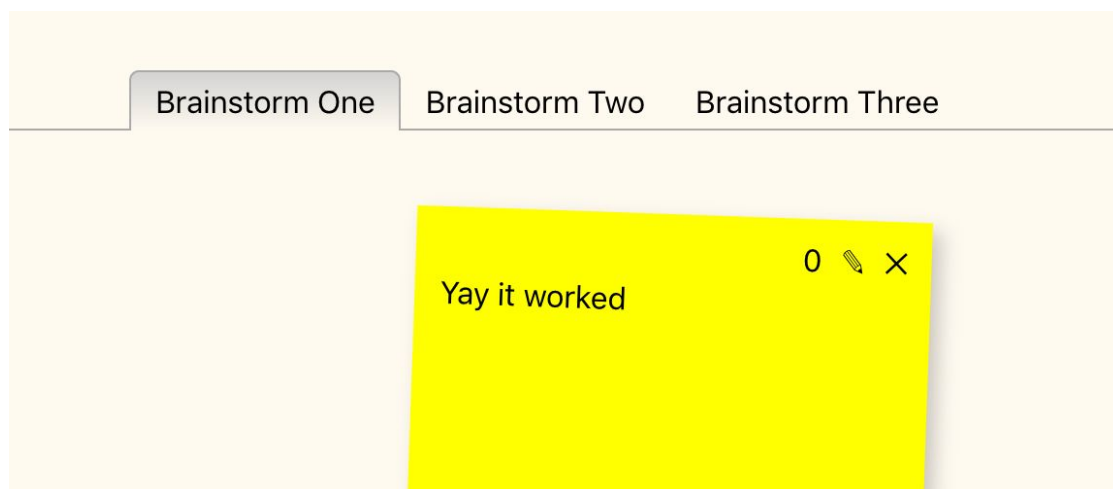

- No typing the session code
- Can open the app w/camera

## WebApp:

Multiple brainstorm channels

Reason – most teams do several brainstorms in one session

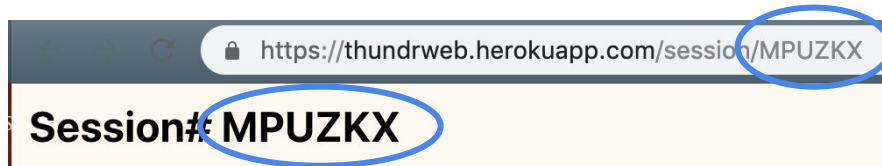

## WebApp:

### Persistent URL

Reason – teams want to revisit prior brainstorm

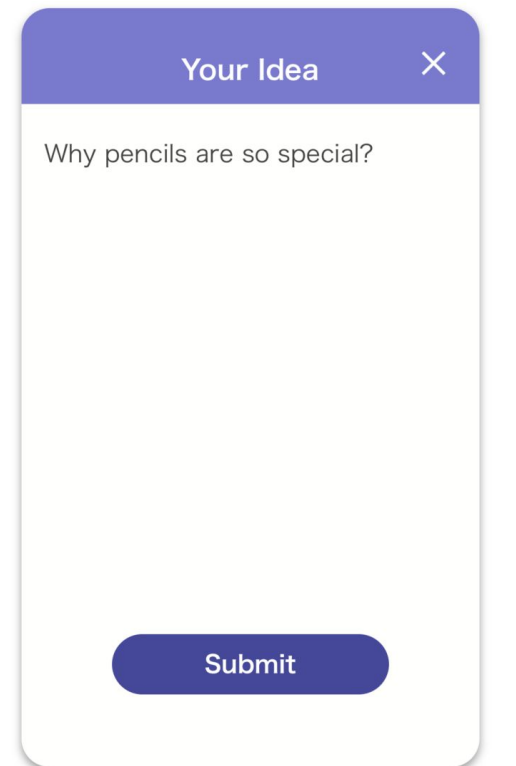

- Deep linking via URL
- Browser bookmark fully restores the session

## iOS App:

Switched dictation from remote (Watson) to local (IOS)

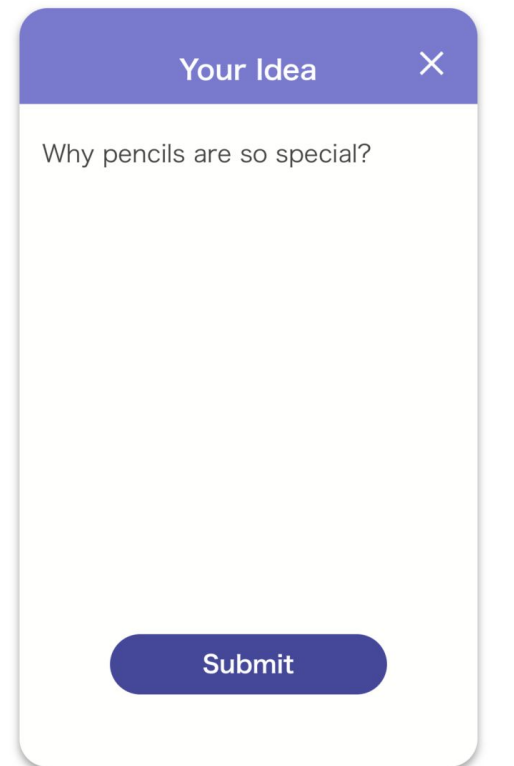

Reason – remote voice processing was frustrating  
and slow

## iOS App:

### Redesigned dictate idea screen

- Reason – More intuitive, less changes of screen. Easier to use and understand.
- Works better with quicker dictation, can now view words while dictating.
